The T.T. and the Grand Prix.

NEXT week's Tourist Trophy Races in the Isle of Man promise to provide the finest motor cycle races in history. With the trade supporting the event once again, the best riders in the country nominated as jockeys, twenty-two lightweights, and forty-three mediumweights in the Junior event on Tuesday, and sixty-eight in the Senior race on Thursday, the event attains increased importance. Enthusiasm already runs high, as many competitors are showing up conspicuously in practice on the Island. In each event there are two and four-strokes and single and twin-cylinder machines, but no four-cylinder or radial engined mounts appear. The single-cylinder predominates in Junior and Senior Races. On each race day, for the benefit of the thousands of motor cyclists who cannot witness the event, *The Motor Cycle* has again arranged for a series of telegrams to be despatched throughout the country, showing the leading positions at the end of each lap.

Undoubtedly, many of the machines which will compete are capable of speeds greatly in excess of those accomplished on the Manx course hitherto, and the contests promise to reveal to the world at large some of the results of the close attention paid to engine design during the war.

It is unfortunate that the races are not of a more international character. It would have been extremely interesting to have seen the latest British and American machines in a strenuous race, such as the Tourist Trophy, with the post-war productions of France, Holland, Belgium, Italy, and Switzerland.

On the 24th of next month, however, an opportunity will present itself for British motor cyclists to witness some of the Tourist Trophy machines in competition with the pick of the French motor cycle industry in the Grand Prix race. The comparative speeds of the British representatives in the Isle of Man and on the French course at Le Mans will provide data upon which the productions of the nations may be judged.

For the convenience of motor cyclists in this country desiring to attend Le Mans, *The Motor Cycle* has purchased a number of tickets for reserved seats in the grandstand, and has also a carefully compiled and classified list of hotels near Le Mans. *The Autocar* is rendering similar service to its readers for the great car race on the following day.

Only a limited number of tickets have been allocated to this and our sister journal, and those desiring to take advantage of the convenience should communicate with the Editor of either journal on the matter, which is referred to on page 703.

The Anglo-Dutch Trial.

THE Anglo-Dutch trial, which this year will be held in this country, occupies a unique position as an international contest. It is not a team trial in the generally accepted meaning of the term; it is a contest between a single team picked from the best riders in Holland and another representing Great Britain. Last year the Dutch team was the winner in its own country. Although the trial is in the hands of the Auto Cycle Union, the contest is not to be regarded as being between the A.C.U. and the Netherlands Club; it should be looked upon as a national affair—Great Britain versus Holland.

The formation of the British team is now in progress, and it is highly desirable that the Auto Cycle Union has in its possession a list of Great Britain's best riders who are available to compete. Many riders who are qualified to represent their country are so modest that they shrink from making applications themselves and, to overcome this difficulty, we suggest that club secretaries nominate them. We have sufficient material in this country to form a large number of excellent teams, and to form the British "fifteen" will not be an easy task. Nevertheless, too many names will be better than too few—and the more qualified men nominated, the greater will be the honour to those selected.

An Index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

By "IXION"

An Anniversary.

THE files of *The Autocar* record that in the last week of May, 1896, the first all-British motor cycle left the Humber works, and was tested at the Nunhead Grounds. No technical details are recorded—perhaps Messrs. Humber can supply a photograph? The machine was equipped with a Pennington engine, a power unit which was then a subject of great controversy. Its inventor claimed that it would burn paraffin without the aid of a carburetter, the oil being vaporised by a preliminary spark, after which a second spark exploded the resultant vapour. The machine reached a speed of nearly 40 m.p.h. at its *début*, though the reporter admits that it called for a little further tuning. As the Pennington cycle engine was air-cooled and finless, one imagines that after about half a lap the engine was on the verge of seizure!

Carrying Spare Bulbs.

I RECENTLY pointed out the absolute necessity of carrying spare bulbs when an electric lighting set is in use, and of a strong container in which such fragile spares will be safe. The Lucas people inform me that they now list a convenient metal canister, price 4s. 6d., which will carry one large and three small bulbs. A Leicester engineer writes that he has constructed a light metal case to bolt to the underside of a Brooks saddle. The latter notion seems rather sound. We don't want to carry such gadgets in our pockets. There is no room for them in our already overcrowded toolbags. The average handle-bar is pretty well loaded up with accessories. A permanent position on the frame, and preferably one of not too obtrusive a character, seems just to fit the case. One reader actually puts them in the peak of his cap, but I am precipitated over my handle-bar too frequently to risk such a position.

Close Ratio Gear Boxes.

MR. L. W. E. HARTLEY is a funny fellow. He is evidently something of a speed-merchant in his solo work, and presumably does not go in for the freak hill competitions, as he clamours for a gear box with "close" ratios; but he remains perfectly oblivious to the fact that there is already lots of choice in that line. To commence with, if he is indissolubly wedded to chain drive, I have no doubt that the Sturmey-Archer people and other gear makers would supply him with one of their special T.T. boxes, in which such a series as 4, 6, and 8 are obtainable. If he is not an out-and-out chain man what is the matter with the Rudge Multi and Zenith Gradua, which have survived because close-ratio men are still numerous? If he combines an occasional excursion into freak hill country with a love of burning up quiet highways, there are several four-speed boxes on the market, of which the best known is probably the always delightful A.B.C. In his general principles Mr. Hartley is dead right. There is nothing nicer than a dry day, a good road, and a gear (preferably of the belt type) which allows your willing engine to rev. at its pet speed, irrespective of load variations.

Some Nerve.

MYSELF a timid and imaginative rider, I was horrified by my inspection of the machines in the paddock at the last B.M.C.R.C. meet. One merchant calmly started out to chase 70 m.p.h. with a speedometer drive in position—geared off the front hub. Another was wooing the goddess of speed with a front brake all there. Bold men these, my masters!

Two Brakes on One Rim.

I ASK for information. Comparatively few riders enjoy much experience of a braking system which is not uncommon nowadays, viz., two shoes operating respectively on the inside and outside of one and the same belt rim. My own experience testify that the combination is not too good. What you make on the swings, you lose on the roundabouts, so to speak. I am rather a thick-head. All the good things you see in these columns are cribbed from somebody. I do not see any reason why this brake system should not work; but I have not found that it does. Can somebody please explain?

The Wizard of Shoreham.

THE name of Mr. H. R. Ricardo commands such respect in the technical world that the rivals of the Triumph Co. will feel very anxious until the end of lap one in the Senior T.T., and even the Triumph inclination to regard their side-by-side valve engines as their first string has by no means allayed the general nervousness. Mr. Ricardo is one of the most

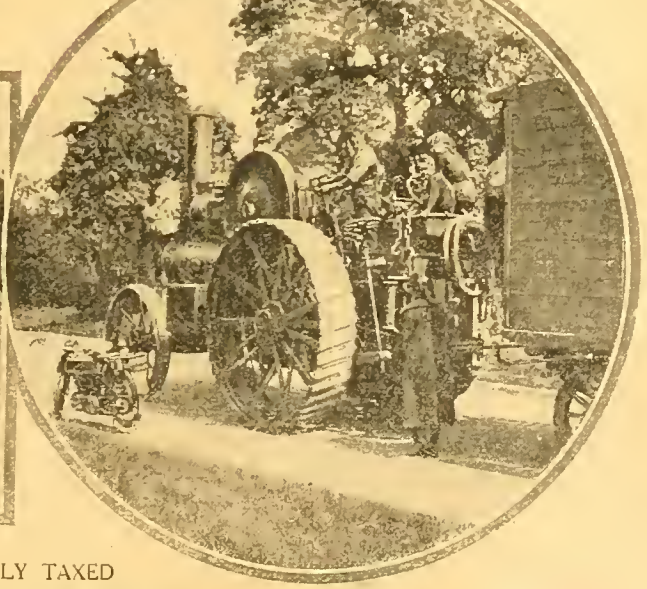
Ixion's "MOTOR CYCLE REMINISCENCES" have lately been published in book form, price 6s. 3d. post free, from "The Motor Cycle" Offices, 20, Tudor Street, E.C.4.

Occasional Comments.—

patient and ingenious research workers in the sphere of internal combustion engines. In his laboratory at Shoreham no guesswork is permitted. The most laborious and expensive tests are made to settle every doubtful item in connection with compression ratios, valve design, piston design, the shape of combustion chambers, the qualities of various fuels, and the like. Occasionally he purchases a standard proprietary engine, conducts sundry experiments with it, and later on indicates to its indignant designer how a few modifications will give a marked increase in horse-power with a marked decrease in consumption. More often he may be found busy on some weird test unit of his own construction, so constructed that almost every factor of design is adjustable, whilst every aspect of its performance is meticulously recorded by a battery of instruments. No bigger or more experienced brain has ever concentrated on the design of a motor cycle engine; and no matter how the Triumph-Ricardo unit fares in the T.T., it should ultimately form the basis of a very delightful 'bus.

The Manx B.S.A.

IN one respect the B.S.A. has the vantage over all the other new machines for the T.T. Its rivals may have specially designed engines; the B.S.A. has a specially designed frame. Those of us who have seen the Scott take its corners at speed in the Island recognise how the road-holding qualities of the machine give an engine its chance. I believe I am right in saying that the Scott has never yet won a race at Brooklands, but no 'bus is more dreaded in the T.T., and its competitors will be nervous on June 16th till all the Scotts are down and out. Its frame gives the engine—which is not a type lending itself to gigantic p.m.—a splendid chance to outpace machines which would leave it on Brooklands. The B.S.A. designers have wisely taken these facts to heart; and their new racer is obviously designed to be worthy of their new engine, and to hold the road at the fantastic speeds of which the latter is capable. Victory in the 1921 T.T. may well be a matter of seconds between half a dozen men; and the rider who has a road-holding 'bus beneath him will profit accordingly. Low centre of gravity and a frame which simply can't whip are great matters on these occasions.



Where is the Rudge?

THE absence of the Rudge is one of the great disappointments of this year's race. I say "absence," for though I have not overlooked J. O. Groves's entry, the factory is evidently lying low. We all love the racing Rudge. In the years when the American entry used to depress patriots, the Rudge would suddenly make a meteoric entry with a team of comparatively unknown men, and either mop up the field in the most masterful fashion or at least threaten to do so. They seemed to have an inexhaustible supply of crack youngsters, and their "spotter" was a bigger expert in his line than the team-builder of any First League soccer club. Mr. Holroyd tells me that since the price of the Rudge Multi was pulled down to £85, the firm have had no time to devote to racing. Anyhow, if the Rudge "comes back" in 1922 it will find its old feats are not forgotten in the Island.

Other Absentees.

IT is also a vast pity that another talented designer will be unrepresented in the T.T. I refer to Granville Bradshaw. Last year Sopwiths were far too busy supplying eager customers, who would pay any premium in June, 1920, to get delivery. Then the bottom fell out of the market, and so we shall never have the chance to see a team of A.B.C. engines, tuned up by Emerson, screaming round the Manx course. This year we scarcely hoped for the new oil-cooled Bradshaw-Zenith to be ready in time. Perhaps, next year . . . ?

WHY PRIVATE MOTORISTS ARE HEAVILY TAXED

In a few minutes a heavy tractor, which is subject to an annual tax of £28, will do damage to the roads which costs hundreds of pounds to repair. Here is shown a newly-made road between Stafford and Rugeley with a deep furrow cut into it. A reader who photographed it reports that the furrow was, in places, sufficiently deep to unseat a solo rider, and that he followed the trail for several miles before overtaking the monster that had caused the damage—a heavy steam tractor towing a train of circus vans.

Road Tests of New Models

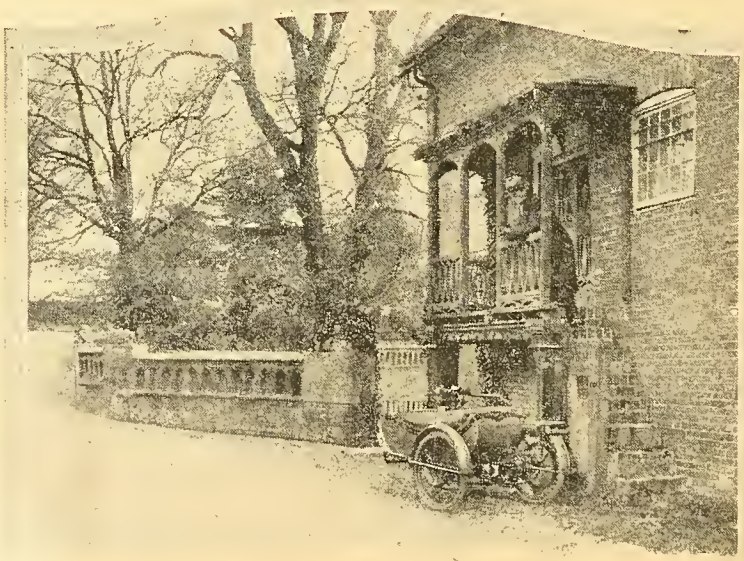
THE 3 h.p. IVY SIDECAR.

IT is not so very long ago that motor cyclists were accused of cruelty to machinery if they attached a sidecar to a 500 c.c. motor cycle. The introduction of the change speed gear, however, soon showed the popular 3½ h.p. sidecar to be a go-anywhere mount. Then the lightweight came into its own as a solo mount, and, as it is man's nature to pine for company, it was not long before he discovered that these small machines were capable of propelling a sidecar. This led to all kinds of adaptations—some entirely unsuitable and unfair to the manufacturers of the motor cycles, but it revealed the interest in small, light, economical and low priced outfits, and for several years certain makers of two-stroke lightweights have offered models specially built for light sidecar work. Among these Messrs. S. A. Newman, the manufacturers of the Ivy motor cycle, have given the proposition real consideration.

The result is the Ivy model K, which has been designed throughout as a sidecar outfit, the sidecar lugs being integral with the frame, and the chassis specially designed for the machine. In addition, all-chain transmission forms part of its specification, an important point considering that most outfits of this character depend upon a ¾in. belt.

True the sidecar body is small, but it cannot be confused with the more usual slipper type of the "sporting" category. In fact, except for its size, the Ivy and sidecar may be said to resemble some of the big twin outfits, and there is ample room for a passenger of the average size.

One's first impression of the machine is that it is a neat little toy, but even the "big twin" sidecarist loses the "toy" idea after a road trial. Engine size does not entirely govern average speeds, and while the great reserve of the big twin and even the 4 h.p. single is absent with a machine of the Ivy class, the man who usually "cruises" on his journeys, rather than makes them a series of speed bursts, finds that the average speed possible is very little below that at which more powerful machines are used.



The present writer regularly does a certain twenty mile circuit, with his wife in the sidecar. The machine usually in commission is an 8 h.p. twin, but sometimes

SPECIFICATION.

ENGINE: Ivy 75 × 79 mm. (348 c.c.)

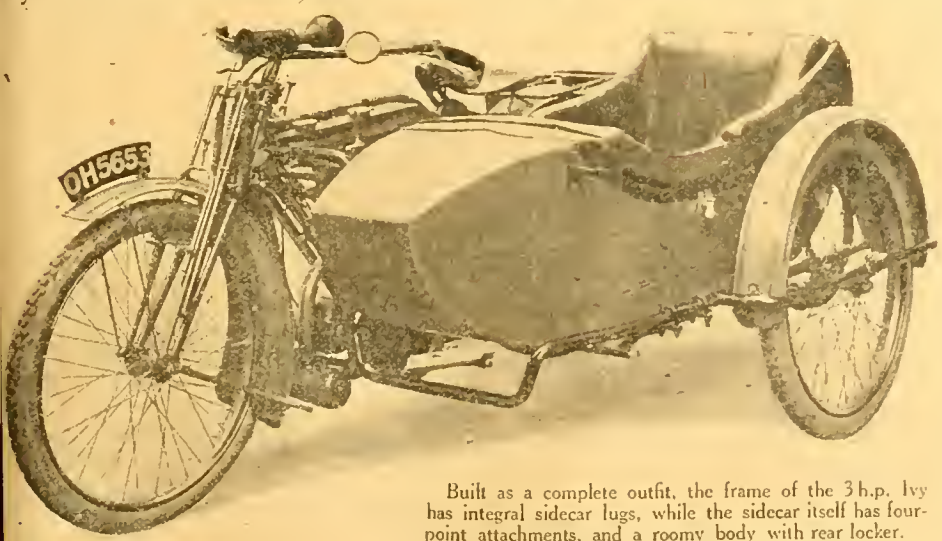
LUBRICATION: Drip.	*GEAR BOX: Sturmey 2-sp.*
MAGNETO: E.I.C.	*TRANSMISSION: Chain*
CARBURETTER: B. & B.	*WHEELS: 26 × 2.*
FRAME: Rigid.	*FORKS: Ivy.*
WEIGHT: 185 lb.	*PRICE: £110 with sidecar.*

Due to its light weight, the speed of the Ivy sidecar is practically as high as that at which the average sidecarist usually tours—in fact, in many ways the machine approximates in performance to that of most pre-war "3½" sidecar outfits.

Road Tests of New Models.—

a 4 h.p. single-cylinder outfit is used. These journeys are evening jaunts for pleasure, and the speeds are set accordingly. It may convey an idea of the capabilities of the Ivy to know that this little outfit has covered the same journey in the same time as the larger machines, and the gear changes have been no more frequent. The route is over give and take ground of the typical Warwickshire nature, and includes two hills which even the big twin will not take on "top" unless the speed is kept up. On these rises the Ivy engine maintained its power, and without any attempt to "rush them," reached the summits on top gear, *i.e.*, 6½ to 1, in good style.

Ideal for Moderate Speeds.



From this it may be deduced that any one who requires a machine for cruising the Ivy may be regarded as quite suitable. It is when speeds above 30 m.p.h. are required, or it is necessary to have a family sidecar, that larger engines become necessary. Up to the speed mentioned the Ivy sidecar is all that can be desired. The "big twin" man feels that he is demanding too much from the little engine, but it seems to like it. The only criticism we have to make has regard to running light. The particular Ivy we tried had not the slow tick over nor the silence one obtains with a big twin—in fact, it is noisiest when running on light loads, when there is a certain amount of four-stroking, with consequent louder exhaust. Under way, however, the exhaust note is no louder than the average machine, and is certainly less unpleasant than some four-strokes—in fact, the hum of the Ivy engine is almost musical.

At no time is engine vibration at all noticeable: its smooth running, indeed, reminded us of a well balanced flat twin.

A Real Double-purpose Mount.

It makes a useful dual-purpose mount, for by detaching the sidecar, it becomes a solo machine capable of scaling mountains, or a long week-end run at speed.

So far as the riding position is concerned, while most comfortable for sidecar driving, a little lower saddle would be a distinct advantage when the machine is used as a solo mount. It is, of course, impossible for a motor cycle to be offered with various size frames, as is the practice with pedal cycles, and therefore a compromise which will suit both short and tall riders is a necessity. In some cases the compromise slightly favours the tall rider: in others the short rider has the advantage. The Ivy is an example in which the tall rider is more favoured.

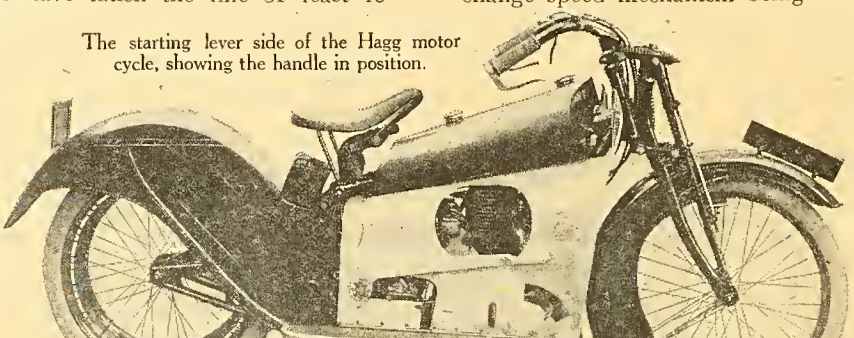
Built as a complete outfit, the frame of the 3 h.p. Ivy has integral sidecar lugs, while the sidecar itself has four-point attachments, and a roomy body with rear locker.

Altogether, the Ivy sidecar outfit impressed us as no other machine has done, and left us with a desire to own a similar vehicle. We feel sure that a greater degree of silence when running light could be obtained by a change of jet size, for a sister Ivy, but ridden solo, recently in our hands, was everything that could be desired in this respect.

Finally, it is comfortable to drive. Most light sidecars are prone to throw one about on indifferent roads. The Ivy runs as sedately as machines of twice its weight.

SECRETS OF POWER.

OFTEN it is, perhaps recklessly, stated by people who do not know, that cars of well-known make which do well in races at Brooklands, for example, are quite unlike the standard models, and that considerable alterations in design are introduced. The remarks of a number of racing enthusiasts who have favoured *The Autocar* with their views and experiences, however, tend rather to disprove this notion. Indeed, it would appear that with the exception of special racing cars built for special events, such as the Grand Prix or the Tourist Trophy races, the astonishing performances obtained at Brooklands race meetings are due very much more to painstaking attention to the perfection of details than to anything else. That this attention to detail cannot be given to standard models is due simply to the fact that it involves an immense amount of individual hand work, which if it were applied to each and every standard touring car before it left the works, would greatly increase the price at which the car could be sold to the public.



Nevertheless, the racing practice of to-day becomes the standard practice of to-morrow, for when racing shows that certain features are desirable, the attention of works engineers becomes concentrated upon commercial workshop processes which will give results equivalent to those obtained by hand work, but at a more reasonable cost.

IS DESIGN STAGNATING?

Some Unconventional Motor Cycles which go to Show the Trend of Modern Design.

THE fact that fully 90% of the world's motor cycles follow a common practice may be explained by two reasons: either conventional design has been proved by time to be right, or the majority of makers have taken the line of least resistance and been guided by the more or less successful efforts of the pioneers.

It has often been remarked that the development of the motor cycle industry has been somewhat akin to a game of follow-my-leader. This is true to a certain extent.

The starting lever side of the Hagg motor cycle, showing the handle in position.

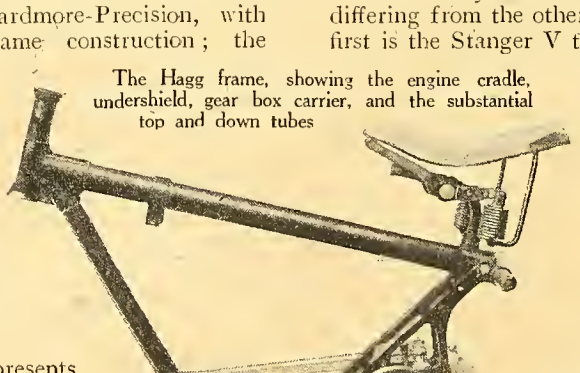
There is, however, another side to the question. While many will say that the present-day motor cycle is nothing but a machine evolved from the pedal cycle, and its engine only a slightly modified form of the types of twenty years ago, these same critics are usually the first to condemn a machine *because it is unconventional*. Any article differing from accepted ideas must be unconventional.

A careful consideration of motor cycles produced since the war will show that, far from design stagnating, there is every evidence that long-existing ideals are gradually materialising. Take, for example, the Pullin motor cycle with its pressed steel frame and enclosed mechanism, the Beardmore-Precision, with its combined tank and frame construction; the Reynolds runabout; and the many spring frame machines now available.

We have before us particulars of several recently introduced designs of striking originality. All of them differ in some respect from what may be described as conventional practice.

Hiding the Mechanism.

The Hagg motor cycle represents a type of which in later years we may see a great deal, *i.e.*, the machine which has its mechanism concealed as it is on a car.



We published the first description of the Hagg some twelve months ago; since then, however, several alterations have been made not only in its construction, but as regards its manufacture. The Hagg is now actually on the market, and is being manufactured in the village of Park Street, near St. Albans, by Messrs. Tayler and Haytor.

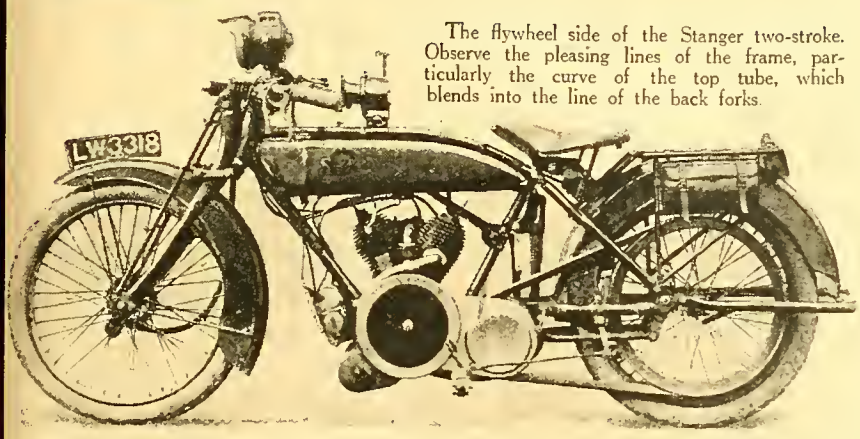
A glance at the accompanying illustration will show the construction of the novel frame, the top tube of which is 2in. in diameter and the down tube 1½in. A Burman two-speed gear box is foot-operated, the change speed mechanism being hung on to a channel steel bracket extending from the after end of the top tube to the engine cradle.

The rear wheel is carried in a separate channel steel frame, and the rear mudguard, which is naturally suitably constructed for the purpose, is sufficiently sturdy to serve as support for an auxiliary seat behind the driver.

On a motor cycle of this character the problem of obtaining accessibility is difficult of solution, but the Hagg design overcomes this by hinging the two shields.

The 350 c.c. Precision engine has an undershield which forms part of the frame.

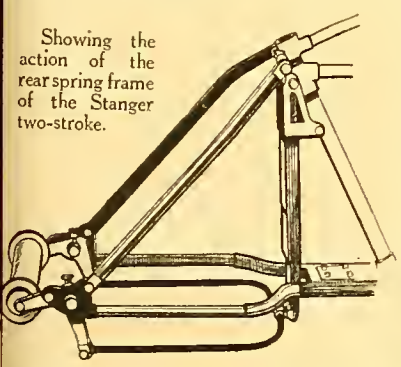
The Hagg frame, showing the engine cradle, undershield, gear box carrier, and the substantial top and down tubes



Two Twin Two-strokes.

Multi-cylinder two-stroke engines, with the exception of the Scott, are somewhat of a rarity, and therefore come into the category of machines that depart from the conventional. We are able to illustrate two new motor cycles having this type of engine, each differing from the other and also from the Scott. The first is the Stanger V twin, which was exhibited at the 1919 Olympia Show, and which is now on the market. It possesses several novel features of design; the cylinders (70 × 70 mm. 538 c.c.) are set at 45° which, with cranks set at 135°, gives even firing. There are two separate crank chambers, and their castings are divided horizontally.

Not the least interesting portion of the machine is the frame which has particularly graceful lines. The rear portion, including the gear box bracket, and the greater part of the chain stays, is a channel steel stamping. The rear wheel is carried by bell cranks pivoted at the rear of the chain stays, a stirrup extending to the lower extremity of a vertical leaf spring mounted on the saddle tube controlling their movement.



The Stanger is made by the Stanger Engine Co., 13, Steele Road, Tottenham, London, N.17.

Is Design Stagnating?—

The flywheel side of the Stanger two-stroke. Observe the pleasing lines of the frame, particularly the curve of the top tube, which blends into the line of the back forks.

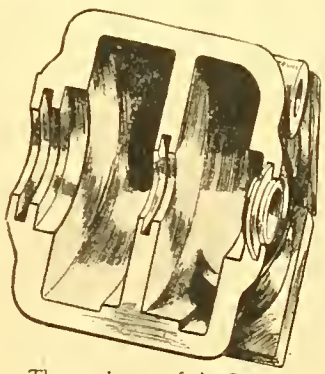
It was on the occasion of the M.C.C.'s trial last autumn that we first saw the interesting B. and D. motor cycle, the motive power of which is a 4¼ h.p. Levis flat twin two-stroke engine, mounted in a duplex frame. In designing the machine, Mr. W. Burnside, B.Sc., aimed chiefly at simplicity, efficiency, and light weight combined with strength. The machine has been well tested on the road, runs smoothly, gives ample power, and an excellent turn of speed, despite the fact that the engine has not been specially tuned. The acceleration is claimed to be particularly good, and the hill-climbing powers are excellent. The drive is by chain to a Burman two-speed gear box incorporating clutch and kick-starter, and thence by belt to the rear wheel. Lubrication is by drip feed to the main bearings. The tyres are 650 × 65 mm.

Showing the action of the rear spring frame of the Stanger two-stroke.

This machine, which was built by Mr. W. Burnside and Mr. R. C. H. Darby, Cotleigh, West Wickham, Kent, was originally designed to be placed on the market, but Mr. Burnside has been forced to abandon his idea owing to quite exterior causes.

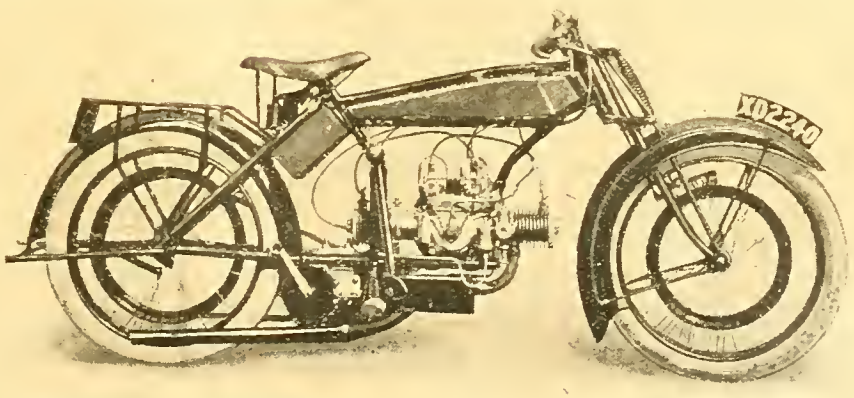
A New U.S.A. Flat Twin.

Another motor cycle which differs from general practice is the American flat twin lightweight. First, it is a chain-driven single-geared machine, and secondly, the camshaft, which is also the transmission countershaft, rotates at a speed of 1 to 6 of the crankshaft.



A multi-disc clutch is fitted at the extreme off side of the countershaft, and the final drive is by chain, only a slight further reduction in the gear ratio being necessary. No gear box is fitted. Also, driven by the cam and countershaft, a slow speed mechanical oil pump delivers oil at intervals to the main bearings. A hand pump is provided for emergency use only.

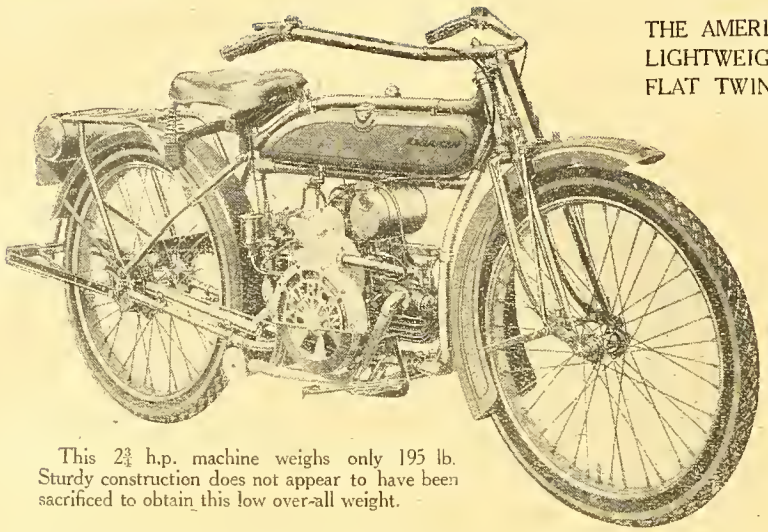
It is unusual on an American machine, but none the less satisfactory, to find that a British carburetter has been adopted as standard. 120 to 140 m.p.g. is claimed from the instrument in question—a Cox-Atmos—which, as the engine has a capacity of 348 c.c. (58 × 66 mm.), is rather remarkable.



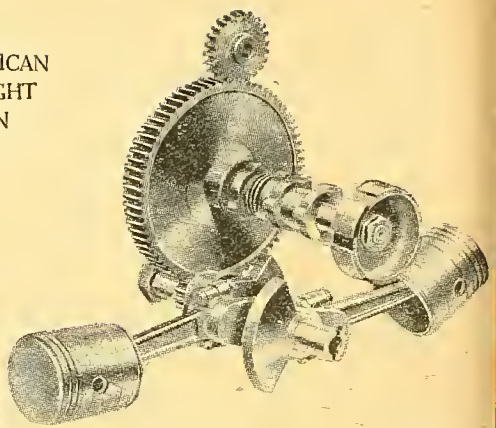
All the frame parts and the front forks, which follow the usual American practice, are sturdily constructed. The weight of the machine is only 195 lb. The manufacturers are the American Motor Cycle Manufacturing Co., Louisville, Kentucky.

Internal Expanding Front Brakes.

As regards minor details of motor cycles, no part has received so much adverse criticism as the stirrup type front brake. Several manufacturers are now discarding this type in favour of contracting band brakes, and also by abandoning the front brake altogether, two brakes being fitted on the rear wheel. It is, therefore, not surprising that, although only on the market a few months, the Webb front hub and brake (illustrated overleaf) has already been adopted by a number of manufacturers, including the makers of the Velocette and Francis-Barnett. The brake part works on a simple cam-operated internal expanding ring, and is controlled by Bowden wire from the handle-bar. It is strongly made and well finished. H. C. Webb and Co., Ltd., Century Works, Aston Brook Street, Birmingham, are the makers.



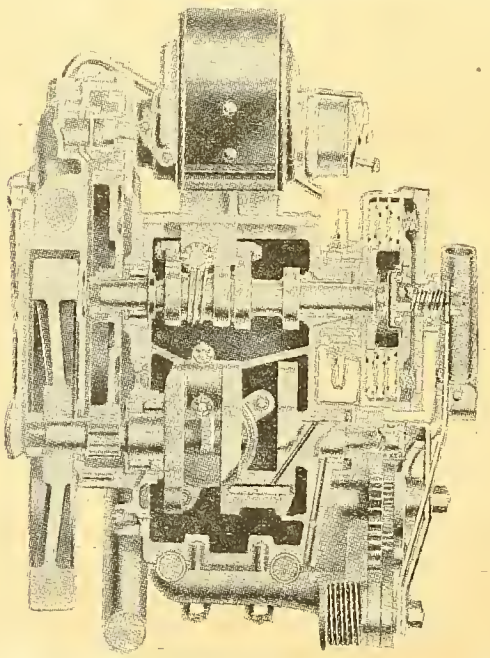
The crank case of the Stanger V twin two-stroke engine.



Kick-starter side of the B. and D. motor cycle, showing single chain drive for the two magnetos.

Is Design Stagnating?—

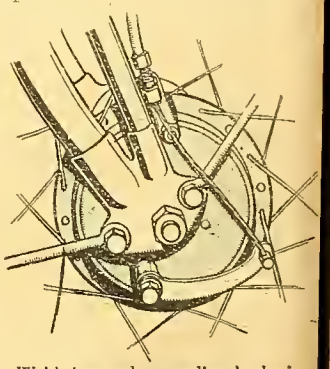
THE AMERICAN LIGHTWEIGHT FLAT TWIN



This 2¾ h.p. machine weighs only 195 lb. Sturdy construction does not appear to have been sacrificed to obtain this low over-all weight.

Pistons, connecting rods, crankshaft, and the combined timing and transmission gear of the American flat twin engine, well illustrating the simplicity of this unorthodox design

Everything considered, it is not fair to say that motor cycle design is stagnating, even on the evidence provided by the examples of new designs quoted here. There are many others which, for various reasons, we are unable to describe at the present time. One is a new twin with the engine set across the frame; a second has for its object the same general idea as the Pullin and the Hagg, *i.e.*, to ensure cleanliness to the driver;



A "slow moving" camshaft on the American flat twin Cross section, showing the low speed mechanical oil pump and the oil grooves to the chief bearings, also the dry plate clutch and kick-starter operating mechanism

a third is a four-cylinder sidecar machine which, we are told, gives over 80 m.p.g.

Motor cycle design is not stagnating, but the present time is unpropitious for the introduction to a cautious market of anything of which the advantages have not been proved.

We are a conservative people, and the pioneer has tremendous resistance to overcome in introducing anything which differs greatly from the "usual." Abroad the same prejudice against unconventionality in design does not exist, and consequently there have been many new types of motor cycles produced on the Continent.

Notwithstanding, the British motor cyclist is open to be convinced, and any manufacturer of an unusual type of machine has only to enter the reliability trials to prove any good points he may claim for his product. The present-day motor cyclist will not step back, however. If, by purchasing an unconventional machine, he can obtain a decided advantage, he will consider it provided it will give general satisfactory performance in every other respect. In other words, unconventionality must be justified and its justification proved

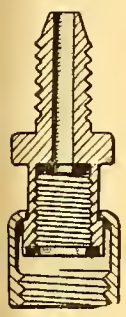
Webb internal expanding brake in the front hub.

NEXT THURSDAY!

THE MOTOR CYCLE

T.T. AND SUMMER NUMBER

Special articles and illustrations of world-wide interest to every motor cyclist, whether soloist, sidecarist, tourist, competition rider or racer, are in preparation.



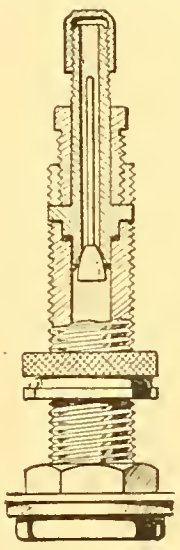
On sale on the day of the Senior T.T. Race, it will form a comprehensive guide to the blue riband of the motor cycle world, including the latest news from the course, details of the competing machines and practice lap times.

THURSDAY, JUNE 16th.

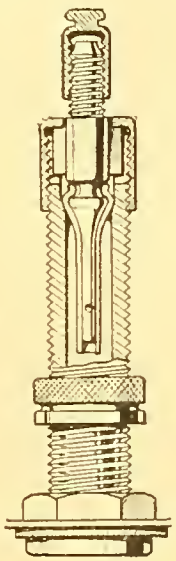
SOME NOTES ON TYRE VALVES.

A Little Fitment Often Neglected, yet Fulfilling an Important Function.

IT is seldom that one is troubled with leaky tyre valves, yet this fault can, on occasion, be a source of much annoyance. A slow leak at the valve sometimes takes a lot of finding, for it has a habit of disappearing when under test. There are three types of valve to be found on motor cycle tyres: the pin valve, more often used on cars; the cycle valve, perhaps the commonest of all; and the Schrader or American type valve.

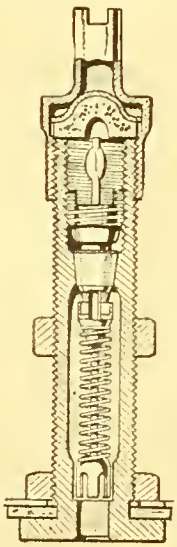


Adapter enabling a motor cycle pump to be used with the Schrader valve.



The first is now only found on a few motor cycle tubes of Continental origin, and so may be dismissed in a few words. Briefly, it consists of a pin with a rubber head, the head being held on its seating by the pressure within the tyre. This valve gives good results provided that the air pressure is kept reasonably high, but is apt to leak during the process of inflation, or if the tyre is partially deflated. To obtain the best results it is only necessary to keep the valve head and seat scrupulously clean.

The normal cycle valve, wherein a rubber tube covers a hole in the central member, and thus acts as a non-return valve, is well known to all cyclists and motor cyclists; it gives excellent results in practice, and spare rubbers are easy to carry and easy to fit. Cleanliness is essential, and the outer part of the tube should be well covered with French chalk so as to prevent sticking. If, however, the tube should stick to the body—a not uncommon occurrence—the heat of a match held against the outer metal body will free the tube in a few seconds.



Becoming increasingly popular is the Schrader valve, in which a narrow fibre valve is held up to its seating by a light coil spring, assisted, of course, by the pressure in the tyre. The whole valve and seating are easily detachable and instantly replaceable, since the outer end of the valve cap is formed in such a manner as to act as a removing tool. The valve itself is carried on a pin, and has a peculiar advantage in that the pressure in the tyre may be accurately tested by means of a Schrader pressure gauge. This gauge, when screwed on in place of the pump connection, raises the valve from its seat, and allows the air pressure in the tube to act on the internal mechanism of the indicator. It is not generally realised that the normal pressure gauge attached to the pump registers the pressure on the downward stroke of the pump, and this may be appreciably higher than that in the tube. Few motor cyclists worry about tyre pressure, and most are content to judge the correct inflation by eye or feel, but correct inflation undoubtedly prolongs the life of a tyre and increases the comfort of the rider.

The pin type of tyre valve.

Type of cycle valve now commonly in use.

Section of the Schrader valve.

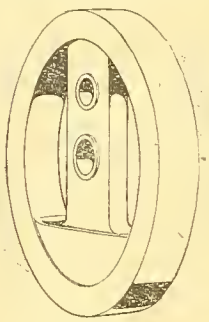
Standard cycle pump connections are not suitable for the Schrader valve, but a simple adapter, suitable for either Schrader or cycle tyre valves, is now obtainable, and the thread of the Schrader outer body will fit standard car pump connections—a feature which is most useful when a garage foot pump is handy.

THE MOTOR CYCLE GRAND PRIX.

Arrangements whereby Readers of "The Motor Cycle" may Obtain a Limited Number of Reserved Seats in the Grandstand to view the Classic French Race.

ON Sunday, July 24th, the classic French Grand Prix race for motor cycles will be won and lost, and it would appear that the event will be a great success. Anticipating this, *The Motor Cycle* has made arrangements with the organisers for a section of the main grandstand to be reserved for our readers.

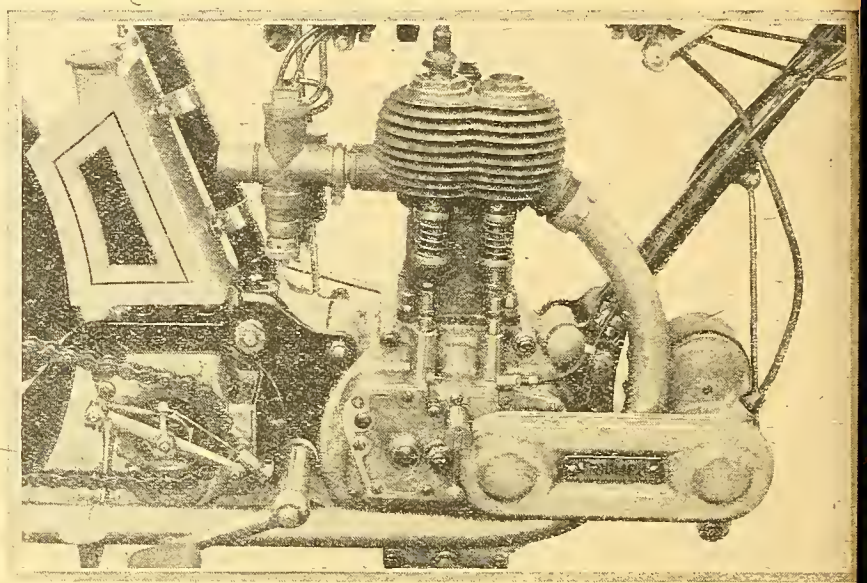
The positions secured give a good view of the main score board and of the course. The price of the seats is 10 francs each, but as the number is limited, application should be made as early as possible to the Editor, *The Motor Cycle*, 20, Tudor Street, E.C.4, or Hertford Street, Coventry.



By these arrangements readers of *The Motor Cycle* are not only assured of some of the best positions in the grandstands, but they are saved the trouble of having to write and transmit money aboard or to purchase tickets at the last moment.

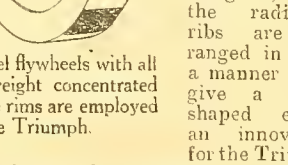
As regards hotel accommodation, visitors from England are advised to stay in the towns and villages adjacent to Le Mans, and, by the courtesy of the Automobile Club de l'Ouest de la France, a list has been secured of all the hotels within easy motoring distance of Le Mans in which accommodation is at present available. These lists are obtainable on request to the Editor.

THE SIDE-BY-SIDE VALVE T.T. TRIUMPH.



A Long-stroke Sports Model of 498 c.c., with 80 5 × 98 mm. Engine.

AS mentioned last week, the Triumph Co. will use two different types of engine in the Senior event. Both these engines will be mounted in similar frames, and outwardly the side-valve models closely resemble the Triumph-Ricardo o.h.v. machines described in the last issue. We are now able to give particulars of the new 500 c.c. side-by-side valve engine.



Steel flywheels with all the weight concentrated in the rims are employed on the Triumph.

Having a bore of 80.5 mm. and a stroke of 98 mm., the cylinder is a particularly clean and neat casting. The valve ports are well designed, and the radiating ribs are arranged in such a manner as to give a pear-shaped effect, an innovation for the Triumph Co., and one which immensely improves the appearance of the engine.

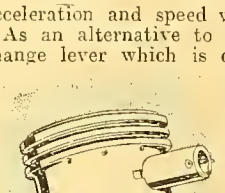
At first glance there is much in the Triumph T.T. engine similar to the standard 4 h.p. unit; closer scrutiny, however, reveals considerable external differences, especially in the disposition of the radiating fins. Very neat, also, is the auxiliary heel gear-change pedal.

A light cast iron piston with a considerable "waist" carries two rings and a light hollow gudgeon pin. On standard lines, the H section connecting rod is

A steel roller is interposed between each cam and the light channel steel rocker arm.

somewhat stiffer than usual, and is fitted with a roller bearing big end.

All the weight is concentrated in the rims of the steel flywheels, the centre web being cut away everywhere except for the balance weights and a bar to carry the mainshaft and crank pin.



In addition to a flat base crank case, which contains a small oil sump, the timing gear is new, two separate camshafts being employed with a rocker arm interposed between the cams and tappets. These rockers are milled out to a channel section, and a hardened steel roller takes the thrust of the cam in order to reduce friction. The Triumph decompressor is retained for starting purposes, and a B.T.H. or M-L magneto will be used. Mixture is supplied by the new T.T. Amac carburetter.

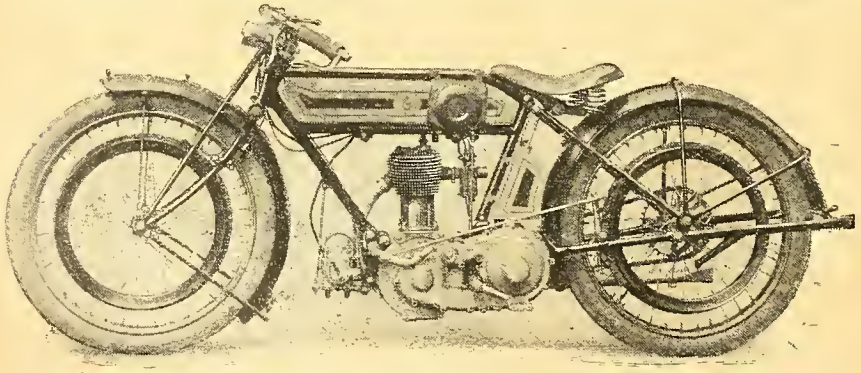
Two-speed Gear.

Transmission is by $\frac{5}{8} \times \frac{1}{4}$in. roller chain throughout, the front chain being entirely enclosed in an oiltight aluminium casting.

The Triumph will be one of the few machines in the Senior T.T. which will be fitted with only two speeds, but the two-speed box is an excellent piece of work, and, assisted by a plate clutch and a modified form of the Triumph spring drive, it is expected that the necessary acceleration and speed will be obtained.

As an alternative to the normal gear change lever which is carried well forward of the tank, a foot-change mechanism has been designed, but for the race the Triumph team will retain the hand control.

Two piston rings and a waist of considerable depth are features of the T.T. Triumph pistons.

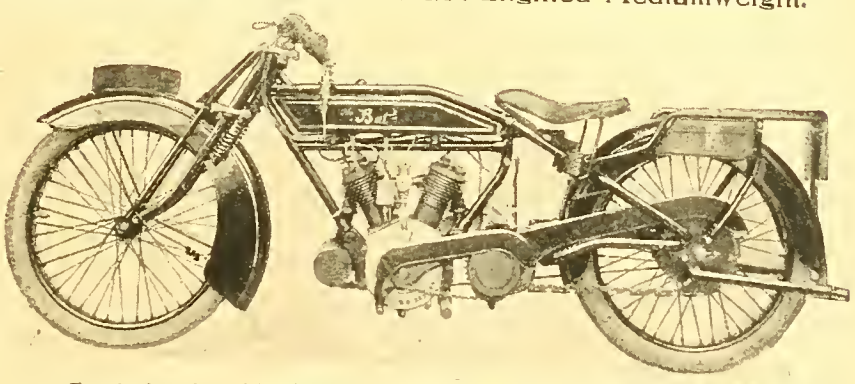


Only detail modifications have been carried out in the frame, which follows standard lines except for the absence of a carrier. A large tank for fuel only is fitted, as oil is carried in a subsidiary tank placed behind the saddle tube, the supply being controlled by a pedal-operated oil pump.

It is expected that gear ratios of 4.22 and 5.9 to 1 respectively will be used, but as 26×3in. Dunlop Magnum tyres are fitted, these gears are actually higher than is apparent at a glance.

The valve heads of the T.T. Triumph are somewhat recessed.

Not only does the design promise great efficiency, but as is usual with Triumph productions, the whole machine is pleasing to the eye.



Well-balanced and extremely rideable looking, the T.T. Triumph has been designed just as carefully from the rider's as from the engineering point of view. For example, the oil-bath chain case is neatly cut away, and allows the foot-rests to be set well back and low down—the ideal of most speed men

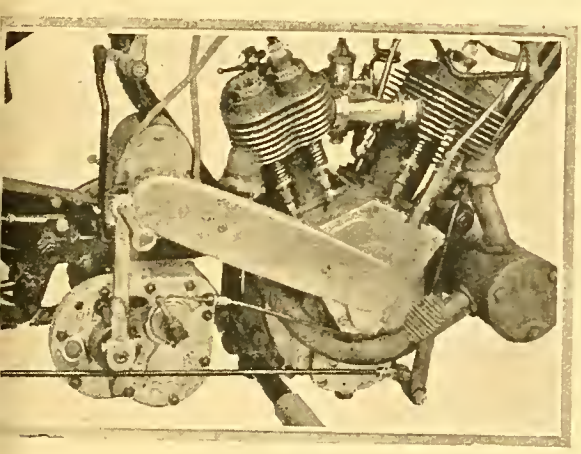
A SPORTING MEDIUMWEIGHT TWIN.

Makers of the Big Twin Bat Sidecar Outfit introduce a J.A.P. Engined Mediumweight.

A SIGNIFICANT deviation from the well-known design of the Bat motor cycle has been made in the production of a 4 h.p. V-twin sporting machine, the specification of which does not strive to introduce many startling modifications, but constitutes a soundly constructed machine which would appeal to the sporting rider. A remarkably low frame, and, consequently, low riding position, has been obtained, whilst the appearance of the new model, where a continuous line from the head to the rear wheel centre has been carefully arranged, is most attractive.

Even in these days of big flat twins and four-cylinder machines the new sporting Bat has an unusually long wheelbase. The resultant low, rakish appearance, however, certainly gives one an impression of commendable speed possibilities. Noteworthy also is the very extensive mudguarding.

In the 500 c.c. Class.



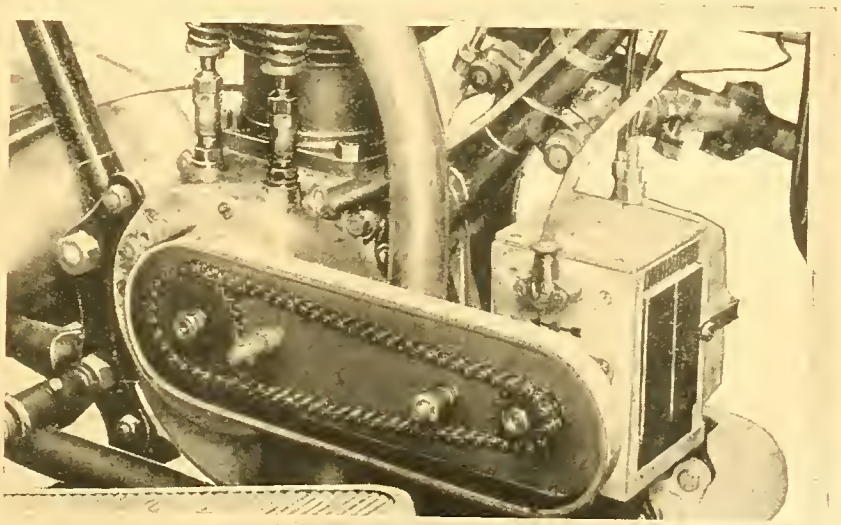
The 50° J.A.P. engine (64.5×70 mm. = 496 c.c.) is snugly housed beneath a wide tank, and, although the saddle height is only 29in. and the crank case clearance as much as 5in., the cylinders can be easily removed. A neat location for the Lucas magneto will be observed in the illustration of the engine unit.

A three-speed Sturmey-Archer gear box, clutch, and kick starter, is a standard fitting, but the Bat gate change, as supplied on the 8 h.p. model, is also installed here. The arrangement of the frame tubes follows standard practice with the exception of the lower rear fork member, which is bent upwards towards the wheel centre. This unusual construction is necessitated in order to provide adequate clearance for the chain, which is a $\frac{5}{8} \times \frac{3}{8}$in. Brampton of the spring link type. The braking is identical with the sidecar machine, external expanding and internal contracting brake bands being located on the off side of the rear wheel and operated by left and right pedals respectively. A straight tube pattern footrest is located at a convenient distance behind the brake pedals. The mudguarding is good, large valances being fitted both at the front and rear, whilst two independent stands support the mudguards. The gear ratios are essentially suitable for a sporting model, being approximately 4, 7, and 12 to 1.

An Amac two-lever carburetter is fitted, while a Lycett saddle and Druid forks are standard. If required, however, the Bat pattern forks may be substituted.

It is contemplated entering this machine for a number of forthcoming trials, when its performance will be noted with interest.

The price of this machine, which is sold by the Bat Motor Manufacturing Co. (1914), Ltd., Kingswood Road, Penge, London, S.E., is £120 less lighting outfit.



The neat location for the magneto is apparent here, and also the clean external appearance of the timing and magneto chain covers.

CHAIN FOR SUBSIDIARY DRIVES.

MANY lighting sets now being placed upon the market depend upon a dynamo or a combined generator and magneto which requires to be driven at engine speed.

Many preliminary difficulties have been overcome by the use of .8 mm. pitch duplex roller chain made by the Coventry Chain, Ltd., and the illustration shows the drive to an M-L Maglita on a 4½ h.p. S.A. used by a member of *The Motor Cycle* staff. As may be seen, the standard chain case comfortably accommodates a 24-tooth sprocket driving one of the twelve teeth on the armature. The duplex chain virtually consists of two miniature parallel chains with common rivets, and the sprockets are very wide with groove turned out to allow room for the central plates of the chain. Owing to the small pitch and the width of the chain, an exceedingly smooth, quiet drive is obtained which is specially suitable for the particular purpose of driving electrical apparatus.

Duplex roller chain, made by the Coventry Chain Co., driving an M-L Maglita.

SIDECARS FOR DISABLED DRIVERS.

Rally at Richmond Park on Saturday.

IT is rather appropriate that just when so many of our readers are discussing "sidecars for disabled drivers" there should be a disabled drivers' rally at Richmond Park (Star and Garter Gate) at 2.30 p.m. on Saturday. This rally is being organised by the "Disabled" Society (under the auspices of the British Legion), and is intended to show that, with a suitably adapted arrangement of controls, or often with standard unaltered machines, motoring for the disabled is perfectly safe, both for the driver and the general public.

As may be gathered from the selection of letters given below from our readers, mostly in answer to a query a fortnight ago, there are many sidecarists who find that the loss of a leg does not debar them from their favourite pastime.

It should be noted, too, that these are but a small selection from the great number of letters that have reached us on this subject.

A Suggested Club.

There is no doubt, therefore, that the sidecar will be much in evidence at Saturday's rally, although, of course, it is open to any type of motor vehicle.

Those who would like to attend should send their names to the secretary, the "Disabled" Society, 48, Grosvenor Square, London, W.1. Incidentally, it is desired to discuss the possibilities of forming a disabled drivers' club.

The letters following will be more particularly interesting to those of our readers who are disabled but who have not yet plucked up courage to take up, or to resume, motor cycling on account of their disability. They are mainly from riders who have lost a leg, but, in one case, further information is asked regarding the lot of the one-armed rider.

Mr. Bryan Jefferys, who gained a silver medal in the recent London-Edinburgh run, gives "1914-1919" (our previous correspondent) the benefit of his experience as under:

"I would like to assure '1914-1919' that he need have no fears as to the possibility of riding almost any make of sidecar. I am suffering exactly the same disability, viz., amputation of right leg above the knee, but have done a tremendous amount of riding, in competitions and otherwise, since I lost my leg in France in 1916. Just as an example, I would mention that in the five days which ended on Whit-Monday I covered just over 1,000 miles (including the London-Edinburgh of 400 miles almost on end). As a matter of fact, I have lately been using an ordinary 'peg leg' on account of its extreme lightness and consequent comfort (no shoulder straps), but an ordinary artificial leg is little different when riding. Personally, I have found the 4 h.p. Norton and sidecar ideal. There is nothing to alter, as it has a left foot brake as standard and the clutch is hand operated. I am rather long in the leg, and found it more comfortable to lower the footboards, and have something just to keep the foot from shaking off the latter. Nothing else but standard equipment is necessary. The Norton is such an easy starter that there is no difficulty whatever on that score. It is simplicity itself, and unfailingly reliable.

"In conclusion, I would again like to assure '1914-1919' that he need have no fears whatever, and if there are any further points he is doubtful about I should be only too pleased to help in any way I can."

Some more hints are given by "A.B." (Wolverhampton), who finds an A.J.S. machine very suitable:

Some Experiences of our Readers.

"The writer, too, has lost his right leg, and finds that the A.J.S. is very suitable, as the rear brake is on the left side, and that a strap over the footboards keeps the artificial leg safely on the footboards. A pad, however, over the knee of the artificial leg is essential, as the rubbing will quickly wear through one's clothes."

That even a fairly old outfit may be converted without much trouble is illustrated by the experiences of Mr. K. Knights:

"I have lost my leg (left one) almost at the hip, and have been driving a sidecar outfit for over two years, so perhaps my experience may help '1914-1919.'

"In the first place he should not attempt to ride solo. (I did, once only!)

"I purchased an old (1912) Humber and sidecar with the Humber Roc two-speed gear and handle starting.

"The high gear pedal being on the left side, I fastened a long hammer shaft to it and operated it with my hand. I fastened a foot rest to the sidecar chassis so that my wooden foot is held securely and cannot vibrate off. It is essential to see that excessive vibration does not shift the leg so that the knee fouls the handle-bar when turning a left-hand corner. (I have experienced this.) So it is safer to raise the handle-bars to give a good clearance. A well-sprung saddle is also essential, since only one leg is capable of absorbing road shocks. I am at present using a Brooks 500 saddle with a back rest. Great care must be taken in adjusting the saddle for height, distance from footboards, and angle of tilt, but this can only be found out by experimenting for each individual case, otherwise '1914-1919' will soon ache and feel tired.

"I think '1914-1919' will find he is at a greater advantage than I am, since he will not have laboriously to lift his wooden leg over the saddle (incidentally knocking the passenger's hat off), and stow it away between the sidecar and cycle, but can sit on the machine and arrange his wooden leg at his leisure. There are plenty of cycles which only have one pedal control, and this can generally be shifted to either side to suit circumstances.

"I certainly believe a one-legged man can as safely control a sidecar as any one else."

A One-armed Solo Rider.

"Maimed" (Coatbridge) wishes to get in touch with a one-armed solo rider, whom he saw recently in Argyll Street, Glasgow. For our part we should certainly recommend our correspondent and others in similar circumstances to take up sidecarring as distinct from solo riding. At the same time there is no reason why a one-armed rider should not get a good deal of enjoyment out of a suitably altered solo lightweight with perfect safety, provided he keeps well away from such traffic-haunted spots as Argyll Street, Glasgow. "Maimed" writes:

"As an expert cyclist, but minus the left arm, and a constant reader of *The Motor Cycle*, I desire to get a lightweight motor cycle (not cycle attachments).

"My friends, however, argue that I would never be able to control the present-day lightweight on account of its weight and power.

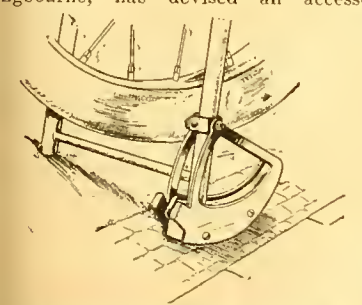
"Is there any reader of *The Motor Cycle* similarly handicapped who could give his experiences?

"That driving is possible for a man minus the arm I proved while in Glasgow the other day by seeing a young man (minus the arm) driving a motor cycle through the thickest of Argyll Street traffic with perfect confidence and ease. In fact, no man with both arms could have done any better, and the majority would have thought twice before attempting to do so, especially as there seemed to be no clutch or free engine.

"The machine seemed to be a two-stroke with two-speed gear, and had a red tank with special handle-bar and gear controls."

A New Adjustable Spanner.

MADE in 3in., 4in., and 6in. sizes, the Steelforge adjustable spanner is the product of B.S.A. Tools, Ltd., and will be marketed by Messrs. Burton, Griffiths and Co., Ltd. We have before us a 4in. sample, which fully sustains the high reputation of its manufacturers. The spanner is solidly constructed and well finished throughout; the square section adjusting thread

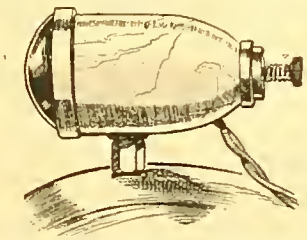


The Steelforge adjustable spanner.

s in keeping with the robust construction. Motor cyclists in search of an adjustable spanner that is well up to its work might do worse than get into touch with the concessionnaires at Ludgate Square, Ludgate Hill, London, E.C.4.

Lengthening the Stand.

MANY riders who use their motor cycles for town work must have experienced some difficulty when leaving their mounts on the stand if the road is considerably cambered. Often the slope is such that the machine scarcely more than balances, and the vibration of heavy traffic may be sufficient to cause a fall. To obviate this difficulty, Mr. P. W. Wollard, of Valenciennes Road, Sittingbourne, has devised an accessory

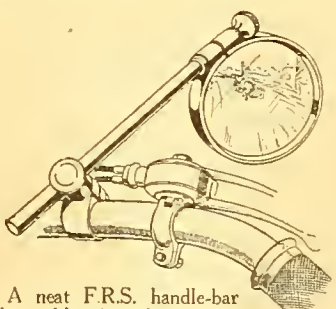


A device for lengthening the stand to suit the camber of the road.

which alters the length of one stand leg the required amount. Briefly, this consists of a segment of increasing depth, attached by radial arms to the stand. Normally this is clipped up to the leg of the stand, and is out of action, but can be dropped when desired to extend the leg from ¼in. to 1½in. Our illustration is self-explanatory, but it should be pointed out that beyond the spring clip there are no catches, ratchets, etc., to wear or get out of order.

Small Electric Lamp.

UNDER the mark of "Aladdin," a neat set of lamps is manufactured by Mr. H. W. Moreton, 11, Portland Place, Brighton. The electric sidecar lamp illustrated is suitable for use as an auxiliary head lamp, and is provided with a mudguard fixing. A turn switch is located at the rear of the lamp, which



A single screw holds the Aladdin electric lamp on the sidecar mudguard.

is finished in either polished aluminium or nickel-plate. An electric rear lamp is also manufactured, and is equipped with the same type of switch, but has a bracket suitable for fixing to the rear number plate. The third product is similar to the electric rear lamp, but is provided with an acetylene burner.

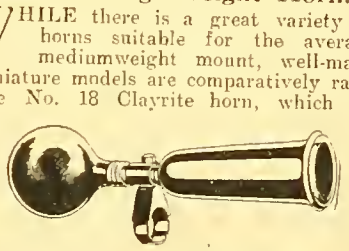
A Universal Mirror.

EASILY adapted to any required position, the new F.R.S. handle-bar mirror is a very neat piece of work The glass is carried in a frame similar to that of the firm's already popular licence card holder, and this is mounted on a long plated support. An unobtrusive but firm clip secures the support to the handle-bar, and the device can be

A neat F.R.S. handle-bar mirror with universal mounting.

arranged to suit all requirements. If necessary, the glass may be dismounted and reversed so as to be carried in a convenient position below the bar. This accessory is marketed at the price of 9s. by F.R.S. Lamps, Beam Works, Vere Street, Birmingham.

A Juvenile Sidecar Seat.

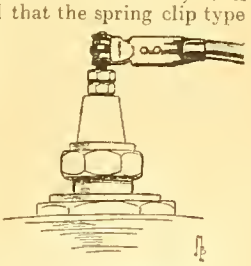


MOST sidecar owners at some period in their careers endeavour to squeeze in an extra passenger, usually a child. To meet this contingency, a folding seat, such as the Sambrook, is invaluable. In this particular instance, the seat is supported on a brass column, which screws into a socket permanently bolted or screwed to the floor. It only weighs 13 oz., and, as the back folds down, it occupies very little space when not in use. The manufacturer is Mr. John A. Sambrook, 1c, Whitby Road, Ellesmere Port.

A useful child's sidecar seat; the Sambrook.

Another Lightweight Horn.

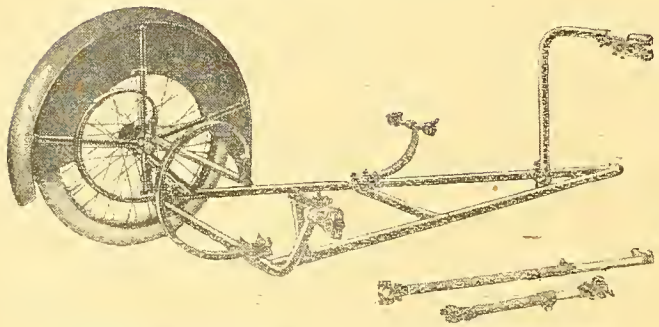
WHILE there is a great variety of horns suitable for the average mediumweight mount, well-made miniature models are comparatively rare. The No. 18 Clayrite horn, which we



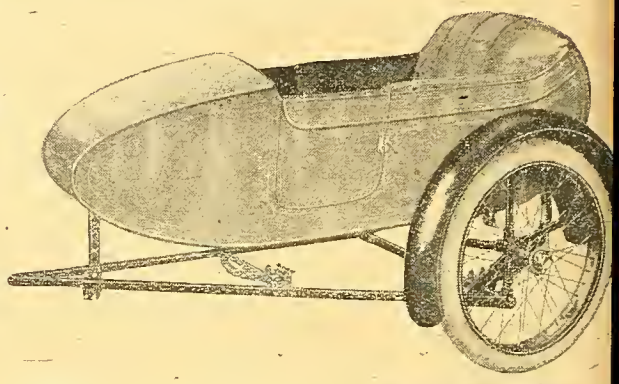
Simplicity in this new No. 18 Clayrite horn is helped both by the clean outline and the single-nut fastening.

illustrate, should, therefore, have a ready sale. It is a well-made, simple, and efficient replica of the larger Clayrite range, and is sold at 17s. 6d. The makers are Clayton-Wright, Ltd., Great Hampton Street, Birmingham.

Quick Action H.T. Terminal.



TERMINAL screws are the easiest things in the world to lose; it is only natural that the spring clip type of terminal attachment should gain in popularity. Simplicity is, perhaps, the chief attribute of the Chater-Lea clip. It is made by Messrs. Chater-Lea, Ltd., 74-84, Banner Street, London, E.C.1.



The Chater-Lea spring terminal clip.

SIDECARS FOR SPECIFIC PURPOSES.

Catering for All Tastes. Several New Sporting Models.

Dunhill's triangulated chassis for Indian Scout sidecars, showing the special attachments.

Specially built for the Indian Scout machine, this Dunhill sidecar has a clean and artistic simplicity in its bodywork.

WHAT exactly is the proportion of sidecars to solo mounts on the road nowadays is more or less a matter of conjecture. Certainly, however, the sidecar is the most popular form of pleasure vehicle extant—chars-à-bancs not excluded. At the same time, it is somewhat difficult to understand why such a large demand for sidecars—the attachments themselves as distinct from the complete outfits—should exist, especially as the great percentage of buyers obtain their outfits as such and from the one firm, and do not nowadays buy a solo motor cycle, and then, as a happy afterthought, decide to carry a passenger or two.

Why, then, do so many firms make sidecars only, and why are new sidecars coming on the market almost daily? The answer is simple enough, and, speaking generally, may be put down to the fact that these sidecars are in each and every case designed for a specific purpose and to appeal to a specific buyer.

Individual Requirements.

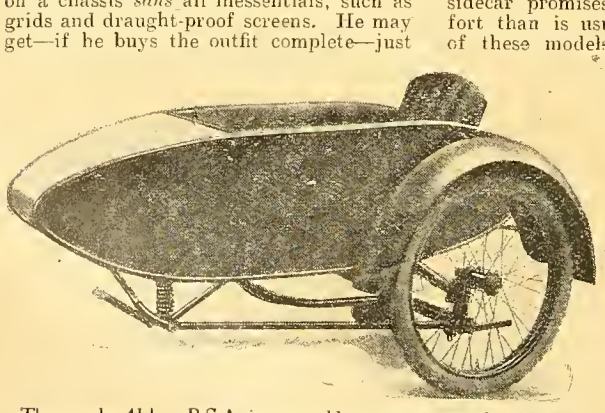
The potential sidecarist may consider his chosen machine as nearly perfection. He may, on the other hand, cordially dislike the sidecar that goes with it. He may desire a bright-hued sporting body on a chassis *sans* all inessentials, such as grids and draught-proof screens. He may get—if he buys the outfit complete—just the reverse. Or it may be *vice versa*. Again, he may possess a very "bulky" wife or wife-to-be—and bulky people are generally very comfort-loving!—and may desire an out-size in bodies. Or he may want a two-seater or a one-and-a-half-seater. Or, perhaps, he merely sighs for something different, something distinctive.

The Sidecar Specialist.

In most of these cases the makers of the outfit are loth and often unable to satisfy such tastes. Naturally, then, it is here that the purely sidecar specialist firms reap a rich harvest.

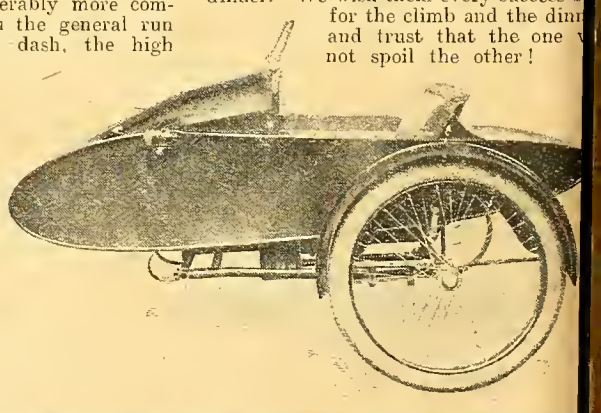
Some excellent examples of these special-purpose sidecars have come on the market recently, several of which we illustrate on these pages.

Dunhills, Ltd., of 359-361, Euston Road, London, N.W.1, are too well known to need much introduction, and a special attachment which they have constructed for the Indian Scout will be noted with interest by riders of this machine. Special connections were necessary in this case, and these are shown in the picture of the chassis. Indian red is, of course, prominent in the colour scheme.



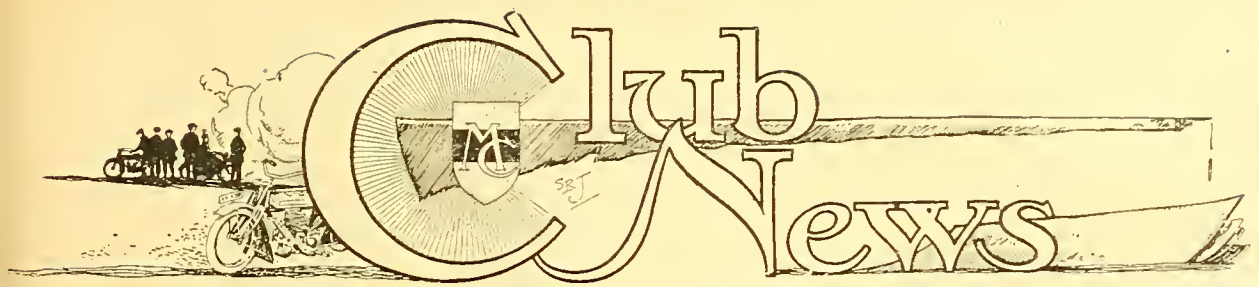
Also on very sporting lines, Hughes's sidecar promises considerably more comfort than is usual with the general run of these models. The dash, the high back-rest, and the well-padded seat will be appreciated by even the most ca hardened flapper. The makers Messrs. Thomas Hughes, Baker Stre Sparkhill, Birmingham.

Incidentally, the makers of the Brou Superior have introduced a sport model for use with their big twins. T has a large scuttle-shaped windscreen celluloid. Another firm to introduce sporting sidecar for their big twin is Rex Motor Mfg. Co., of Coventry.



Finally, we have an instance of makers of a "touring" outfit harken to the insistent demand for someth lighter, simpler, and of more speedy pearance. The B.S.A. sporting ou certainly is most attractive, and yet d not appear to be uncomfortable.

SCREW ROAD—A CLUB VENU



ALTHOUGH the club's headquart (Bangor) are within twenty-five m of the now famous Screw Ro apparently none of the members of University College of North Wales M.C have hitherto been aware of its possib ties. They are, however, making an offi attempt at the ascent on the 16th in following a petrol consumption test immediately before their first ann dinner. We wish them every success b for the climb and the din and trust that the one not spoil the other!

The popular 4¼ h.p. B.S.A. is now sold as a sporting outfit with this door-less attachment, in lieu of the heavier touring model.

Coupled with an attractive streamline body, this Hughes sidec has all the attributes (except a door) of a comfortable touring mode

Burnley and District M.C.C.

Results have now been announced of ie reliability trial held on the 29th ult., nd are as under :

HARRISON CUP AND GOLD MEDAL.—J. R. shworth (3½ Sunbeam sc.).
CLUB SILVER MEDAL.—E. Atkinson (4 riumph).
CLUB BRONZE MEDAL.—E. Pool (6 Ariel sc.).

Sheffield University M.C.C.

There were twenty-four entries in the ecent reliability run over a forty-mile erbyshire course. Results (highest pos- ble score, 100) :

SILVER MEDAL.—C. F. Boothroyd (4 Norton), 3.
SPARKING PLUGS.—G. F. Jones (3½ Brough) nd H. Winterbottom (3½ Ariel), 94, tied; M. oderberg (3½ Sunbeam sc.), 92.

Wellingborough, Rushden, and District M.C.C.

At the speed trials on the 28th ult., . M. Barron (3½ Norton) made fastest me of the day, thus gaining a most ovel prize—a free aeroplane flight offered y the Berkshire Aviation Co. Other ass winners were Rex Ludlow and W. . Spencer Robb (both on Nortons) and . J. Bosworth (3½ Prough).

Middlesbrough and District M.C.

Proving one of the most successful the ub has ever held, the Scoon reliability ial was run over a very sporting and ost beautiful course among the hills nd dales of Weardale. Sixty-eight com- etitors started, and forty-four finished, he Scoon silver bowl being awarded to . S. Williams, and gold medals to A. . Buttres and J. R. Jenny.

Oxford M.C. and Banbury M.C.

Formula results now being available of e inter-club hill-climb held on the 28th t., and reported in last week's issue *The Motor Cycle*, the total marks ined by the respective clubs have now en announced. The University City ub proves the winner with twenty-nine ints against the nine for Banbury.

lymouth and District M.C. and L.C.C.

In delightfully sunny weather, and th good entries, the first annual motor cle gymkhana was held at Home Park a recent Saturday afternoon. Skilful iving of both solo and sidecar machines s witnessed in events which varied om potato-picking to obstacle races and g jumps. Results :

GG AND SPOON RACE.—*Solo:* 1, A. C. Smith riumph); 2, Miss M. Phillips (Connaught). *ecar:* 1, C. C. Mason (Matchless); 2, H. S. (Norton).
OTATO PICKING.—*Solo:* 1, J. D. Spooner nbeam); 2, A. C. Smith (Triumph). *Sidecar:* C. C. Mason (Matchless); 2, J. C. Holmes rley-Davidson).
LOW RACE.—*Solo:* 1, C. R. Endicott (A.B.C.; M. Amiss (Abingdon).
BSTACLE RACE.—*Solo:* 1, M. Dawes iumph); 2, A. C. Smith (Triumph).
ONG JUMP.—1, J. D. Spooner (Sunbeam), 10 ; 2, M. Dawes (Triumph).

Brighton and Hove M.C.C.

Results of the recent hill-climb on Windmill Hill, which attracted more than fifty entries, are appended :

FLYING START.

CLASS 1 (350 c.c.).—1, A. T. Koehler (2¾ Coulson B), 41⅘s.; 2, E. Stacey (2¾ Verus), 47⅗s.; 3, F. Jenner (2¾ Royal Ruby), 50⅘s.
CLASS 2 (600 c.c.).—1, A. N. A. Hewett (3½ Sunbeam), 34s.; 2, C. Volk (3½ Sunbeam), 34⅘s.; 3, L. G. Watts (4 Triumph), 36⅘s.
CLASS 3 (Unlimited).—1, A. N. A. Hewett (3½ Sunbeam), 33s.; 2, C. Volk (3½ Sunbeam), 34s.; 3, W. H. Sheraton (3½ Norton), 34⅘s.
CLASS 4 (Sidecars on Formula).—1, H. D. Dobson (3½ Norton sc.), 50s.; 2, S. Dunford (7·9 Harley sc.), 43s.

STANDING START.

CLASS 5 (Unlimited).—1, C. Volk (3½ Sunbeam), 39s.; 2, A. N. A. Hewett (3½ Sunbeam), 39⅘s.; 3, W. H. Sheraton (3½ Norton), 41s.
CLASS 6 (Sidecars on Formula).—1, H. D. Dobson, (3½ Norton sc.), 53⅗s.; 2, S. Dunford (7·9 Harley sc.), 43⅘s.

North Cheshire M.C.C.

Results have now been announced of the trial for the Mather Cup, held on the 29th ult. Mow Cop was the *pièce de résistance* of the morning's run, and here excellent climbs were made by A. F. Gibson (4 Triumph sc.), T. J. Lawton (3½ Norton), and S. Bann (8 Matchless sc.). At Cow Dale, in the afternoon, G. T. Holland (the holder of the cup) made a very fast climb on his G.N. But the feature of the trial was the consistent running of M. Foreman's 1912 Rudge, which was awarded the Mather Cup. Other awards follow :

FIRST-CLASS CERTIFICATES.—J. F. Gibson (4 Triumph sc.), A. Booth (3½ Sunbeam), and O. Jessop (3½ Sunbeam), 93 marks.
SPECIAL LIGHTWEIGHT PRIZE.—N. C. Lawton (2¼ Enfield), 25 marks.

Leeds University M.C.

At the recent speed trials timing was worked rather ingeniously by means of a starting flag worked by trigger action and spring released by competitors running across a string on the road. The results were :

300 c.c. SOLO.—1, A. Burgess (2½ New Hudson), 23s., 39 m.p.h.; 2, B. Hoggitt (2½ Clyno), 26⅖s., 34 m.p.h.
350 c.c. SOLO.—1, C. P. Porritt (2¾ Douglas), 17⅘s., 52 m.p.h.; 2, G. G. Hardy (2¾ Douglas), 18s., 50 m.p.h.
550 c.c. SOLO.—1, R. F. L. Gosling (3 A.B.C.), 14⅖s., 62 m.p.h.; 2, A. F. Plummer (3 A.B.C.), 16s., 56 m.p.h.
750 c.c. SOLO.—1, A. W. Gregory (4 Norton), 13⅗s., 67 m.p.h.; 2, R. F. L. Gosling (3 A.B.C.), 14⅘s., 61 m.p.h.
1,000 c.c. SOLO.—1, A. W. Gregory (4 Norton), 12⅖s., 70 m.p.h.; 2, R. F. L. Gosling (3 A.B.C.), 14⅖s., 63 m.p.h.
750 c.c. SIDECARS.—1, C. Brook (6 A.J.S. sc.), 19⅗s., 46 m.p.h.; 2, D. Roper (4 Triumph sc.), 21s., 42 m.p.h.
1,000 c.c. SIDECARS.—(1.) W. Hallitt (8 Zenith sc.), 15⅗s., 57 m.p.h.; (2) D. Roper (4 Triumph sc.), 21s., 42 m.p.h.

LADY MOTOR CYCLISTS IN ALL NIGHT TRIAL. In spite of the strenuous nature of the Newcastle and District M.C. trial, these two ladies, both astride 3½ h.p. N.U.T. machines, put up an excellent performance.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

CAMPING AND THE LAW—TWO MORE OPINIONS.

Sir,—With reference to "Ab Origine's" letter quoting Section 72 of the Highway Act, 1835, I suggest it would be very difficult, probably impossible, to obtain a conviction against a motor cyclist under that section. The well known legal rule of *ejusdem generis* would, doubtless, be held to apply, and the words "or other person" be held to mean "or other person of the same nature as a hawker, higgler, or gipsy." To mention but one legal precedent, a law relating to "sheep, pigs, and other cattle" was held not to apply to cows. This may seem very strange to your readers, but it is, nevertheless, the judgment of the Courts. CAMPER.

London, W.9.

Sir,—Your previous correspondents on this subject seem to be under the impression that there is a "correct law regarding campi g."

It is no offence (and, therefore, is not punish ble) merely to camp on a roadside waste, and the constable who "moved on" a motor cyclist on the grounds that he had previously "moved on" gipsies was wrong in both cases—it is no part of his duty.

There are certain things that one may not do by the roadside, to wit,—a person may not light a fire within fifty feet of the centre of the highway.

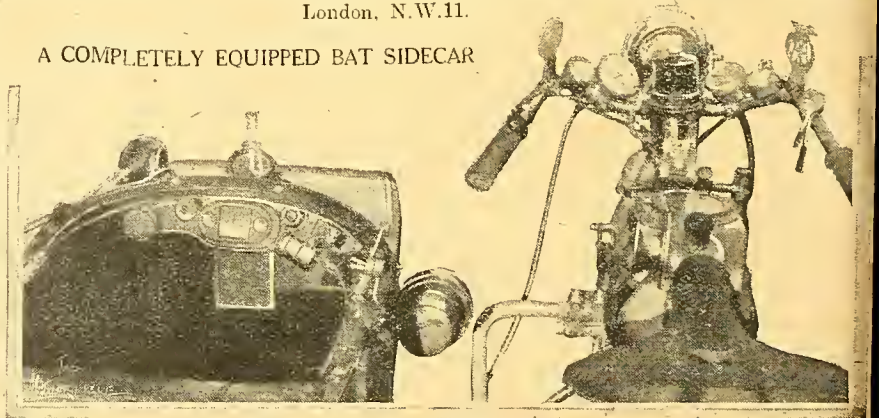
No such limitation of time as twenty-four hours, referred to by Mr. Richardson in your issue of May 12th, exists, except in some people's imagination.

Of course, if a person made his encampment permanent, or for weeks or months, he might be assessed for rates in the usual way, or he might, at the instance of four householders, be indicted as a public nuisance; but if a tired Englishman—be he motor cyclist or not—likes to rest on the roadside waste, he has a perfect right to do so, and in doing so does not infringe any Act of Parliament.

W. R. JEFFERY.

ELECTRICAL PHENOMENON

Sir,—May I crave space to reply to the letters of Lodge Plugs, Ltd., in your issue of May 19th, and Mr. N. W. Benley in your issue of the week following?



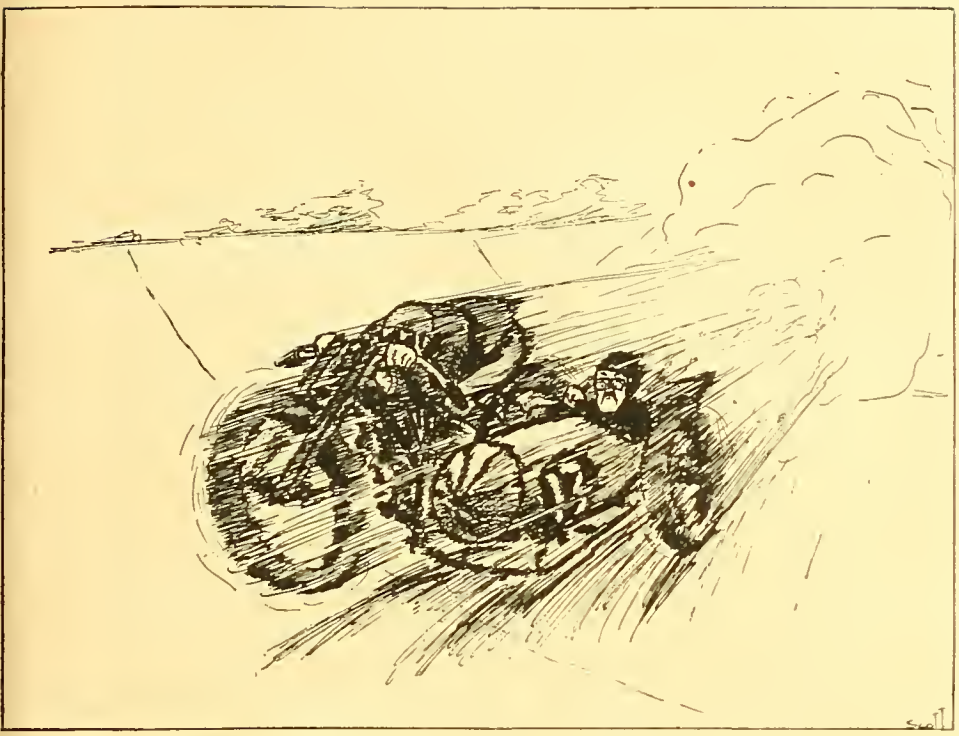
First, I certainly interpreted Mr. Benley's expression "flexible" to refer to ordinary electric lighting flexible, as is customary in the electrical trade, but this does not, in my opinion, explain his observations. I am quite aware that coiling the high-tension cable would increase both the self-induction and the capacity of the circuit, but not sufficiently to prevent a spark at the plug, provided the magneto and the plug were in perfect working order. Immediately after reading Messrs. Lodge's letter I carried out the following experiment on my 7 h.p. A.J.S. twin. A solid iron core 5in. long and ⅜in. diameter, was wound with twenty turns of high-tension rubber insulated cable in two layers, and the ends inserted between the end of the magneto cable and plug of the back cylinder, so that the coil was in series with the plug. The engine was then started from cold in the usual way without any misfiring or irregularity. Retarding the spark fully and closing the throttle to the slow running position failed to produce a misfire. The front plug was then shorted, and the engine continued to fire on the cylinder to which the coil was connected. Changing the coil over to the front cylinder, and repeating the above experiments, produced no variations in the results. I cannot see, therefore, that, provided the insulation of the cable is sound, coiling the high-tension cable round a frame tube, or an engine bearing, can produce any serious defects in the firing. I do not think any rider would go to the trouble in practice of coiling his surplus cable more than the twenty turns I experimented with. I may say, in conclusion, my engine is a very easy starter with the Cox-Atmos carburetter I have had fitted, and this ease in starting was not interfered with by the above experiment, showing that the plugs functioned perfectly throughout. F. E. SCHOFIELD.

AVERAGING THIRTY.

Sir,—Until a few weeks ago I shared the belief of "Eclipsed" that very high speed spurts were necessary in order to average 30 m.p.h. on the road. I discovered my error by driving my own machine from Dorchester to Winchester *via* Ringwood (sixty miles) in 1h. 58m., which time included a short stop for petrol at Romsey. This meant an average road speed of over 31 m.p.h. I had a heavily loaded sidecar, and my speed certainly never exceeded 37 m.p.h., except for one short burst of less than a mile, when I ambitiously, but unsuccessfully, sought to overtake a solo rider, but even then I never reached more than forty-two or forty-three, which is the utmost I can get out of my mount when untuned and fully loaded. On the other hand, the road was good. I had only four small towns to go through, and I rarely dropped below 34 m.p.h. In such circumstances it would appear that one's average may be pretty near to one's maximum. C.D.S.

London, N.W.11.

A COMPLETELY EQUIPPED BAT SIDECAR



This photograph was submitted in the recent Sheffield-Henderson photographic competition by J. C. Montgomery, Bridgwater, who gained a consolation prize. The equipment of this very completely fitted sidecar is as follows:

SIDECAR

Watch
Voltmeter
Ammeter
Detachable inspection light
Compass above dash
Mirror below dash
Electric cigarette lighter
Electric Klaxon

MACHINE.

neroid altimeter
Rev. counter inspection lamp (behind head light)
Speedometer
Stop watch on tank

Air speed indicator (rear

TIME: THE PRESENT. SPEED: EIGHTY MILES AN HOUR.
That forgetful, but otherwise excellent mechanic, Jones, has just remembered that he omitted to tighten those sidecar connections, nor has he registered for "free insurance!"

SOLUTION NEXT WEEK!

Sir,—Here is another conundrum for your readers. Recently I sent away a two-stroke engine and crank case for slight repair. On its return last week I reassembled the machine and tried to start the engine. Nothing doing! After trying for half an hour, and using up a lot of language, I gave it up. Two days later I made another attempt. Aided by the proffered advice of several of the "clever" brigade, I went carefully over the machine. Compression was good, timing absolutely correct, a good fat spark at the plug, jet clear, and proper mixture reaching the cylinder, but all that happened on trying to start was an asthmatic cough and a flabby kick. After wasting more time, etc., an idea dawned on me. Investigation proved it correct, and as soon as the alteration was made the machine ran as sweetly as ever. What was the cause of the "strike"? PUZZLED.

Dumbarton.

["Puzzled" asks us to withhold the solution for a week, but we think that many of our readers may discover the fault right away. It is not a difficult piece of deduction.—ED.]

POLICE PREJUDICE AND THE SWISS SIX DAYS.

Sir,—Would you allow me to trespass on your space to comment on Mr. J. Stuart White's letter, published in a recent issue. I would like to do so because it is likely to produce an erroneous impression on the mind of English readers as to the state of affairs in Switzerland. It is true that in several cantons there are police restrictions with regard to the circulation of motor cars. It is not exact to state, however, that this happens exclusively north of Lac Léman and the St. Gothard Pass, "where the German language and mentality rule supreme," as Mr. Stuart White likes to style it. As a matter of fact, the Canton Grison—in which the population speaks partly Roman, partly Italian, and partly Swiss-German—forbids motor car traffic entirely, and in the French speaking Cantons, Geneva, Neuchâtel, and Vaud, motors are prohibited on Sunday afternoons during the summer months. On the other hand, no such prohibition exists in the Canton of Bale-Ville, situated in the extreme north, just across the German frontier.

I quite agree, of course, that circumstances are far from being satisfactory for motor car drivers owing to the right of each of the twenty-five cantons to issue its own traffic regulations, which differ in varying degrees. What I want to emphasise, however, is that the police regulations have nothing to do whatsoever with the fact that in one part of Switzerland French is spoken, in another Italian, and in yet another the so-called Swiss-German dialect, a tongue as different from the German as is Flemish. I may add that quite recently, on May 22nd, 1921, a vote was taken in Switzerland to procure an alteration of the Swiss Constitution by which the Executive is empowered to issue regulations on motor car traffic for the whole of Switzerland. The Cantonal Governments will still be able to limit the traffic within their boundaries, but in virtue of this decision of the people of Switzerland the right is now formally given to the Federal Authorities to open for traffic all routes they deem necessary. I am sure that, in consequence of this, in the very near future things will become such that Mr. Stuart White, as well as a number of his English colleagues, will try their luck again, and, after having driven all over France, will pay a visit to Switzerland, where, I think I dare say, neither the German language nor the German mentality "rules supreme." Policemen in all countries are, of course, a peculiar race, but I do not think they are worse in our country than elsewhere.

DR. PAUL LANG,
Secretary of the London Group of the Nouvelle Société Helvétique.

ONE MAN'S MEAT——!

Sir,—The motor cycle of to-day, speedy and reliable as it is, is not, to my mind, as far advanced in design as it should be—it follows too much on push cycle lines.

Let us look at car practice. When motor cars were first used they followed the lines of the old horse-drawn vehicles, which *The Motor Cycle* described only a few months ago. But makers soon dropped that, and struck out on their own. The result is as it is seen to-day—a perfect motor car, with little to remind one of horse-drawn four-wheelers.

Now, with motor cycles, taking first the frame, nearly all the makers, with one or two exceptions (such as the Scott, Cotton, etc.), follow the ordinary cycle frame, and also use the crank case as a connecting link. Now, in my mind, the crank case is a crank case, not a portion of a frame. Let us next consider the engine or transmission of power from the engine. Central transmission direct from the crankshaft centre (as car practice) is the ideal. This method of transmitting or harnessing of power is only used on a few motor cycles. As a practical engineer of nearly thirty years' experience, I fail to see the side pulley as a sound engineering job. The pulley unsupported on one side is bound to set up a side strain, or twist, in the frame, and the more power the engine develops the greater that strain. Of course, we know that fine results are obtained by engines of that type, such as the Norton, Sunbeam, etc.; but I think that this method of transmission is due to simplicity in practice and adaptability in engine design, but at best it is only a makeshift. Failing central transmission, the next best thing is the Scott practice, with outside central flywheel and driving sprockets, supported by roller bearings on each side.

Now another grumble is the gear change control. Why have it on the tank side? On a sharp corner, traffic, or deep rut and greasy gradient, the very time that both hands are

wanted on the bars, we have to let go to change gear. Why not foot change, as Scott, or both hand and foot change? Even the Ford on four wheels changes by pedal, while we risk our balance and our necks on hand change.

In conclusion, one point in which we score over car practice is noise: we are further advanced in making noises than we were ten years ago. SILENT TWIN.

Llanover.

WIND RESISTANCE OF MUDSHIELDS.

Sir,—The letter in your issue of May 19th from your correspondent Mr. G. Sharp will be of considerable interest to all motor cyclists, as there is no doubt that a combination of a thoroughly efficient shield for the rider with a method of increasing the efficiency of the engine is one which every enthusiastic motor cyclist would desire; and certainly the flat or "stove pipe" types of shield, however efficient from the point of view of protection from mud and oil to the rider, are a positive handicap to the machine in other respects.

A considerable amount of practical experience has shown that the V shields which are covered by our patent No. 33,617, 1920, have all the good points without the compensating disadvantages of many other types, and practical tests show that even when a motor cyclist has been going "all out" there is an entire absence of overheating of the engine.

The weight even of the heavier type is only 6 lb. 6 oz. per set complete with fittings, so that this is a negligible factor, whilst actual experiment has shown that the special formation of the shields offers less wind resistance than would be the case if the rider was quite unprotected.

THE SPEEDWELL GEAR CASE CO., LTD.

AN OCCASIONAL PASSENGER SIDECAR SUGGESTED.

Sir,—He would be a captious critic indeed who could not find the motor vehicle to his taste among the host of models offered to the public nowadays. Nevertheless, there is one attachment I have yet to see advertised, which, for want of a better name, I will call the bachelor's sidecar. A sidecar is of value to the solo rider for the following reasons:

(1.) It obviates the nuisance of continually lifting the rear wheel on to the stand when stationary.
(2.) Stability on grease and tramlines.
(3.) Carries luggage, gun case, golf clubs, etc.
(4.) Carries occasional passengers.
(5.) Carries a spare wheel.

Such a sidecar requires no hood, screen, door, upholstery, or permanent seat, but should embody the following features: *(a)* Capacity for about 1 cwt. of luggage. *(b)* Waterproof cover. *(c)* Tip-up seat and straps for securing luggage. *(d)* Accommodation for spare wheel.

It need not be particularly comfortable, but must be light and strong, for it would be attached to fast machines.

In conclusion, I have noticed recently a controversy on the subject of the merits of four-cylinder American machines as opposed to the British single. Last year I sold one of the former in favour of the latter. Of course, the four-cylinder scores in pace and comfort, but for everything else the Britisher has it easily, in my opinion. BACHELOR.

Hong Kong.

TAXATION OF MOTOR CYCLISTS.

Sir,—In the course of the reply made by the Minister of Transport to the deputation from the Motor Legislation Committee which waited on him on the 5th ult., when representatives of our organisations were present, Sir Eric Geddes stated that, although he had made special enquiries as to the working of the new taxation as regards different classes of cars, he had not specially investigated the position as regards motor cycles.

Although perhaps motor cyclists may not have been more hardly treated than other classes of road users, inasmuch as after a fair mileage they recoup themselves for the tax that under the old scheme they would have paid upon their petrol, yet, from the figures issued by the Minister, it would appear that motor cyclists more than any other class of road user have failed to reach the numbers that it was estimated would by now have taken out licences.

The chief cause is obvious, and lies in the fact that the present high annual tax (required in a single payment) proves a very heavy financial burden to many motor cyclists, especially as the same amount is required even if the machine is only used for the last four months of the year.

Another cause is that motor cyclists have not yet been accorded the privilege of taking out quarterly licences at a proportionately reduced annual tax.

Undoubtedly, if these disabilities had not been present at the commencement of the year a much smaller number of motor cyclists would have foregone the use of their machines. The number of such, however, is very large.

The suggested 25% reduction in the amount of annual tax, with a further proposal that licences should be issued from day to day or for short fixed periods at a proportionately reduced rate of tax, thus easing the financial burden and giving greater consideration to the convenience of motor cyclists, would not only assist the sport and pastime and increase trade, but would afford additional revenue to the Government, not only from this particular taxation, but from the revenues which naturally accrue to the Exchequer in periods of healthy trade.

Amongst road users the motor cyclist pays the greatest attention to economy in its various phases, and though his machine is peculiarly susceptible to the condition of road surfaces, it is not responsible for road damage except to an extent almost incapable of mathematical calculation.

Whilst the motor cyclist is prepared to pay a share of road maintenance and improvement, in justice he asks that his present financial burden should be lightened and payable according to periods of use.

The adoption of the above suggestions would greatly improve the present system, which is obviously prohibitive to many would-be motor cyclists.

(Signed) T. W. LOUGHBOROUGH,
Secretary Auto Cycle Union.

(Signed) H. R. WATLING,
General Manager British Cycle and Motor Cycle Manufacturers' and Traders' Union, Ltd.

SUMMARY OF CORRESPONDENCE.

At a Putney garage on Whit-Monday "G.T.W.B." attempted to buy some carbide, but was told that there was none in stock. As it was then nearly dark, he asked for information as to where he could get some, to which the manager of the garage replied very rudely, so rudely that "G.T.W.B." had perforce to censor his letter and we to summarise it! Amongst other things, this obliging garage man said that motor cyclists were more trouble than they were worth.

Another case of widely varying quotations for spares is brought to light this week by Mr. T. Stearne, who required a new spindle and cone for his V.S. hub. One firm quoted 18s. 6d., another 5s.! In fairness, he wishes it stated that the lower estimate came from Mr. J. M. Geiger, 24, Mansfield Road, Gospel Oak, London, N.W.3.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

	Price net.	Post.
"MOTOR CYCLES AND HOW TO MANAGE THEM." The standard handbook on the motor cycle. It deals with every part of the machine, and with every type of machine, and will be found invaluable to all motor cycle riders. New Edition. Just published	2/6	2/10
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition	2/-	2/3
"MAGNETOS" By A. P. YOUNG. A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes, from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES." By "IXION," of *The Motor Cycle*	5/-	5/3
"THE MOTOR CYCLE" ROAD MAPS. England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10
"THE MOTOR CYCLE" ROUTE BOOK With 32 pages of Road Maps of England and Wales, Scotland, and the London District	5/-	5/4

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

GEAR RATIOS.

The engine sprocket of my machine has seventeen teeth, countershaft thirty-four teeth, final drive on countershaft eighteen teeth, and back wheel forty-eight teeth. What would the gears be if I fitted (1) eighteen tooth sprocket on engine shaft, (2) nineteen tooth sprocket on engine shaft?—G.A.

(1.) 5 to 1. (2.) 4.77 to 1. Full information as to method of calculating gear ratios is contained in the latest edition of "Motor Cycles and How to Manage Them."

TYRE SIZES.

I want to carry a spare tyre, but wonder what size I should get, as I have a B.S.A. with tyres marked 26×2½ for rims BSD2, and Grindlay sidecar with tyre marked 26 × 2½. What puzzles me is that the motor cycle rims measure 22½in. in diameter, and the sidecar rim is only 21in.—W.W.

The rims fitted to the B.S.A. are the D2 size (nominally for 26×2¼ or 26×2⅜ tyres), but the covers actually fitted are 26×2½ for 2¼. If you examine them you will see that this size is marked upon them. The sidecar, judging by your measurement, has a 26×2½ rim, and consequently the tyres on the motor cycle are not interchangeable with that on the sidecar.

POWER OUTPUT OF TWO-STROKE ENGINES.

Wishing to select a motor cycle for the coming season I was informed by a well-known firm that a 2½ h.p. two-stroke engine attains 5,000 r.p.m. on the bench. Not wishing to dispute the statement (which seems rather high for a two-stroke), I am asking you if it is possible, for I imagine that such a power unit would have to give off about 5 b.h.p. to reach such a speed.—DOUBTFUL.

In all probability a two-stroke engine of about 260 c.c. capacity will develop from 4 to 5 b.h.p. at maximum revolutions on full throttle. 5,000 r.p.m., however, is rather high for this type of engine, and probably 4,000 r.p.m. is nearer the mark. The power output of two-stroke engines usually reaches its maximum at about 3,000 to 3,500 r.p.m. As compared with four-stroke engines, they are essentially of the slow running variety.

SIDECAR ON A LIGHTWEIGHT TWIN.

Possessing a 1916 3 h.p. twin Royal Enfield, I desire to attach a light but strong sidecar. Is this machine suitable for passenger work?—C.A.B.

The machine in question is not really suitable for sidecar work, but in a fairly level district it might give satisfaction, provided that the attachment is light and too much is not expected of it. Many little two-strokes are giving satisfaction as sidecar machines.

WHAT IS "C.C."?

What is meant by "c.c." in stating the size of an engine? Is it used in England for comparing the power of engines or for handicapping?—W.A.B. (Canada).

The letters "c.c." are an abbreviation for cubic centimetres. They are, however, used occasionally in place of "cubic capacity." Thus an engine which is described as being of 750 c.c. is one which has a piston displacement of 750 cubic centimetres. For racing and competition purposes engines are divided into classes according to their cylinder capacities.

TO FIND TON-M.P.G.

Will you give me the formula for comparing the ton mileage figures of two sidecar outfits?—H.H.B.

The calculation is quite simple. It is merely necessary to multiply the total weight of the machine in tons by the distance travelled in miles, and divide by the amount of fuel used in gallons. The ton mileage of a machine weighing 336 lb. giving 60 m.p.g. is 9 ton-miles per gallon.

SIZE AND POWER OF AN OLD ENGINE.

(1.) I have an old V twin engine. The bore appears to be about 66 mm. and stroke 75 mm., and angle between the cylinders about 75°. What is the horse-power and cubic capacity? (2.) Can I get a 75° magneto?—J.C.P.

(1.) If the dimensions which you give are correct, the cubic capacity is 582 c.c.; the engine would be rated at approximately 4½ h.p. (2.) It is doubtful whether you can obtain a magneto to suit a 75° V twin engine without having one specially made, as the angle is not a very usual one.

A scene at the foot of Oakamoor Hill in Derbyshire, the venue of the recent East Midland A.C.U. Centre open hill-climb.

EXPERIENCES WANTED.

"A.H." (Eccles).—Degory carburetter fitted to 2¾ h.p. Douglas: m.p.g., acceleration, and power.

"Scooter" (Rye).—Kingsbury scooter, especially starting from cold, size of jet, and quantity of oil.

READERS' REPLIES.

OIL PUMP DIFFICULTIES.

In the issue of May 5th "G.B.T.J." complains of trouble with his Scott oil pump. I think he will find that this is caused by the gland leather having become too soft and wedging between the plunger rod and the gland nut. I had similar trouble which I cured by fitting a new gland leather.—JOHN HYATT.

TWO-STROKE RATTLE.

The explanation of the phenomena is this. A weak mixture, carrying petrol, but little oil, will fire at low temperature (or more easily than rich oily vapour). Your correspondent "Tunbridge Wells" would do well to examine his crank case and cylinder joints for a blown-out joint ring (possibly only partial) or other air leak, such air leaking in diluting the pure petrol vapour and producing a lower flash point mixture. Also he should be sure that the exhaust gas can be swept freely, and that his silencers are perfectly clear, especially if a Villiers with the usual exhaust pipe, as any obstruction in the exhaust will cause pre-ignition. The symptoms of rattle when going downhill occur occasionally on all two-stroke engines, and are caused by the critical speed of the engine, for a given strength of fuel mixture, being temporarily exceeded, the mixture firing probably by compression alone or by a particle of glowing carbon which would not fire a richer mixture in ordinary running. Thus we have an engine firing long before dead centre, and the momentum carrying the piston over and completing the stroke normally. —ALLDAYS.

RECOMMENDED ROUTES

WORCESTER TO WOOD GREEN.—W.K.

Worcester, Spetchley, Upton Snodbury, Inkberrow, Alcester, Stratford-on-Avon, Wellesbourne, Kineton, Warmington, Banbury, (near edge of) Adderbury, Aynho, Souldern, Baynard's Green, Bicester, Waddesdon, Aylesbury, Aston Clinton, Tring, Northchurch, Berkhampsted, Boxmoor Station, Leverstock Green, St. Albans, Barnet, Wood Green. Approximately 115 miles.

MANCHESTER TO SWANSEA.—T.W.D.

Merthyr Tydfil, Nant-ddu, Storey Arms, Brecon, Bronllys, Llyswen, Erwood, Builth Wells, Howey, Llandrindod Wells, Rhayader, Llangurig, Dyffryn Castell, Ystytty-Cynfyn, Devil's Bridge, Aberystwyth. Approximately 96 miles.

Important Dates.

Tues., June 14th—Junior T.T. Race

Thurs. June 16th—Senior T.T. Race.

Sat., June 18th—North-Western Centre A.C.U. Open Speed Trials.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup

Fri., July 1st, and Sat., July 2nd Arbuthnot Trophy Trial.

Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.

Sat., July 2nd—500 Mile Race at Brooklands for the Miller Gold Cup.

Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials

Sat., July 9th—St. Andrews Speed Trials

Sat., July 9th—Cardiff M.C.C. and associated club Open Hill Climb.

Mon., July 11th, to Sat., July 16th Scottish Six Days' Trial.

Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.

Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials.

Sun., July 24th—Motor Cycle Grand Prix Race in France.

Sat., July 30th—Newcastle and District M.C. Open Speed Trials.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Sat., Aug. 6th—B.M.C.R.C. Open Brooklands Meeting.

Sat., Aug. 6th—North Wales M.C.C. Open Reliability Trial.

Fri., Aug. 12th—Motor Cycle Grand Prix in Belgium.

Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.

Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.

Thurs., Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

SPARKLETS

More Sidecar Taxis Licensed.

A B.S.A. motor cycle taxi has been recently licensed in Salford.

An Excelsior taxicab outfit was approved by the Watch Committee of Leeds during the end of last month.

Magnetos at High Speed.

The Douglas machines which secured first and third places in the Brooklands Senior T.T. race recently were equipped with E.I.C. magnetos.

Consistent Riders.

Among nearly a hundred competitors Hugh Gibson, riding an 8 h.p. Royal Ruby sidecar, secured the A.C.U. North-western Centre championship for 1921, his was the only sidecar outfit to make the ascent of Litton Slack without assistance. S. Eastwood, on a 2¾ h.p. machine of the same make, put up the best performance in the lightweight classes up to 350 c.c.

In the London-Edinburgh Trial the same two riders, mounted on 2¾ h.p. and 3 h.p. Royal Ruby machines respectively, both qualified for gold medals.

Catalogues Received.

Humphries and Dawes, Ltd., Hall Green, Birmingham: Described as an "art folder," a single sheet specification and illustrates the O.K.-Junior passenger machine in a clear and adequate manner.

R. W. Weatherell, South Green, Billericay, Essex: A small three-fold sheet containing loose reproductions of the R.W. Scout machine in various models.

J. Kirby, Broadgate, Lincoln: Specifications of the Lincoln-Elk machines which are now equipped with countershaft three-speed gear boxes.

Whitley Manufacturing Co., Ltd., Charterhouse Mills, London Road, Coventry: Illustrating and describing the two models, and also a chain adjuster for Sturmey-Archer gear boxes and foot control pedal for Sturmey-Archer clutches. The manufactures of this firm have been appreciably reduced in price.

Siemens Brothers and Co., Ltd., Caxton House, Westminster, London, S.W.1: "Primary Cells and Batteries—Dry and Fluid" is the title of a catalogue which lists batteries of various types useful for lighting on motor cycles.

J. B. Brooks and Co., Ltd., Great Charles Street, Birmingham: A new edition of the "Brooks Book," which deals thoroughly with saddles, leather cases and all other equipment of a similar nature. The new cantilever leaf-spring saddles are also included.

B.S.A. Cycles, Ltd., Small Heath, Birmingham: "A much improved catalogue of B.S.A. motor cycles is now available. It contains much detailed information, illustrations, and reproductions of machines in their true colours.

T.T. and Summer Number.

Next Thursday's issue of *The Motor Cycle* is the annual special T.T. and Summer Number containing all the latest news of the Tourist Trophy races, and many special features.

Arbuthnot Trophy Trial Entries.

Entries for the Arbuthnot Trophy Trial are already coming in. This competition is open only to officers of the R.N., R.N.R., R.N.V.R., and the R.M., who are actually on the active list. Entries close on Monday, June 13th, and should be sent to the Secretary, the Auto-Cycle Union, 83, Pall Mall, London, S.W.1.

Short Notice for a Long Ride.

Mr. J. R. Watkins, a Royal Enfield entrant for the London-Edinburgh, had his mount smashed by a lorry when *on the way to the start*. He immediately rushed home, started up his old W.D. Triumph, and, without any sort of preparation, completed the 400 miles run, and gained a gold medal. This makes an additional gold medal for Triumph machines on the list which we published last week.

Observed Riding in Open Trial.

Open trials south of London are fairly rare events, and therefore the open event to be held by the Bournemouth and District M.C. and L.C.C. on July 2nd should attract a great number of South-country riders. As there are no "real" hills within a reasonable distance of the club's headquarters, several novel features have been introduced to put the whole trial on a competitive basis. These include starting tests, timed hill-climbing, speed tests (in a private park), and "observed riding." Entries will be received until June 22nd by the trials secretary, Mr. E. L. Herring, 44, Middle Road, Bournemouth West, Hants.

Watch your Licences!

Motor cyclists are recommended to keep an eye on their licences and make sure that the ink with which they have been filled up is not fading away. Two motor cyclists were summoned at Bristol last week for having motor licences on which the particulars were not visible. One licence had been issued in January at Taunton and filled up with red ink, and the other made out in Bristol with black ink. In each case the hot sun had caused the ink to fade. The result was that summonses were issued, not against those who were to blame, *i.e.*, the licensing authorities at Taunton and Bristol, but against the victims who were in no way responsible.

Special Features.

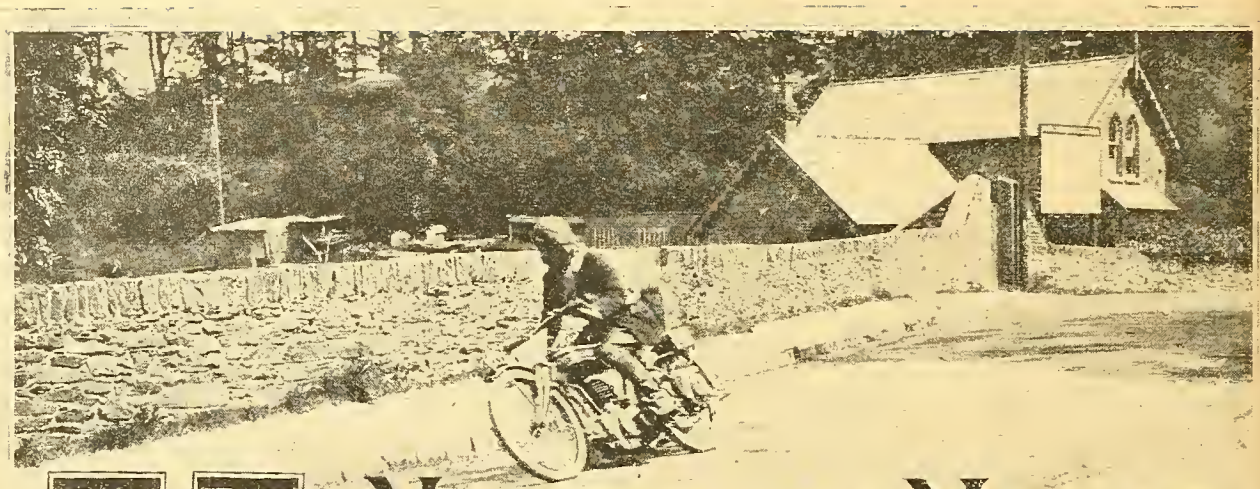
TT. NOTES AND NEWS.
IS DESIGN STAGNATING?
SIDECAR TOPICS.

The International Six Days Trial.

The Union Motocycliste Suisse, which is responsible for the organisation of the International Six Days Trial, is endeavouring to make arrangements so that the cost of living for competitors will not be in excess of, and perhaps not reach, £1 per diem.

Visitors to the Grand Prix can continue their journey direct to Geneva after this event, and arrive there comfortably in time for the International Six Days Trial.

Yorkshire Speed Championships.



Speed events on the sands are apparently very popular this year, and what promises to be a most successful and interesting meeting will be organised by the Middlesbrough and District M.C.C. on behalf of the Yorkshire Centre A.C.U. on July 9th at Saltburn Sands. There will be the twenty-mile Yorkshire championship races in 350 c.c., 600 c.c., and 1,000 c.c. categories and nineteen other short distance events catering for all classes. So hard, smooth, and consequently "fast" are these sands that a speed of 118 m.p.h. was attained during car trials held there before the war.

PRACTISING FOR THE T.T.

Two Sunbeam riders, Dance and Bennett, about to start for a lap round the course.

Another early morning scene. Spectators watching an Indian starting for the thirty-seven mile lap.

T.T. NOTES and NEWS

A Review of the Practising. Form of Men and Machines Improving Day by Day. Organisation Complete. Compiled from the Daily Reports of Members of "The Motor Cycle" Staff in the Isle of Man.

NEXT TUESDAY'S JUNIOR T.T. RACE IN A NUTSHELL.

DATE AND TIME OF START: 9.30 a.m., Tuesday, June 14th, 1921.
DISTANCE: Five circuits of 37 miles 6 furlongs each. Total distance, 188 miles 6 furlongs.
FIRST PRIZE: The Junior Tourist Trophy, to be held for one year. £40 in cash and special gold medal.
SECOND PRIZE: £20 in cash.
THIRD PRIZE: £10 in cash.
"THE MOTOR CYCLE" TROPHY for the fastest 250 c.c. machine (22 entries).
TEAM PRIZE: To be won by a nominated team, who must all finish the course within thirty minutes of the winner.
PRELIMINARY EXAMINATION: Monday, June 13th—
Nos. 1 to 25, at 9 a.m.; Nos. 26 to 50, at 10 a.m.; Nos. 51 upwards, at 11 a.m.

PREVIOUS WINNERS.

1920	*Cyril Williams, single-cylinder A.J.S. (74 × 81 mm. = 348 c.c.)*	..	*40.7 m.p.h.*
1914	*Eric Williams, single-cylinder A.J.S. (74 × 81 mm. = 348 c.c.)*	..	*46·6 ,,*
1913	*H. Mason, V twin N.U.T.-J.A.P. (60 × 61 mm. = 344 c.c.)*	..	*43·7 ,,*
1912	*W. H. Bashall, flat twin Douglas (60·7 × 60 mm. = 350 c.c.)*	..	*39·6 ,,*
1911	*P. J. Evans, V twin Humber (60 × 60 mm. = 340 c.c.)*	..	*41·5 ,,*

As recorded in the last issue of *The Motor Cycle*, practising for next week's Tourist Trophy races commenced at the beginning of last week. A good deal of work has been accomplished by the competitors for both races, and most, if not all, have now completed the minimum number of circuits to qualify for the races on Tuesday and Thursday next.

* * *

After a disappointing Whit week, due to the absence of steamship communication with the mainland, Douglas last week began to assume a somewhat jovial aspect, due entirely to the arrival of the army of motor cyclists who are taking part in the forthcoming races.

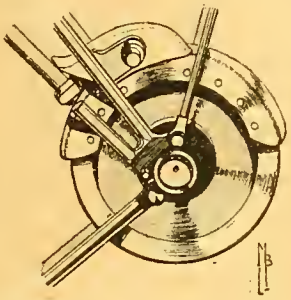
* * *

The Island as a whole is very pleased to have the motor cyclists back again once more, but it does not always show this pleasure in some of the absurd restrictions. Several of the visitors have been worried by the police for not having silencers, and some of the local motorists have been getting into trouble for not carrying horns. The same restrictions with regard to Sunday riding are still in existence.

* * *

Much indignation is felt amongst visiting motor cyclists at the new tax imposed upon them by the Insular Legislature. Last year they were charged 1s. This year the charge has gone up to 10s., and the increase is bitterly resented, all the more so that it is known that the increase is illegal at the moment, as the new Bill has not yet received the Royal assent. There is also much annoyance felt by the want of facilities for landing machines at the Douglas quayside. Although efforts were made by the Auto Cycle Union, *The Motor Cycle* and the local club, the Harbour Commissioners have so far done nothing to facilitate unloading from passenger steamers.

Porters have been engaged by the A.C.U. to meet every steamer landing in Douglas. They will be under the supervision of a guide, and their duty will be to carry all members' machines to the quay free of charge; but there will be no harm in recognising the porters' efforts in the usual way. These men will wear badges, and any complaints made to the local consul, or to the A.C.U. local office in Castle Mona Shops, will receive attention.



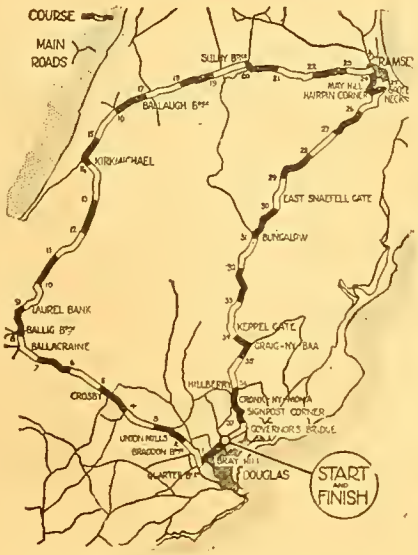
* * *

The Norton machines have been purposely varied this year for the peculiarities of the Manx course. The wheelbase has been shortened by about 1½in., and the top tube has been also shortened, bringing the riding position lower, and altogether giving it a more businesslike appearance. The handle-bars are straight and wide, and do not appear to be very popular with some of the men entered to ride, and alterations may be made.

T.T. Notes and News—

The course on the whole this year has been much criticised by the riders, particularly that part from the second iron gate on the mountain descent as far as Keppel Gate, where the surface had become very loose owing to the dry season. The Highway Board has done nothing at all to this section, although attention has been drawn to it. Subsequent storms, however, helped to improve this section.

* * *



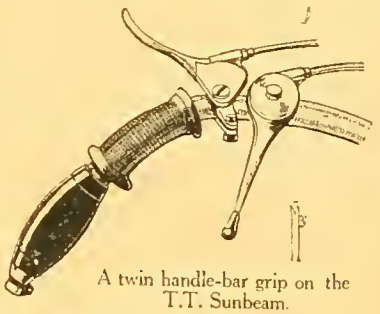
The front wheel brake fitted to the T.T. model Douglas; brakes of this type have been under test for some time.

Great Britain, Ireland, and U.S.A.

Although this year's T.T. is not of the international character the enthusiast would wish to see, international rivalry will not be entirely lacking, for America is meeting England, Scotland, Ireland, Wales, and the Isle of Man. Further, there are M.A.G. engines in the race, but one cannot help but regret that France, Italy, Belgium, and the overseas Dominions are not represented. Why do not some of the South African, Australian, and New Zealand clubs send over a rider to represent them in this blue riband event of the whole motor cycle world?

* * *

On our run round the course we noticed that between Craig-na-Ba and Ramsey the surface has been substantially repaired with an abundance of sharp-edged stones, which in their present state are very destructive to tyres. Nearer Douglas the surface has been tarred.



The Tourist Trophy course of 37 miles 6 furlongs, which has to be covered five times for the Junior event, and six times for the Senior.

PRACTICE ITEMS.

Every day the competitors improved their riding and their times; therefore, it is interesting to record some of the fastest times of the first two days, although at this stage no sensational speeds were attempted. The fastest time on the opening day was made by L. Mitchell (Norton), who covered the lap in 45m. 45s.—approximately 49 m.p.h.; while the following also made notable times:

	m.	s.	Approx. m.p.h.
T. C. de la Hay (3½ Sunbeam) ...	46	10	= 48½
D. M. Brown (3½ Norton)	49		= 46
A. Bennett (3½ Sunbeam)	47	30	= 47½
H. W. Hassall (3½ Norton)	47		= 47¾
D. S. Alexander (3½ Norton) ...	48	45	= 46
H. R. Davies (2¾ A.J.S.)	46	35	= 48

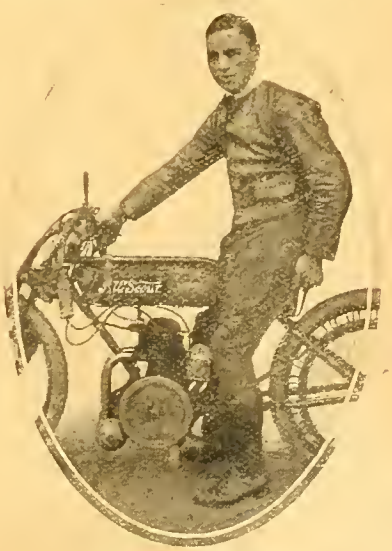
Indians, this year equipped with single-cylinder engines and Hutchinson tyres, modelled on the lines of those used for dirt track work in America, were running fast and quietly. A slight shortening of the wheelbase has improved the Norton's corner work. B.S.A.'s are said to be very fast up the mountain. They have already acquired quite a following of local experts, and, what is more to the point, their riders like them, and are at home on their mounts. Unfortunately, they have temporarily lost one of their team and a reserve rider, for Kuhn and Wood collided in an early practice spin, and the damage, though slight, necessitated medical treatment.

A twin handle-bar grip on the T.T. Sunbeam.

* * *

The Velocette and Omega are doing good times in the lightweight class, and the Ivys are very steady, and should do good team work.

* * *



F. Boulton (New Imperial) fell between Signpost Corner and Governor's Bridge at just the same spot as Chambers (A.J.S.) came off the day before. No serious damage was done, however, and a special warning has been arranged for the future.

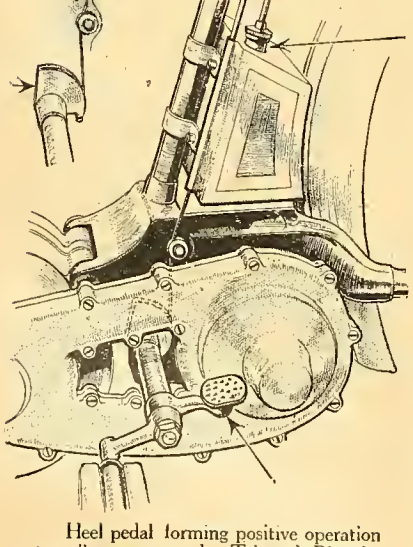
Norman Norris (Ivy).

N. E. Vicary (Ivy).

R. Weatherell (R.W. Scout).

RIDERS OF TWO-STROKE MACHINES IN THE 350 c.c. CLASS IN THE JUNIOR T.T.

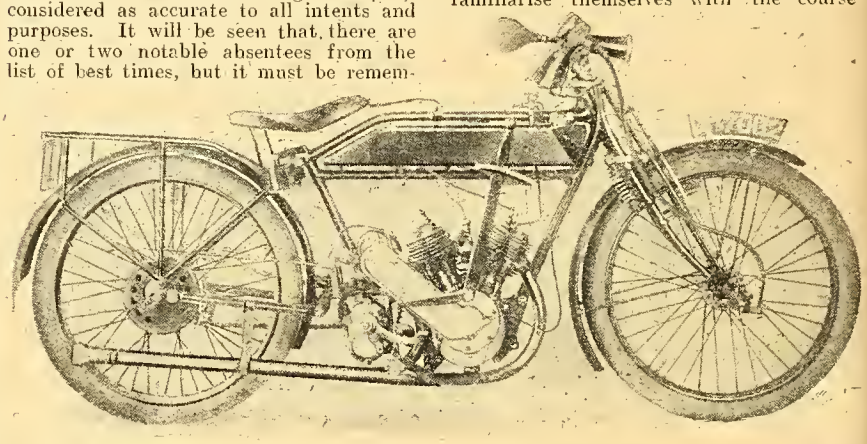
T.T. Notes and News—



The Tourist Trophy, presented in 1907 by the Marquis de Mouzilly St. Mars. The Junior Trophy is a duplicate presented by the same patron of the motor cycle movement.

The Manx people take a keen interest in the race, and are delighted that it is not to be postponed or cancelled. The juvenile portion of the population is especially interested—both boys and girls. The "little maids from school"—many more than three of them—haunt the garages where the competitors keep their machines, and worship the "boys" who are going to race. They know them all by their Christian names, and follow their fortunes most closely throughout the entire period of practice until the race itself, and then they take French leave from school, and go mad watching the race itself. This is what they did last year, and they are working themselves up to a high pitch of excitement already for the coming race now that it is definitely fixed that it will take place.

* * *



The organisation, in which the local club is bearing a most useful part, is very good, and there is hardly any part of the course which is not in more or less direct communication with the Douglas control. The only possible criticism relates to those who have completed a lap pulling up at the grandstand in the way of others passing through at speed. This matter, however, was immediately tackled by the capable A.C.U. officials, and the regulations were modified to meet the case.

Heel pedal forming positive operation for oil pump on the Triumph-Ricardo (Inset) Sector on footrest shaft indicated by dotted lines in main drawing

Lap Times.

No official lap times were issued, but those which we are able to give may be considered as accurate to all intents and purposes. It will be seen that there are one or two notable absentees from the list of best times, but it must be remembered that many star performers are not out to make sensational practice times. The following are the best lap times for the third morning's practice.

The T.T. model in which the James Cycle Co. are placing their confidence—the 3½ h.p. twin. J. Lidstone, G. A. Strange, and G. E. Stobart are the riders selected.

SENIOR.

	m. s.	m. s.
D. M. Brown (Norton)	45 12	
H. Hassall (Norton)	45 45	and 44 11
J. L. Mitchell (Norton)	44 22	
H. Le Vack (Indian)	46 53	and 45 28
J. Whalley (Sunbeam)	44 55	and 43 32
H. R. Harveyson (Indian) ..	46 5	
T. E. Greene (B.S.A.)	46 58	

JUNIOR.

A. H. Alexander (Douglas) ..	46 10	
G. Kelley (A.J.S.)	48 30	and 49 35
E. Williams (A.J.S.) ..	46 50	and 46 23
H. R. Davies (A.J.S.)	44 6	and 43 59

LIGHTWEIGHTS.

W. G. Harrison (Velocette) ..	54 33
N. Black (Omega)	53 15

Lap speeds in the Junior Class are so phenomenal that one is led to speculate on the chances of certain Junior machines in the Senior event.

Many Qualified Early.

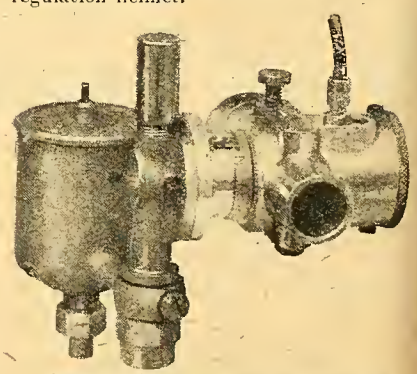
From the time they were introduced on the course, the Scotts were notably fast and very easy to start. The new Diamond o.h.v. machines, one of which has a three-speed gear, are also showing up well.

It was noticeable, in the earlier stages of the practising at least, that the old T.T. riders had the benefit of past experience on corners. Most of the newcomers were much too fast, and changed gear too late.

* * *

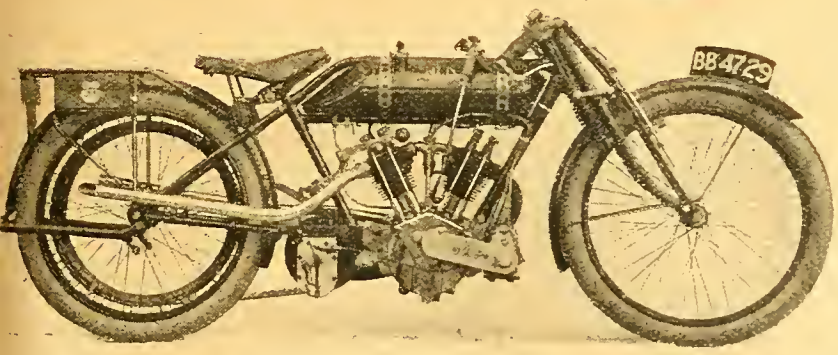
Among those who qualified for the races during the first few days were: Senior race—D. Brown (Norton), A. Bennett (Sunbeam), H. R. Harveyson (Indian), F. C. North (B.S.A.), H. W. Hassall (Norton), Reg. Brown (Sunbeam), J. W. Shaw (Norton), H. Le Vack (Indian), V. Horsman (Norton), H. Riddell (B.S.A.), and G. Dance (Sunbeam). Junior race—N. Black (Omega), A. Milner (Levis), A. Alexander (2¾ Douglas), W. H. Kelly (Ivy), J. S. Clayton (New Imperial), H. F. Harris (A.J.S.), E. Williams (A.J.S.), and H. R. Davies (A.J.S.). It will be seen that the Senior men qualified more rapidly than the Junior entrants.

* * *



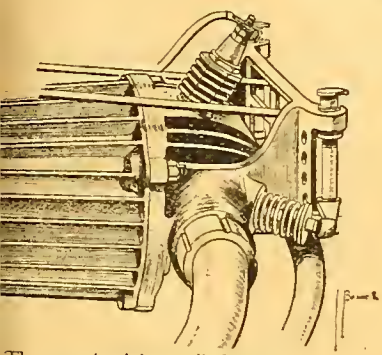
After the enthusiasm of the opening of the practising had worn off a little, those who had qualified settled down to familiarise themselves with the course rather than to achieve high speeds. Notwithstanding, the following times were made for the fourth morning's practice laps:

	M.	S.
T. C. de la Hay (3½ Sunbeam) ...	43	25
D. Brown (3½ Norton)	43	0
H. W. Hassall (3½ Norton) ...	43	34
F. W. Dixon (3½ Indian)	43	30
A. Alexander (2¾ Douglas) ...	47	30
J. L. Emerson (2¾ Douglas) ...	49	10
H. R. Davies (2¾ A.J.S.)	42	35

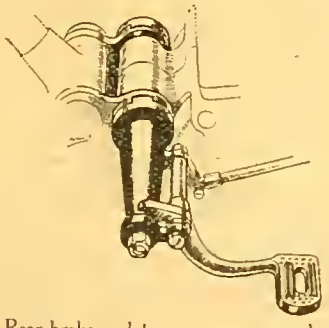


H. R. Davies's speed was really remarkable. The fastest Senior lap last year was 40m. 43s.

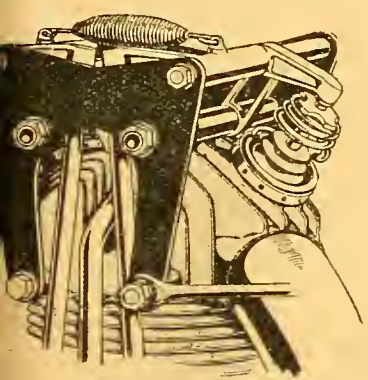
* * *



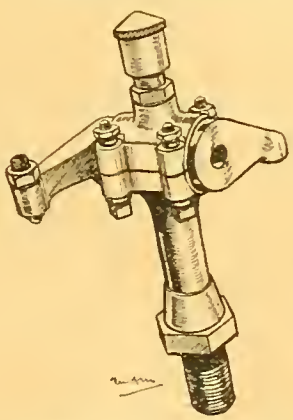
The Manx Club provided forty marshals for different parts of the course, and accidents, usual in the preliminary stages, were very few. One Douglas rider fell three times, but was saved by his regulation helmet.



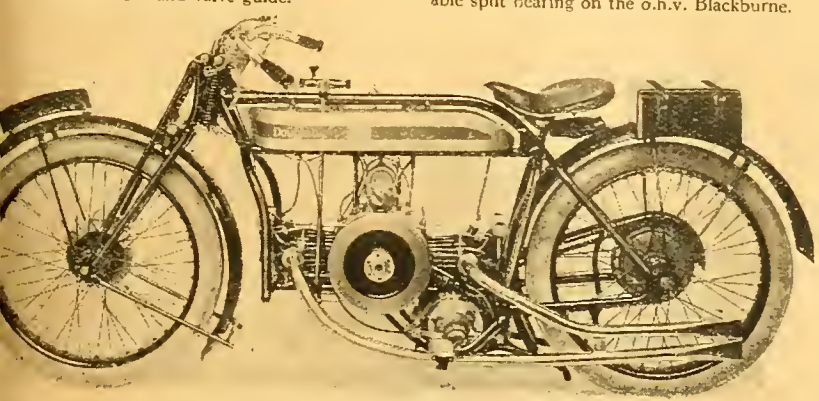
Many machines will use the single lever Cox Atmos carburetter, and a special model with aluminium body and a large choke has been produced. The large choke permits maximum power, but in other respects the carburetter is quite normal



An N.U.T. won the Junior race in 1913. This 2¾ h.p. model will endeavour to repeat the performance in 1921.



The new aluminium cylinder head on the 2¾ h.p. T.T. Douglas.



Rear brake pedal arrangement on the Triumph-Ricardo motor bicycle.

J.S. overhead valve gear, showing cooling ribs on head and valve guide.

The one-piece valve rocker and its adjustable split bearing on the o.h.v. Blackburne.

Very little external alteration from standard is observable in the T.T. Douglas, which is based upon the sports model. It has a four-speed gear box.

A late addition to the Junior entrants is Archie Jones, who was entered by Frank Whitworth, Ltd., to ride an Ivy in the Senior event. We understand that the A.C.U. has agreed to transfer this entry to the Junior race, so that there will be seven Ivys in this event.

* * *

There are rumours that P. Pike (of the Levis team) will not be able to ride owing to indisposition. In all probability one of the Levis reserves will take his place.

* * *

The A.C.U. banners, constructed of zinc letters on a wire netting background, serve their purpose admirably, and incidentally withstood the recent gales much better than the normal fabric type.

* * *

At the time of going to press, R. N. Judd, who is entered to ride a Velocette, is on the sick list.

* * *

A well-known figure in the Isle of Man, Mr. G. Brown, father of the well-known "Duggie," is much in evidence at the morning's practices.

* * *

One day last week Victor Horsman did a trial lap, then returned to Liverpool to attend to business matters, and was back in the Island the following night.

* * *

The B.S.A. team, under the management of Commander St. John, is quartered at Ramsey, as are the Scotts. Those who stay at Ramsey are permitted to start and finish their practice laps from that point.

* * *

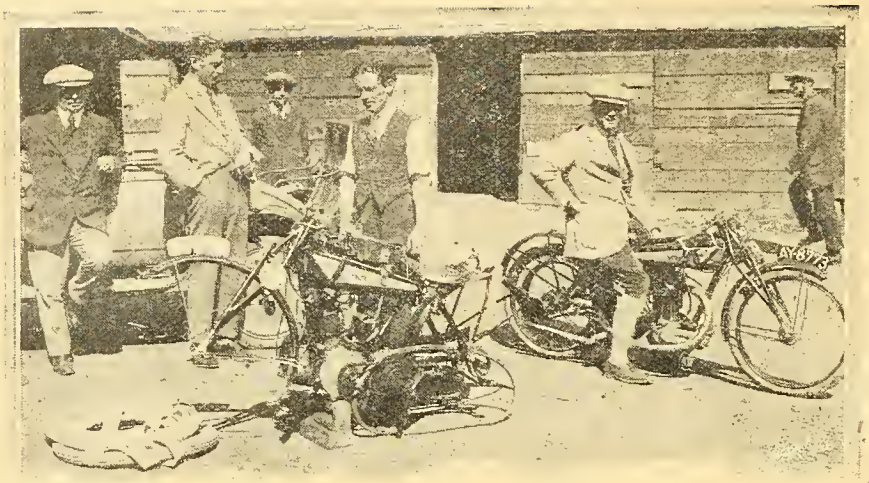
Quite a crowd turned out to witness the arrival of the new Triumphs.

* * *

Much good work has been put in by the Manx Motor Cycle Club, and particularly by Mr. H. M. Rogers, whose efforts are untiring.

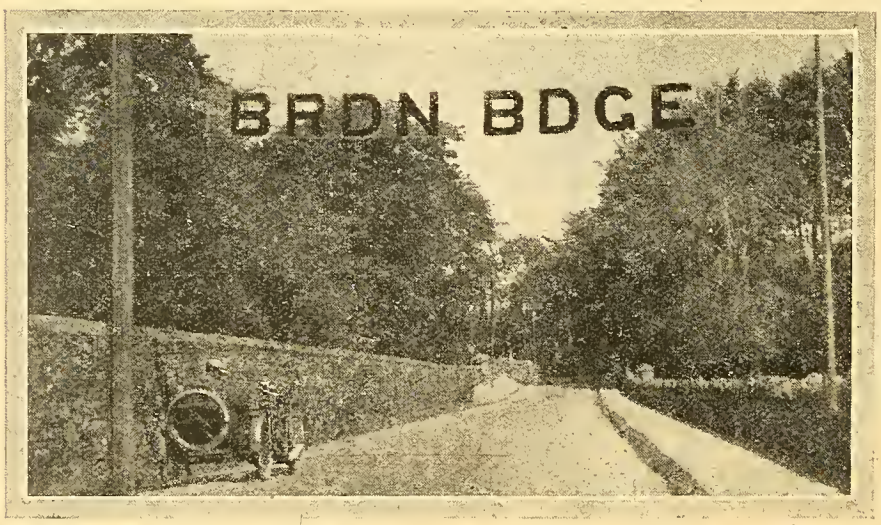
* * *

The paucity of sailings is a serious handicap to those who require spares from the works in a hurry.

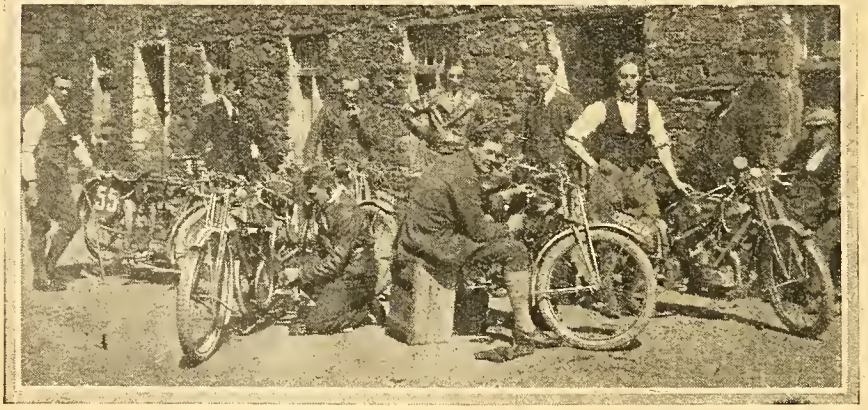


* * *

F. W. Dixon killed a bird on his way up to practice, and his Indian was about to carburet it when he arrived.



SURELY NOT A BLOW HOLE!



Although the majority of machines are tuned before reaching the Island, extraordinary care has been used in the final tuning up. Here is R. Russell Coes carefully examining the cylinder of his Indian.

At the Coulson depot. Longden is busy with the tyres of his twin. Kaye Don and H. Petty will be observed, the latter on his mount.

'Ware Bridge! One of the new type of signs around the course to indicate points where special caution is necessary. They consist of solid letters on wire netting—the sign depicted is near Braddon Bridge.

Final stages in the tuning of the Ivy machines. There will be seven of this make in the Junior race, as a Senior entry is to be transferred.

On different days we viewed the practising from various parts of the course, and one morning at Hilberry observed that the B.S.A. riders' corner work was very good on the whole; but Clapham (on the new Scott), the rider nominated by the Ilkley Club, was easily best.

* * *

Down the mountain Walker and Hassell attained terrific speeds on their Nortons: and Le Vack, too, was remarkably fast, and his cornering splendid.

* * *

At this time the weather was fine, and dust was giving the riders a great deal of trouble; and from Hilberry Corner, the dust clouds on the mountain were visible long before the machines appeared in sight.

* * *

Mechanical troubles are not so prevalent as usual, and have been chiefly of a minor character. The Norton riders reported stops through valve spring breakages.

* * *

After nearly a week on the Island, the speeds were reduced, for on the fifth day—a fine day, too—no better times than H. R. Davies's (2¾ A.J.S.) 42m. 35s. of the day before were made, although Hassall (Norton) improved his time by 19s. Bennett, of the Sunbeam team, covered the lap in 43m. 19s. Some of the other notable times were as follows:

	m.	s.
H. Le Vack (3½ Indian)	44	43
D. Alexander (3½ Norton)	43	25
G. Dance (3½ Sunbeam)	43	34
D. G. Prentice (2¼ New Imperial)	50	25
H. F. Harris (2¾ A.J.S.)	47	52
H. Thorpe (2¾ Douglas)	49	29

* * *

The new Diamond is a very racy looking machine. It has inclined overhead valves, the stems being lubricated by oil release from the timing gear. Ball bearings are fitted to the rocker gear and the chain transmission passes through a new Diamond three-speed gear box.

* * *

Once again the Dunlop *buffet* is a popular and well patronised feature of the early morning starts.

* * *

The Sun Vitesse is an interesting little mount, equipped with a rotary inlet valve forming an extension to the crankshaft. It is also fitted with a foot operated Moss three-speed gear.

* * *

Velocettes are attracting much favourable comment; they are fitted with clutches, and the flywheels are enclosed in aluminium cases.

* * *

By the end of last week nearly all the competitors and their mounts were in the Island. Some of the late arrivals were the Massey-Arrans and the Dot.

* * *

F. W. Dixon (Indian), who has already earned a reputation for his fine cornering, fell at Governor's Bridge, but without serious damage to himself or his mount. Notwithstanding, he almost made record lap.

* * *

At the end of last week, T. Mall (the Irish Sunbeam rider) took Hilberry too wide, and fell heavily. It is feared that he is out of the race.

T.T. Notes and News.—

On his first trip round the course on the Massey-Arran, Jack Thomas was inside qualifying time, despite the fact that owing to a slight defect the high gear could not be employed.

* * *

T. C. de la Hay takes his practice laps quietly and occasionally stops to light a cigarette.

* * *

Reg. Brown is recovering from the results of his fall, and as he was temporarily unable to ride he returned to the mainland for a few days.

* * *

The usual wild rumours are prevalent, and it is no uncommon thing to meet, in the best of health, the man who ten minutes before had been reported as in hospital with serious concussion.

* * *

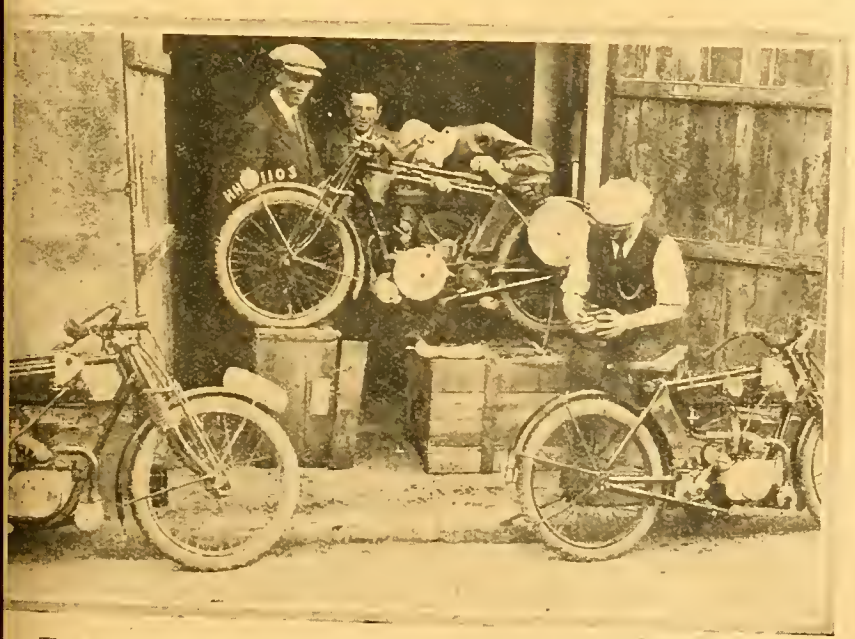
Most of the Levis team's early practice was done on old machines, but good laps have been completed, and they appear fast on the course.

* * *

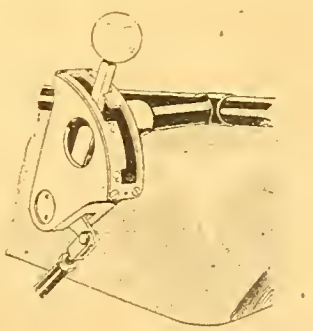
Two overhead valve Massey-Arrans, with Blackburne engines, and one with a s.s. J.A.P. will be run. All have new Burman light three-speed gears, and look very smart.

* * *

T.T. Douglas mounts will have a four-speed gear box for the race though much of the practice work has been carried out with the three-speed box. The new change speed lever works in a gate bolted to the timing gear cover. All oil is carried in a large sump directly below the crank-case and front cylinder, and the oil pump is coupled directly to its operating pedal. A. H. Alexander's machine has a Senspray carburetter and an exhaust lacketed inlet pipe.



Where hope runs high—the A.J.S. depot. Considering the fast lap times made by these little machines it is no wonder that optimism is the rule.



A comprehensive record of past T.T. races is included in the excellent programme of the 1921 event, published by the A.C.U., price 1s. Scoring sheets, speed, and distance tables are included for the present year's races.

* * *

The end of the first week's practice brought forth a series of minor accidents to men and machines. Minton fell at Keppel Gate, which necessitated a visit to the hospital, where it was found that no bones were broken. D. Alexander's front mudguard came adrift and jammed his front wheel, causing him to fall at speed, but he escaped with little hurt. His breeches, however, were torn to shreds. Among those who suffered mechanical trouble were Wood (B.S.A.), who broke a piston at Windy Corner, and Hadfield had his magneto go wrong.

The man who wins the T.T. is a genius in his particular sphere, and one thing that strikes the observer as he strolls from garage to garage is the infinite capacity for taking pains that some of the T.T. riders exhibit in the overhauling of their mounts; obviously there must be nothing slipshod in any part of the preparation. A scene at the Velocette depot.

The three-speed gate of the Velocette, specially designed for the T.T. models.

Some of the best laps were accomplished last Saturday, Dixon (Indian) making an unofficial record this year in 41m. 35s. Other Senior lap times were:

	m.	s.
A. Bennett (Sunbeam)	42	35
H. W. Hassall (Norton)	42	
J. Whalley (Sunbeam)	44	45

Among the Juniors the following made best times:

	m.	s.
A. Alexander (Douglas)	45	45
Eric Williams (A.J.S.)	47	2
V. Ollson (A.J.S.)	49	35

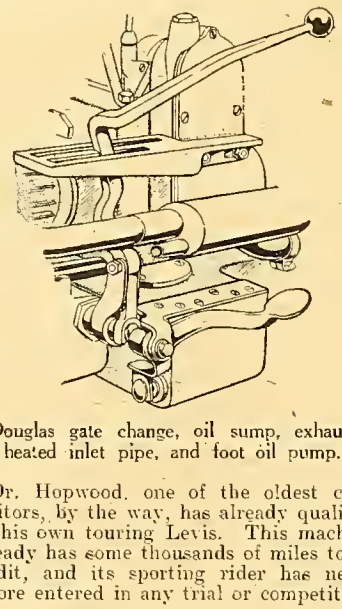
* * *

Just as he was expecting to get on the course again Judd's leg took a turn for the worse. He is suffering from a form of blood poisoning.

GOVERNOR'S BRIDGE. The worst bend on the whole course, and so acute that competitors have to slacken speed, and which actually makes it less dangerous than the other corners where high speeds are possible. It immediately precedes the finishing point.

LATE NOTES ON THE JUNIOR CONTESTANTS.

MANY hold the opinion that the Junior is a gift for the A.J.S. if all goes well, and go so far as to place the riders: 1, H. R. Davies; 2, E. Williams; 3, T. Sheard or Harris.



A SPORTING MEDICO.

Dr. C. H. Hopwood, who aspires to win *The Motor Cycle* Cup on his standard Levis, which has several thousand miles to its credit. He is seen operating upon the piston of his engine.

Ollson (on the standard side-by-side valve A.J.S.) is very consistent, and is comfortable on his machine. Douglas should be good runners-up, probably A. Alexander and Thorpe. Norris (Ivy) is going well at times, but is not consistent. Blackburnes are fairly fast, and Carey should be moderately well up. The 250 c.c. class is a hopeless guess. On form, M. Black (Omega) or B. Kershaw or D. Prentice (New Imperial) should win. All the 250 c.c. J.A.P.'s are good, and Denley (Velocette) can lap all day at 55-56m. per lap; but the Levises only obtained their new engines this week, and have been running last year's machines and faked standards.

New Hudsons and Martins had not arrived at the week-end. Most Levis times are not available, as they start from Peel, and time themselves. Some have only completed one lap, and others are running "dark." The Diamonds are as fast as anything in this class, but are having minor troubles, and have only completed a slow lap or two between them.

Personally, from observations on the course, we fancy Levis, if the new engines are all right. The Velocettes should finish well up. Of the J.A.P.'s those mentioned appear best, and N. Black rides well.

Douglas gate change, oil sump, exhaust heated inlet pipe, and foot oil pump.

Dr. Hopwood, one of the oldest competitors, by the way, has already qualified on his own touring Levis. This machine already has some thousands of miles to its credit, and its sporting rider has never before entered in any trial or competition.

* * *

The Ivy machines, under the charge of Howard Newman, have been suffering from lubrication troubles, due to oil congealing on cold mornings. These little machines have standard engines, and are standard in almost every respect.

* * *

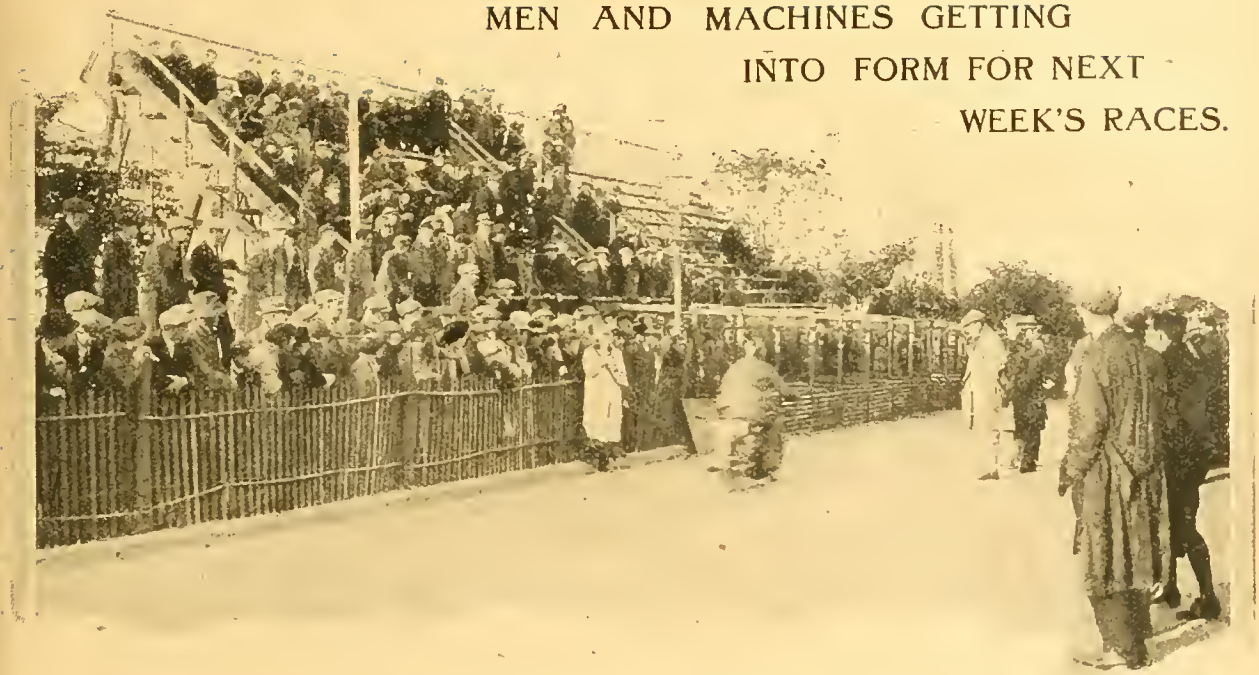
Sulby Bridge has been taking its toll, and several minor accidents have occurred there through the riders taking it too fast.

* * *

The Sunbeam organisation is perfect, and the men are doing excellent practice work. Though the lap times are consistently good, the team does not appear to be out for sensational times *yet!*

THIS WEEK'S FORM.

AT the time of going to press, the 350 c.c. A.J.S. machines were still the favourites in the opinion of those who have followed the practising in the Island, but the Douglas entry also had a strong following. On Monday H. R. Davies (A.J.S.) covered a lap in 46m., Eric Williams and Harris (on sister machines) in 47s. and 48s. respectively. A. Alexander (2¾ Douglas) has lapped in 43m., and Ollson (on the side-by-side valve A.J.S.), too, has been riding very consistently. The real T.T. Levis mounts have only been introduced to the course this week, and it is too early to judge their capabilities.



So far, the best Velocette time has been 53m., but the riders do not appear to be hurrying unduly, and apparently have speed in reserve.

S. Gill (Triumph) fell on Monday at Quarter Bridge, but was riding again on Tuesday. His front tyre rolled off the rim at Governor's Bridge.

This week some of the riders have discovered the penalty of scraping round the wall at Governor's Bridge, since Horton fouled it and fell on Monday, and all together they are quickly improving their cornering through continual practice, and the experience gained thereby.

There is no doubt that next Tuesday's race will be hardly fought, and that it will be exceedingly fast.

MEN AND MACHINES GETTING INTO FORM FOR NEXT WEEK'S RACES.

Greater enthusiasm than ever is being shown by the spectators in the various riders and their machines, and a big crowd gathers every morning to watch the practising.

TABULATED LIST OF THE 65 ENTRIES FOR THE JUNIOR T.T. RACE.

33 Four-stroke Singles. 10 Twins. 22 Two-strokes.

Twenty-two Competitors for "The Motor Cycle" Cup.

No.	Rider.	H.P. and Make.	No. of Cyl.	Bore and Stroke.	Cubic Capacity.
				mm.	c.c.
1	G. Browne	2¾ New Scale	1	71 × 88	348

LAST YEAR'S LAP POSITIONS AT A GLANCE.

FIRST LAP.—1, Eric Williams (A.J.S.); 2, H. R. Davies (A.J.S.); 3, N. F. Harris (A.J.S.).

SECOND LAP.—1, Eric Williams (A.J.S.); 2, H. R. Davies (A.J.S.); 3, N. F. Harris (A.J.S.).

THIRD LAP.—1, Cyril Williams (A.J.S.); 2, R. O. Clark (Levis); 3, J. S. Holroyd (Blackburne).

FOURTH LAP.—1, Cyril Williams (A.J.S.); 2, R. O. Clark (Levis); 3, J. A. Watson-Bourne (Blackburne).

FINAL LAP.—1, Cyril Williams (A.J.S.); 2, J. A. Watson-Bourne (Blackburne); 3, J. S. Holroyd (Blackburne).

On page 716 will be found a list of winners of previous Junior Tourist Trophy races.

Where to Learn the Results of the T.T. Races.

An Alphabetical List of Prominent Positions where "The Motor Cycle" Series of Telegrams will be displayed next Tuesday and Thursday.

MOTOR cyclists all over the country are interested in the Tourist Trophy races, but only a comparatively small percentage can afford the time to visit the Isle of Man in order to witness them. *The Motor Cycle* telegrams, which are displayed in prominent positions, have always been appreciated, for only by their aid are many thousands of readers able to follow the progress of the races by the positions of the riders at the conclusion of each lap. This year the list of depots, etc., where these telegrams will be displayed has been considerably extended, and would have been even larger, but for the fact that there is a limit to the number which can be handled expeditiously by the Post Office authorities.

In order that motor cyclists may follow the progress of the Tourist Trophy Races on Tuesday and Thursday of next week, "The Motor Cycle" is following its usual practice of circulating by telegrams all over the country the respective lap positions. A list of addresses where these telegrams will be displayed is appended.

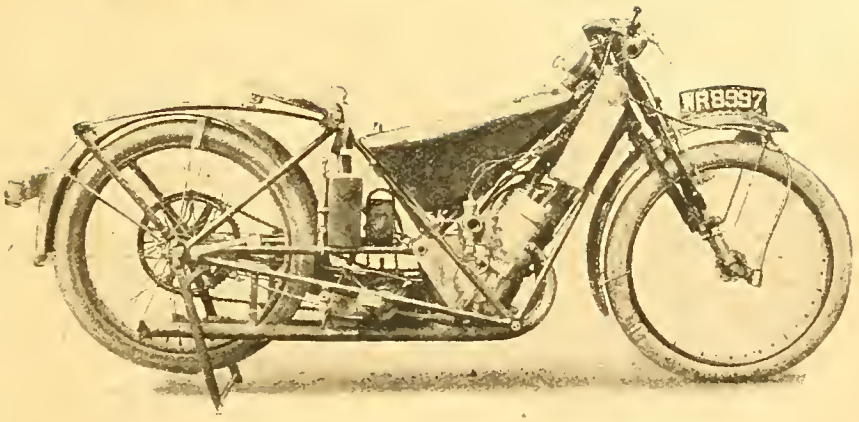
Aberdeen.—Cruikshank, 13-19, Rose Mount, Viaduct.
Ammanford (Carm.).—Harries, Ironmongers.
Bedford.—J. Crawley and Sons, Motor Engineers, 4, St. Mary's Street.
Belfast.—Palmer Tyres, Ltd., 75, Ann Street.
Birkenhead.—H. J. Marston's, 50, Argyle Street.
Birmingham.—Amac, Ltd., Aston Cross; Bacon and Wynn, Ltd., 870, Stratford Road; Colmore Depot, 31, Colmore Row; County Cycle and Motor Co., 307, Broad Street; H. Cutler and Son, Handsworth Motor Depot, 247, Soho Road; P. J. Evans, 81, John Bright Street; Iliffe and Sons, Ltd., Guildhall Buildings, Navigation Street; James Cycle Co., Ltd., 9, Broad Street Corner; The Premier Motor Co., Aston Road; Frank Whitworth, Ltd., 139, New Street.
Blackburn.—Slater's, 3, Lord Street (Market Place).
Blackpool.—Brown and Mallalieu, Metropole Garage, General Street.
Bolton.—Parker's, Bradshawgate.
Bournemouth.—P. W. Surplice, Poole Hill.
Bradford.—A. Hodgson, 10, Horton Road; Eric S. Myers, 52, Manningham Lane.
Brecon.—Fryer Bros. and Co., Motor Cycle Agents.
Bridgend (Glam.).—John Lewis, 35, Caroline Street.
Bristol.—The Leader Cycle and Motor Depot, 196, Cheltenham Road.
Burnley.—W. H. Harrison, The Motor House.
Bury.—Jack Pilling, 1, Rock Street.
Cambridge.—Herbert Robinson, Ltd., 32, Green Street.
Cardiff.—Alexander Thom, 201, City Road.
Carmarthen.—Carmarthen Motor Cycle and Cycle Car Club, Nelson Hotel.
Cheltenham.—H. E. Steel, Ltd., Automobile Engineers, High Street; A. Williams and Co., 19, Portland Street.
Chester.—Marston's, 26-31, Bridge Street.
Colwyn Bay.—Braid Bros., Midland Garage.
Coulsdon (Surrey).—Knight and Wheatley, 4, The Pavement.
Coventry.—*The Motor Cycle* Offices, Hertford Street.
Darlington.—Cleveland Car Co., Ltd., Grange Road.
Doncaster.—J. H. Wilkinson and Son, 19, Silver Street.
Dorchester.—W. G. Churchill, Motor and Cycle Engineer, The Grove.
Dublin.—J. J. Kelly, 27, Batchelor's Walk; F. A. Wallen, Trinity Street, Garage.
Dudley.—Whorton and Christopher, 220, Wolverhampton Street.
Dunfermline.—D. R. Engineering Co., Ltd., Hospital Hill.
Eccles.—Barlow and Sons, 174-6, Monton Road, Monton.
Edinburgh.—Rossleigh, Ltd., 32, Shandwick Place; Alexander and Co., 113-115, Lothian Road.
Exeter.—P. Pike and Co., Ltd., The Garage, St. Thomas; Maude's Motor Mart,, 100, Paris Street.
Glasgow.—Alexander and Co., 272, Great Western Road; Bell Bros., 238, Great Western Road; V. Jennings and Co., Ltd., 86, Mitchell Street.
Gloucester.—W. B. Gibb, 100, Northgate Street.
Granton-on-Spey.—W. G. Donaldson, 26, High Street.
Gravesend.—The Premier Motor Garage, 25a, Stone Street.
Grimsby.—Jas. Plastow, 13, Osborne Street.
Halifax.—Halifax Motor Exchange, 25, Horton Street.
Hereford.—James Fryer, Ltd., No. 2 Garage, Commercial Road.
Huddersfield.—Earnshaw and Co., 10, Cloth Hall Street.
Hull.—Gray Bros. and Kemp, Ltd., 362, Anlaby Road; Morrell and Co., Ltd., Jameson Street.
Ipswich.—Egertons, Engineers and Coachmakers, Northgate Street.
Kettering.—Harry Taylor, Cycle Agent, Montague Street.
Leeds.—W. Mitchell, The Motor House, Roundhay Road; Palmer Tyres, Ltd., 1, New York Road.
Leicester.—The Colmore Depot, 62, High Street; Tom Cann, Ltd., 88, Woodgate.
Liverpool.—Colmore Depot, 24, Paradise Street; Victor Horsman, Ltd., 7, Mount Pleasant; J. Blake and Co., 110, Bold Street.
Llandrindod Wells.—Tom Norton, Ltd., The Automobile Palace
London.—Auto-Cycle Union, 83, Pall Mall, S.W.1; Automobile Association and Motor Union, Fanum House, Whitcomb Street, W.C.2; The Allen-Bennett Motor Co., Ltd., 9, Royal Parade, London Road, West Croydon; Benetfink and Co., Ltd., 107, Cheapside, E.C.2; Burlington Motor Cycle Co., Ltd., 7, South Side, Clapham Common, S.W.4; Coppen, Allan and Co., 89, Great Portland Street, W.1; Douglas Motors, Ltd., 39, Newman Street, W.1; Eagles and Co., 275, High Street, Acton, W.; The Eastern Garage Co., 418, Romford Road, Forest Gate, E.7; W. H. Elce and Co., 15, Bishopsgate Avenue, Camomile Street, E.C.3; A. W. Gamage, Ltd., Holborn, E.C.1; The General Motor Cycle Service, 95, Dartmouth Road, Forest Hill, S.E.23; Godfrey's, Ltd., 208, Great Portland Street, W.1; James Grose, Ltd., 4, Old Jewry, Cheapside, E.C.2; James Grose, Ltd., 8, New Bridge Street, Ludgate Hill, E.C.4; James Grose, Ltd., 255, Holloway Road, N.17; Hutchinson Tyres, 70, Basinghall Street, E.C.2; Jones's Garage, The Broadway, Muswell Hill, N.10, and Jones's Garage, Woodside Parade, North Finchley, N.; D. C. Lamb, 151, High Street, Walthamstow, Essex, and 50, High Road, Wood Green, N., and 387, Euston Rd., N.W.1; Longman Bros., 17, Bond Street, Ealing Broadway, W.5; J. L. Love and Co., 21, Park Road, Bromley, Kent; Maude's Motor Mart, 100, Great Portland Street, W.1; Norman Reid, Barrett and Co., Ltd., 6, Warwick Street, Regent Street, W.1; Phelon and Moore, Ltd., 4, Berners Street, W.1; Robertson's Motors, Ltd., 157b, Great Portland Street, W.1; S. E. Clapham (Motors), 27, Stockwell Street, Greenwich, S.E.10; The Service Co., Ltd., 289, High Holborn, W.C.1; H. Taylor and Co., Ltd., 52, Sussex Place, South Kensington, S.W.7, and 21a, Store Street, Tottenham Court Road, W.C.1; Turner's Stores, 180, Railway Approach, Shepherd's Bush, W.12; F. J. Youngs, 2, The Parade, High Road, Kilburn, N.W.6; Palmer Tyres, Ltd., 119, Shaftesbury Avenue, W.C.2; Iliffe and Sons Ltd., 20, Tudor Street, E.C.
Luton.—Dickinson and Adams, Motor Engineers, High Town Road; Geoffrey S. Davidson, Ltd., Bute Street.
Maidstone.—Rootes, Ltd., Len Engineering Works.
Malvern.—W. and B. Woodyatt, Ltd., The Garage.
Manchester.—The Colmore Depot, 3, Peter Street; Tom Davies, Deansgate; The Ruby Cycle Co., Ltd., 162, Deansgate; J. W. Gourlay, 3, Burgon's Building, Fallowfield; Iliffe and Sons Ltd., 199, Deansgate, Manchester.
Mansfield.—Reg. Lucas, Esq., The Garage, Brunt's Street.
Middlesbrough.—Fred W. Dixon, Park Garage, Linthorpe Road.
Neath (Glam.).—Central Motor and Motor Cycle Garage, London Road.
Newcastle-on-Tyne.—Travers, Ltd., 77, Pilgrim Street; Grimshaw Leather and Co., Ltd., Barras Bridge; The Percy Motor Co., Ltd., 72, Northumberland Street.
Norwich.—R. O. Clark, 2a, Upper King Street.
Nottingham.—Whitfield and Mosley, Carrington Street; Palmer Tyres, Ltd., Greyfriar Gate.
Nuneaton.—Sam Robbins, Ltd., Leicester Road.
Peterborough.—Turnhill, North and Co., 55, Broad Street.
Perth.—Macfarlane's Motor Depot, 22, South Methven Street.
Plymouth.—P. Pike and Co., Ltd., 33, Union Street.
Pontymister (Mon.).—Marsh's S.P.Q.R., 131, Commercial Street, Pontymister, Risca, Mon.
Portsmouth.—Palmer Tyres, Ltd., 49, High Street.
Preston.—Bradshaw's, Fishergate, Preston; Bert Houlding, Marks, and Rigby, Ltd., 215, Lancaster Road.
Reading.—H. Julian, 84, Broad Street.
Rugby.—Sam Robbins, Ltd., Bilton Road.
Ryde.—Downing and Donovan, Motor and General Engineers, Union Street.
St. Albans.—Dudley R. Clarke, 98, London Road.
St. Ives (Hunts.).—Parker and Son, Station Road Garage.
Sheffield.—F. B. Roper, 166, London Road; Henderson Sidecars, Aero Works, Fitzwilliam Street.
Sherborne.—Dyer's Motor and Cycle Works, The Parade.
Shrewsbury.—J. C. Pickering, 49, Mardol; James' Garages, Ltd., 8, Mardol Head.
Southport.—H. F. Brockbank, 58, Lord Street; R. Bamber and Co., Ltd., 2, East Bank Street.
Stevenage (Herts.).—Hall's Garage, Ltd.
Stockport.—Talbot Garage, Ltd., Mersey Square.
Sunderland.—Grimshaw Garage.
Tadcaster.—Frederick Snape and Co., Bridge Street.
Taunton.—Hewin's Garages and Engineering Co., Ltd., Corporation Street.
Torquay.—Nunn, Farmer and Co., 73, Union Street.
Tunbridge Wells.—R. Carey, 16, Crescent Road; Read Bros., 82, London Road, Southborough; G. E. Tunbridge, 2, Vale Road.
Turriff (Aberdeenshire).—William Dickie.
Walsall.—The Colmore Depot, Stafford Street; Maude's Motor Mart, The Walsall Garage, Wolverhampton Street.
Weston-super-Mare.—D. Read and Co., Orchard Street.
Wetherby (Yorks.).—Frederick Snape and Co., 22, North Street.
Wisbech (Cambs.).—Crabtree and Sons, Ltd., Motor Engineers.
Wolverhampton.—Cyril Williams, Chapel Ash Depot.
Worcester.—Eric Williams, Ltd., The Motor Cycle Depot; W. J. Bladder, 52, Sidbury.
Wrexham.—North Wales Motor Exchange.
York.—Smith Bros., Walmgate.
Yeovil.—James Moffat, Town Hall Garage.

LONDON-COVENTRY-LONDON.

"A SURPRISINGLY severe run" was the consensus of opinion at the finish of the North-west London Motor Cycle Club's annual London-Coventry-London Reliability Trial held on Saturday last.

This twelve-hour trial, previously noticeable on account of an entire absence of severe gradients, included this year a "colonial section" remarkable for the severity of the hills, the narrowness of the roads, and the appalling surfaces. The route, starting at Hampstead, was *via* Rickmansworth, West Wycombe, where the colonial section started, Kop Hill, Aylesbury, and Banbury to Coventry, and back *via* Dunstable to the finish at Jack Straw's Castle, Hampstead. The entry included twelve motor cyclists.

The first event of interest was the arrival not less than half an hour early at the West Wycombe check of C. C. Labin (4 Indian Scout) and another rider travelling in the wrong direction! The first hill in the non-stop colonial section accounted for several failures, C. H. Auty (2¼ James), Miss L. Buchan (2¾ Douglas), and P. H. Goddard (6 Enfield sc.), all coming to rest, and needing considerable assistance to reach the top. Kop Hill was likewise responsible for several failures.



B. E. Belfield (7 A.J.S. sc.), to obviate the possibility of tyre trouble, had cunningly fitted a Rapson unpuncturable pneumatic tyre to the rear wheel, but stopped with a flat tyre near Banbury! All the riders appeared at the finish, with the exception of the plucky Miss L. Buchan, who, riding a solo Douglas, suffered from a leaky petrol tank in the neighbourhood of Daventry.

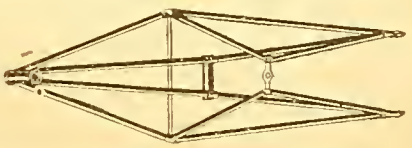
T.T. SCOTTS.

Aluminium Engine, Four Speeds, Two-spark Magneto.

A PREVIOUS winner of the Senior event should have a sound idea of what is necessary for the Isle of Man course, and since H. O. Wood is responsible for the 1921 T.T. Scott it will be hardly surprising if the new machine develops a large backing for the forthcoming race. Engine, frame, and gears are entirely new, though reminiscent of Scott design.

To begin with, the twin-cylinder engine has a bore of 73 mm. and a stroke of 62.5 mm. Cast iron liners, fixed in the main aluminium crank case and water jacket casting, form the cylinders, and a single aluminium casting serves as a head for each cylinder and the necessary water jacket. For these heads, a copper and asbestos gasket is used at the joint. The head may be removed without disturbing any other part of the machine. In addition to these features the transfer passages are comprised in the main casting, and a separate exhaust pipe leads from each cylinder to the rear of the machine. Large water pipes are used, and the return extends over the whole front of both cylinder barrels.

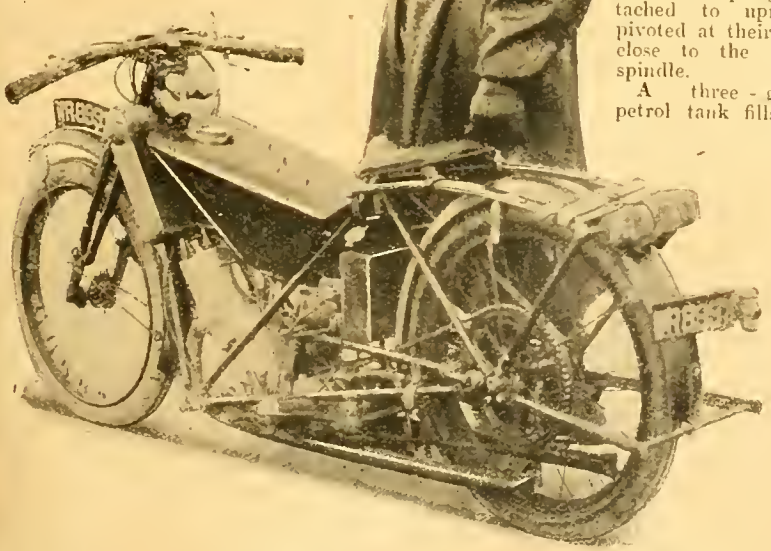
Practically constructed throughout of aluminium, the Scott engine strikes a new note in two-stroke engine design. The water-cooled cylinders are of aluminium with cast iron liners.



Four-speed Gear.

Following Scott practice, two chains convey the drive to a normal Scott two-speed gear, but the usual place of the rear driving sprocket is occupied by a gear wheel which drives the layshaft of a two-speed gear box. The rear driving sprocket lies between the high and low mainshaft gear wheels, to either of which it may be locked by means of a separate foot control through the medium of delay action operating gear. By this means four speeds are obtainable, the ratios being in the proportion of 3.3 to 1, 4.75 to 1, 4.95 to 1, and 6.4 to 1.

Both engine and gears are mounted on a sub-frame which may be readily detached from the main frame, which, as might be expected, is an open one of triangular construction, but a considerable increase in lateral rigidity has been obtained by disposing each side of the duplex frame so that no two tubes lie in the same plane, the upper portion of the frame being considerably narrower than the lower portion.



Suspended at the peak by a coil spring the pan seat is carried on two long laminated springs attached to uprights pivoted at their base close to the wheel spindle.

A three-gallon petrol tank fills the major part of the open frame, and a half-gallon oil tank is carried in front of the rear mudguard. Lubrication, it must be added, is entirely automatic, and is operated by crank case vacuum. Quite a novel feature is the substitution of a "decelerator" for the half compression device, the normal half compression lever on the handle-bar operating the switch as usual, and also serving to close the throttle independently of the main carburetter control setting.

Diagrammatic plan of the Scott T.T. frame, showing the arrangement of tubes.

An Amac carburetter, Lucas two-spark magneto, and 650×65 Palmer tyres, complete a very interesting specification.

Capt. Clarence P. Wood, well known as a consistent Scott competitor in trials, and one of the favourites for the T.T. race. H. O. Wood (known to his intimates as Tim Wood), the designer of the new T.T. Scott, and winner of the 1913 Senior event, when he averaged 48·28 m.p.h., is his elder brother.

HOLLAND v. GT. BRITAIN.

THE A.C.U. has proposed to the Dutch motor cyclists that the annual International Team Trial be postponed from August 1st to September 26th. This is in order to have more time thoroughly to organise the programme for the entertainment of the visitors from Holland, who, last year, so royally entertained the British team.

A Midland course of about 150 miles will probably be chosen, and the formation of the British team is now in progress. The A.C.U.—and all interested in our national reputation as motor cyclists—are desirous of having the finest possible team to represent them, and applications for the honour should be made at once to Mr. C. A. Edwards, the hon. sec. to the organising committee, 61, Kenilworth Gate, Putney, London, S.W.15.

The entry fees are 7s. 6d. for private owners and 21s. for trade riders. The rival teams will be made up, as last year, of three private owners and three trade riders on solo machines under 500 c.c.; three private owners and three trade riders on solo machines over 500 c.c. In the sidecar class there are also three each private owners and trade riders, totalling fifteen.

COVENTRY-TORQUAY AND BACK.

TRAVEL-STAINED and tired, sixteen motor cyclists completed on Saturday evening the twenty-four hour run of the Coventry and Warwickshire Motor Club. A goodly crowd saw the riders off to Torquay the previous evening, and an equally interested throng applauded the survivors as they arrived back, for this was the first twenty-four hour run of the Coventry Club. The chief award was the Godiva Golden Goblet, and the conditions called for the very strict timekeeping to within five minutes early or late at any point of the route. It rained on Friday evening soon after the start, and continued until after Bath, where supper was arranged at the York House Hotel. Here F. Allen (Rover sc.) retired due to water having short-circuited the dynamo and wires—a trouble experienced by one of the car drivers in the contest.

Torquay was reached *via* Glastonbury, Wellington, Collumpton, and Exeter, and after breakfast at the Oddicombe Beach Pavilion, the return trip was commenced *via* the same route. Two more riders dropped out, viz., W. A. Weaver (Coventry Victor sc.) and E. S. Astley (Rover sc.), and two of those who continued experienced the misfortune of their sealed watches stopping. Truly, motor cycles are becoming more reliable than timepieces. After tea at Cheltenham, the run home was easy, but a final secret check caught several napping. The sixteen survivors of the nineteen starters—an excellent record for a straightaway run of 388 miles—were :

F. A. Marshall (4½ Humber).
S. A. Thomson (4 Triumph).
R. A. Player (4 Triumph).
T. H. Meakin (4 Triumph).
R. Wright (4 Triumph).
L. Crisp (4½ Humber).
D. Atkin (5 Rover sc.).
C. N. Green (5 Rover sc.).
R. B. Roberts (4 Triumph sc.).
W. Hazlewood (8 Hazlewood sc.).
H. A. Smith (4 Triumph sc.).
F. Yates (4½ Humber sc.).
H. R. Caswell (5-6 Coventry Victor sc.).
R. Grindlay (4½ Humber sc.).
Fell Smith (8 Rex sc.).
T. R. Gibbons (6-8 Acme sc.).

OXFORD UNIVERSITY v. OXFORD CITY.

AFTER soundly beating the Banbury Motor Club a week before, the Oxford M.C. were again victorious in a somewhat more difficult contest with the Oxford University M.C.C. at Kop Hill on Saturday.

Both clubs having previously staged climbs there were familiar with the hill, but, owing to the dangerously loose and uneven surface, no very sensational times were clocked. As was expected, Riddoch (on his big Zenith) made fastest time of the day (39.4 secs., equalling a speed of 46.5 m.p.h. from a standing start); but the two bonus marks for this performance were not enough to balance the overwhelming superiority of Kimber's Levis and Tollady's Velocette in the lightweight classes.

A Fast Sidecar Single.

Again, although the 'Varsity club, represented by Riddoch, made fastest sidecar time, L. Avery's 7-9 h.p. Harley-Davidson and N. U. Young's 4 h.p. Triumph were second and third, and secured between them another four marks for the city. The latter rider, who, incidentally, drove far and away the fastest mediumweight sidecar outfit, has only one arm, and consequently deserves great praise for his fine showing on a hill which, on their own confession, thoroughly frightened the majority of the solo competitors.

Competition was very keen, indeed, in the 650 c.c. solo class, but it looked as if the first three places were going to the city club until Harwood, on his hybrid Pegasus-Jap, seized the opportunity of a lull in the last car class to make a couple of fast ascents and credit the University with a welcome point for third place.

Excluding Class 7, the respective totals of the two clubs are as follows : Oxford M.C., 36 points; Oxford University M.C.C., 18 points. Detailed results follow.

CLASS 1 (650 c.c. SIDECARS).—1, N. V. Young O.M.C. (4 Triumph), 67.8s.; 2, A. F. Scroggs, O.U.M.C.C. (3½ Sunbeam), 74.8s.

CLASS 2 (UNLIMITED SIDECARS).—1, I. P. Riddoch, O.U.M.C.C. (8 Zenith), 46.2s.; 2, L. Avery, O.M.C. (7-9 Harley-Davidson), 56.4s.; 3, N. V. Young, O.M.C. (4 Triumph), 65.4s.

CLASS 3 (250 c.c. SOLO).—1, Cecil Kimber, O.M.C. (2¼ Levis), 55s.; 2, J. W. Tollady, O.M.C. (2¼ Velocette), 56.8s.; 3, J. M. Macintyre, O.U.M.C.C. (2¼ Velocette), 95.4s.

CLASS 4 (350 c.c. SOLO).—1, Cecil Kimber, O.M.C. (2¼ Levis), 56.6s.; 2, J. W. Tollady, O.M.C. (2¼ Velocette), 57.2s.; 3, T. G. Lindsay, O.U.M.C.C. (2¾ Verus-Blackburne), 63s

CLASS 5 (UNLIMITED SOLO).—Best time of two runs: 1, I. P. Riddoch, O.U.M.C.C. (8 Zenith), 39.4s.; 2, E. J. Cross, O.M.C. (7-9 Indian), 40.4s.; 3, R. W. H. Davies, O.U.M.C.C. (8 Zenith), 43.6s.; 4, A. D. Cruikshank, O.M.C. (3½ Norton), 45.4s.

CLASS 6 (650 c.c. SOLO).—1, A. D. Cruikshank O.M.C. (3½ Norton), 45.8s.; 2, M. Pearson, O.M.C. (3½ Norton), 48s.; 3, J. E. G. Harwood, O.U.M.C.C. (3½ Pegasus-Jap), 48.4s.; 4, H. S. Bayley, O.M.C. (3½ Sunbeam), 49.8s.

CLASS 7 (1,500 c.c., CYCLE CARS OR LIGHT CARS).—1, H. R. Godfrey, O.M.C. (8.7 G.N.), 49.4s.; 2, G. L. Hawkins, O.M.C. (8-7 G.N.), 50.6s. No O.U.M.C. starters in this class.

Week-end Club Events.

June 11.—Bristol M.C.C. Club Run to Sidmouth.
June 11.—Kidderminster M.C.C. Flexibility Hill-climb.
June 11.—Birmingham M.C.C. Gymkhana.
June 11.—Doncaster and District M.C.C. Hill-climb.
June 11.—North-West London M.C.C. Surprise Run.
June 11.—Luton and South Beds. A.C. Speed Trials.
June 11.—Leeds and District M.C. Slow Hill-climb.
June 11.—Bridgwater and District M.C. and L.C.C. Club Run and Flexibility Hill-climb.
June 11.—Oxford M.C. Reliability Trial.
June 11.—Standard M.C.C. (Coventry). Non-stop Trial.
June 11.—North Lindsey A.C. Reliability Trial.
June 11.—Surbiton and District M.C.C. Butler Cup Trial.
June 11.—Middlesbrough and District M.C. Hill-climb on Yearly Bank.
June 11.—Glasgow M.C.C. Twelve Hour Open Reliability Trial.
June 11.—Wallington and District M.C. and L.C.C. Night Trial.
June 11-12.—North-West London M.C.C. Camping Week-end.
June 12.—Wakefield and District M.C.C. Reliability Trial.
June 12.—Leeds M.U. Reliability Trial and Hill-climb.
June 12.—Bishop Auckland and District M.C. Barker Cup Trial.
June 12.—Essex M.C. Picnic.
June 12.—Barrow and District M.C. Reliability Trial.
June 12.—Grantham and District M.C. and L.C.C. Hill-climb and Trial.
June 12.—Rochester, Chatham, and District M.C. and L.C.C. Club Run to Whitstable.
June 12.—Brighton and Hove M.C. Social Run to Henfield and Gymkhana.

A Section devoted to Club Announcements will be found on Supp. xliii.

THE ORIGIN OF THE PNEUMATIC TYRE.

Last week *The Irish Cyclist and Motor Cyclist* attained its thirty-sixth anniversary, and celebrated the occasion by issuing a special number in which Mr. J. B. Dunlop, the eighty-year-old veteran who invented the pneumatic tyre, gives the true version of its origin.

DUNLOP INNOVATIONS.

The Schrader valve, described on page 703, has been adopted as standard by the Dunlop Co. This was decided at a special meeting held last Thursday, when it was announced that a new type of Magnum tyre (of 26×2½in., 26×3in., and 28×3in.) is now available. A special rim for this tyre has also been introduced, which, it is claimed, is not only better as regards the arrangement of spokes than previous types, but has a bead sufficiently heavy in proportion to the size of the tyre.

ENTRIES FOR THE GRAND PRIX.

To date there are forty-nine entries for the Motor Cycle Grand Prix, made up as follows : 250 c.c. class, nine ; 350 c.c. class, eight ; 500 c.c. class, thirty-two. British riders pilot teams of B.S.A.'s, Douglases, and Nortons in the latter class, and three Triumphs have also been entered, but their riders have not yet been nominated. There are also three Douglases and two Velocettes in the "junior" class. The race takes place at Le Mans on July 24th.

THIS YEAR'S ILKLEY TRIAL.

Arrangements for that most sporting trial, the open event of the Ilkley M.C. and L.C.C., to be held on July 16th, are now well in hand. There will be no fewer than seven trophies, but that these will be earned is indicated by the fact that it has been found necessary to set separate routes for solo riders and sidecarists at some of the more difficult points. Mr. H. W. Sellers, Langley Avenue, Bingley, is the secretary for this event.

COMPETITIONS ABROAD.

In September the Czech Club will hold a race for light cars, cycle cars, motor cycles, and scooters over a 200 kilometre circuit near Prague.

SPLIT LEGGINGS.

"I know of nothing to beat it, and it deserves to be better known."—*"Ixion" in "Motor Cycle" of 17th March in describing the "Split" Overalls.*

The suit is put on and off in a few seconds, no pulling over dirty boots, nor soiling your hands. They open right down outside of leg, and are fastened with two springs. There is absolute freedom and comfort, combined with neatness, and they are guaranteed to keep you dry under all conditions of weather. This is the only suit that kept out the terrible wet weather in the Reliability Trials at Copenhagen, when clothing was included in these trials.

MADE IN TWO QUALITIES.

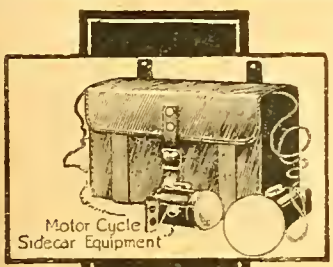
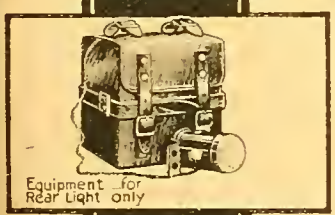
StyleCraft
Guaranteed Men's Wear

For Young Men and Those who Feel Young

SENSIBLE men besides inquisitive children ask questions. *Why* are "StyleCraft" sports jackets and trousers sold in every town with a population of 2,000 or over? *Why* are we able to say: "If this garment fails to satisfy or wear we will replace it free through your dealer"? *Why* are "StyleCraft" jackets and trousers more popular in these days of high prices than ever before? Sensible men do more than ask these questions—they wear "StyleCraft"



PRICES:



Men's Sports Coats	50/- to 90/-
Men's Grey Flannel Trousers	21/- to 52/6
Men's White Flannel Trousers	21/- to 50/-
"STYLECRAFT JUNIOR"

PURCHASE BY EXTENDED PAYMENTS

If you are not desirous of paying cash for your motor cycle, we can offer you a simple method of purchasing by Extended Terms spread over 12 months. This does not require a large capital outlay and immediate delivery is given of machine. We require one-quarter of the total amount cash, and the balance can be paid in twelve equal monthly instalments. A larger amount cash deposit can be paid if desired, thereby reducing the monthly payments.

ONLY A SMALL CHARGE IS MADE ON THE UNPAID BALANCE.

WRITE TO-DAY for list of machines available for immediate delivery, which includes:

DOUGLAS, B.S.A., ROVER, ENFIELD, A.J.S., TRIUMPH, MATCHLESS, LEA-FRANCIS, QUADRANT, NEW IMPERIAL, CALTHORPE, SCOTT, BAT, ZENITH, etc.

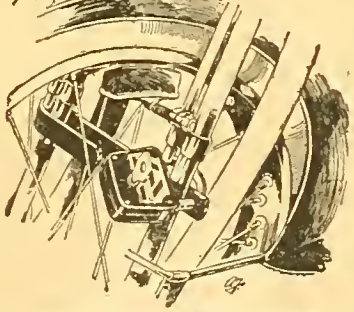
GET IT AT

THE BIG

100 PAGE TAYLOR CATALOGUE IS NOW READY



Get a copy at once—no motor cyclist can afford to be without it. It is the most comprehensive ever issued in connection with the motor cycling industry.

Everything from a COTTER PIN to a fully equipped COMBINATION or LIGHT CAR is illustrated, described, and priced at

LONDON'S LOWEST PRICES.

The Taylor Catalogue is an expensive one designed on the loose leaf principle, so we can't afford waste circulation. We are therefore making a nominal charge of 1/- per copy which amount will be allowed in full off the price of the first article purchased from us. A coupon value 1/- accompanies each catalogue.

THE TAYLOR THIEF-PROOF LOCK.

QUICKLY FIXED, SIMPLE, SECURE.

Consists of a piece of flat steel bent into the shape of a hook with a hole at the opposite end. The hook is passed round one member of the front forks, while the other end is secured to the opposite side by means of an ordinary padlock the hasp of which is slipped through the hole. In that position the motor cycle cannot be wheeled, and it would take an expert thief some time to cut through the steel bar with a hacksaw. Price 7/6; carriage 6d.

When ordering, state make of machine.

MAKE Your Own 2-stroke Lightweight.—Sets of castings and parts for 2-stroke engines, suitable for scooters, cycle attachments, or lightweight motor cycles. Castings in first-class quality cast iron, phosphor bronze, and aluminium, steel for shafts, all necessary nuts, bolts, and studs, together with blue prints giving all required dimensions. All these parts may be machined up to a small centre lathe, and are guaranteed to build up into a powerful and up-to-date engine. We guarantee all material, and will replace free of charge any faulty castings, etc.; price 57/6 (on rails Manchester). Cash with order. Prompt delivery. W. H. Taylor and Co., Ltd., Motor Engineers, Bury New Rd., Prestwich, nr. Manchester. [0633

IGNITION APPLIANCES.

MAGNETOS 60% Below Original Cost.

C.A.V., suitable for any 2 or 1-cyl. engine of less than 5h.p., height 4¼in., breadth 2⅝in., depth from armature driving end to contact breaker cover, 4½in. They are most efficient, and yet have the advantage of being the smallest magneto that can be thoroughly relied upon for the purpose recommended. Variable ignition and short circuiting terminal. These magnetos have platinum points, and the workmanship is of the finest. 2-cyl. fires at 180°; provisional price 47/6. All working parts are standard and interchangeable with C.A.V. Types K.U. 1 and 2.

THOMSON-BENNETT 8-cyl. Magneto, adapted for 4-cyl., variable ignition, clock or anti-clock, £6/6. —Below.

THOMSON-BENNETT and M-L.'s of Coventry, 1-cyl. A.D.S. or P.L.R. Types, clock or anti-clock, 35/-; variable ignition, 10/- extra; A.D.S. are particularly suitable for stationary engines.—Below.

THOMSON-BENNETT A.M.2, firing at 180°, variable ignition, and short circuiting terminal, clock or anti-clock, 50/-; Thomson-Bennett Type A.M.1, as above, but for single-cyl. engines, 50/-.—Below.

ALL Our Single-cylinders are guaranteed one spark per revolution. N.B.—State whether 1 or 2-cyl., clock or anti-clock, when looking at the driving end. Special net price will be made for contract orders to deliver so many per week or month; carriage and packing 1/9 per magneto; trade discounts on application.

GUARANTEE.—These magnetos were manufactured in anticipation of Government contracts, and have been a long time in stock; it is therefore necessary to throw out any damaged by rough handling, and to remagnetise and thoroughly overhaul all others. We guarantee that the work has been thoroughly done by experienced mechanics, and that all magnetos are despatched in perfect working order, and we claim that this justifies us in charging more than some competitors, who do not sell under the same description and guarantee.—Vale Engineering Synd., 8-11, Brown's Bldgs., St. Mary Axe, E.C.3. [0590

P. and M. Magnetos, new, with sprocket and chain; £2/10.—Below.

T.B. Magnetos for any machine; £2/10.—24, Church Walk, Hampstead. [3484

MAGNETO Specialists.—B.L.A. Engineering Co., Hinckley, Leics. [X3223

CONTINENTAL Ignition Repair Co.—We repair Continental magnetos only. By specialising on Bosch, U.H., Eisemann, Mea, Splitdorf, Dixie, and Berlin magnetos, we can naturally give you better service.

PRICE: Rewinding 18/-, condensers 10/-, platinum screws (Bosch standard) 6/-, remagnetising 2/6, slip rings 6/6, H.T. terminals 4/6. Our price for overhauling a motor cycle magneto ranges between 20/- and 35/-, and never exceeds the latter figure. Guaranteed for 12 months, and redespatched to you in 2 days.

CONTINENTAL Ignition Repair Co., 13, Hardwick Rd., Chiswick, London. [117

MAGNETO Repairs.—Send your magneto to Palmer Garage, Tooting. Reply paid, quotation telegraphed on receipt; quick, efficient repair guaranteed in from 2 to 6 days, usually within 24 hours.—Palmer Garage, Tooting. [327

BOSCH Magneto Repairs.—We undertake every kind of repair to Bosch magnetos, and specialise on this make. All repairs guaranteed, Rapid service. Expert workmanship.—Langford's, 37, Cricklewood Broadway, London, N.W.2. [297

COVENTRY Ignition Supply. — Thomson-Bennett magnetos, waterproof, variable ignition, single and twins, any degree, suitable for any class of motor cycle or stationary engine, £2/15 each, 1/6 postage; trade and export enquiries carefully attended to.—Below.

C.A.V. Magnetos, the specially constructed magneto suitable for any lightweight, ideal in every way, £2/15 each, 1/6 postage.—Below.

PLUGS.—New supply of K.L.G. and Lodge, 2/6 each; trade enquiries solicited. — Coventry Ignition Supply, 97, Gorton Rd., Coventry. [237

THOMSON-BENNETT Magnetos, single £2/10, twin any degree £2/15; postage 1/6; contact breaker guaranteed platinum points, 9/6; spares for all types of magnetos. All our goods are sent out with a written guarantee.—Wiltshire, 9 Arlesford Rd., Clapham Rd., S.W.9. [322

Manxland the Cynosure.

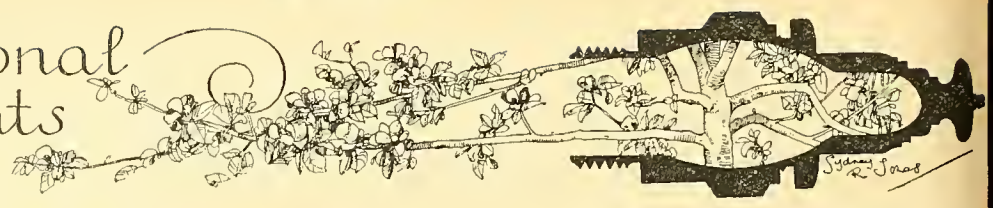
ALL eyes are this week focussed upon the Isle of Man. To the motor cyclist the thirty-seven mile mountain course is what Indianapolis and Le Mans are to the automobile world, and Epsom Downs is to those who follow horse racing, for there is decided annually the blue riband event of the motor cycle world. By the time these lines appear in print, the Junior contest will have been lost and won, and the results flashed by *The Motor Cycle* throughout the world. To-day (Thursday) the greatest race of the year—for the Senior Tourist Trophy, presented by the Marquis de Mouzilly St. Mars—will be contested by over sixty expert motor cyclists.

Reports from the course, reviewed elsewhere in this issue, indicate that to-day's event should represent the greatest race of the whole of the series inaugurated as long ago as 1907. Thousands have journeyed over to the Island to witness the races, and more would have done so had improved travelling facilities existed. Although not of the international character British motor cyclists would wish to see, there are sufficient international interests involved to draw the attention of the next greatest motor cycling nation to Great Britain, for America will be represented by men and machines.

The race is more than a test for man and machine: designers' reputations are at stake, and the results may have great influence upon future engine practice—a point affecting all classes of buyers of motor cycles. Overhead valved power units are competing with those of the more conventional side-by-side valved types; single cylinders, opposed twins, and V twins vie with one another to prove their superiority.

It is disappointing that Continental nations are not represented, since manufacturers of France, Belgium, Italy, and Switzerland have all made rapid progress in later years. An opportunity for some measure of comparison of the abilities of riders and machines will, however, present itself at the Grand Prix Race next month.

Speed and the Tourist Trophy.



IN speculating on the probable winner of the Tourist Trophy Races many enthusiasts fall into the error of expecting the fastest machine to win. It is true, of course, that the fastest machine stands a good chance, but it is also true that probably 75% of the entrants are mounted on machines that are fast enough to win. What, then, are the vital features of a winning machine? Briefly, they may be summarised as acceleration, ease of control, efficient braking, reliability, and last of all speed. The whole value of the races to the buying public lies in these points, and it is for this reason that the Tourist Trophy Races do more to improve the modern motor cycle than any event in the year.

Brooklands does much to improve the power and stamina of engines; reliability trials demonstrate the general road worthiness of motor cycles, though not infrequently they are won by the accuracy of a watch or the ability of the rider to ride to strict schedule. Hill-climbs and speed trials provide interest and excitement for the sporting element, but the Tourist Trophy Races combine the best qualities of all these events, while they eliminate all extraneous factors except the personal element, which can never be a negligible quantity in any form of test. The ultra efficient racing type of machine, however, such as those used for short speed bursts on the track, does not find a place in the races, for the nature of the course sets a great premium upon general rideable qualities.

The Isle of Man course serves its purpose admirably, for the corners are such as to place a premium on acceleration, stability, and brake work; the mountain climb, though not steep, is long enough to test the power and endurance of the engine; while the few straight stretches help pure speed in just the right proportion. Let those who doubt the utility of the T.T. attempt to tour the Island course at high average speed, and they will soon discover the drawbacks of a faulty or imperfect mount.

An index to the advertisements in this issue will be found on the page facing the back cover.

Occasional Comments by "Ixion"

The Lucas Spare Bulb Case.

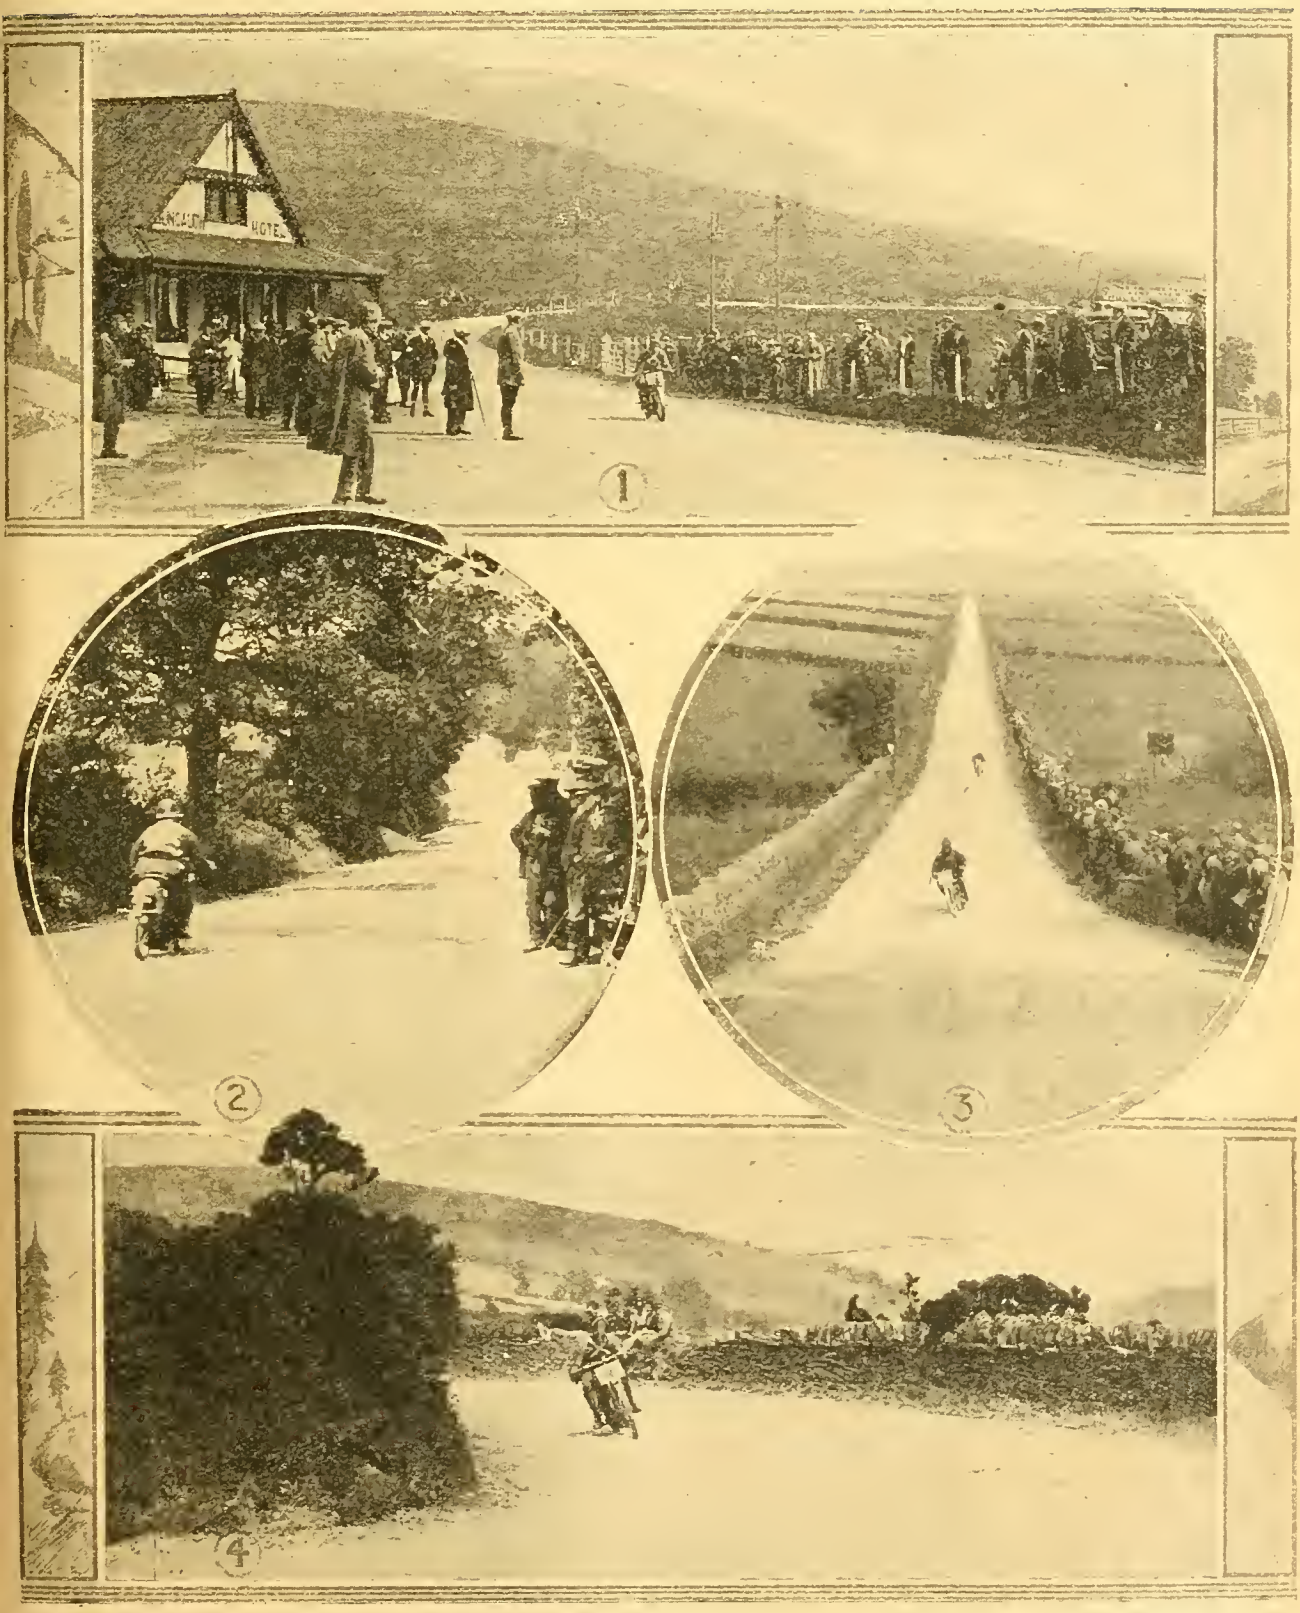
I HAVE just received a sample of the Lucas spare bulb case. Complete with three small bulbs and one large one, it weighs a fraction over 10 oz. It is a cylindrical canister with spring bayonet-jointed caps, and measures 5½in. long by 3in. diameter. Made of light sheet steel, it is so strong that you can play football with it without risk of smashing the contents, and is admirably adapted for the boot of a sidecar. On a solo mount it will be something of an incubus, unless you fake up a clip to secure it to the saddle-pillar tube, for which purpose, doubtless, its waist is slightly recessed. It sounds rather big, but you cannot accommodate a full kit of bulbs in less space.

Average Speeds.

A GREAT deal of nonsense is spoken and written about average speeds, both as regards actual achievement, and the theory of the thing. On the one hand, "Eclipsed" thinks that a 30 m.p.h. average is only possible if it includes spurts of nearly 70 m.p.h. To which Mr. Hartley wisely retorts that if George Dance averages 55 m.p.h. for a T.T. lap, what is his maximum in a spurt? Curiously enough, this very point was raised during the same week in our contemporary, *The Autocar*. One of its contributors crossed France in a Saurer motor char-à-banc, which was limited by a governor to a maximum speed of 22 m.p.h. (except when coasting declutched down hill). On one day's run this 5 tonner actually averaged within 5 m.p.h. of its all-out speed, viz., 17 m.p.h. Excluding blunt lies and sheer exaggeration, most of the discrepancies about high average speeds, and the conditions which make them possible, depend upon the driver's notion of what constitutes a safe speed through traffic and populous places, and round corners.

An Illustration.

ANY motor cyclist who is compelled for his sins to start and finish all his runs along the Metropolitan tram routes knows the hypnotic effect which trams and motor 'buses exert on a rider. It becomes a matter of life and death to overhaul each cumbrous monster, as it is sighted. The cause probably is due to a sub-conscious dislike of finding one's self cheek by jowl with a leviathan when a traffic cram develops. Anyhow, like most men, I usually accelerate and pass them as soon as possible. The nett effect is that I have often discovered myself averaging over legal limit from, say, Swiss Cottage to Tooting. On the other hand, when I am not disturbed by trams, I am the soul of caution in traffic, and drop to 5 or 10 m.p.h. Other riders, by contrast, quite frequently negotiate quite heavy traffic at a speed which appals me. On a long cross-country run one often threads townships which are two miles across. It makes all the difference whether one slows to 10 m.p.h. or penetrates them masterfully with a lot of hooting at 25. In the former case, some lurid scrapping on the open road is necessary to maintain a high average; in the latter case a little comparatively mild speed will set up high figures. The Saurer char-à-banc could average almost its maximum speed just because its maximum was almost maintainable in towns. There are parts of Scotland where villages are scarce and their streets are wide; it is easier to average forty there than it is to average thirty in England.



The Aerothrust.

A SOUTH African reader sends me a most interesting account of the engine which he uses on his boat. It is known as the "Aerothrust," and hails from La Porte, Indiana. This flat twin two-stroke has its cylinders and crank case cast in one piece, and utilises a flywheel magneto, possessing advance and retard mechanism. My correspondent has used it for two years, and has coaxed the r.p.m. up to 2,000 by filing the valve ports dead smooth. He starts it up on petrol, and switches over to a mixture composed of one-third petrol and two-thirds paraffin when the engine gets warm. I should like to know more about this unusual unit. The makers claim that the 5 h.p. pattern, 75 mm. × 88 mm., will pull three boats each containing four passengers by means of a 3ft. 6in. airscrew; and the illustration shows that the entire outfit is attached to the stern of the dinghy by a small clamp such as cooks employ for affixing mincing machines to the kitchen table.

The Revolution Limit?

WHAT is the maximum speed at which a petrol engine can be run? Time was when one looked a trifle conscious if the figure of 2,000 r.p.m. was mentioned, and experts sniffed audibly at the idea. Slowly the limit rose. Three thousand became as common as blackberries in September. Four thousand was credited to a super-tuner here and there—Coatalen, O'Donovan, and the like. Not so long ago we thought a claim of 6,000 r.p.m. worth public mention in *The Motor Cycle*. The other day the representative of a certain firm coolly, calmly, and dispassionately—at a time of day when sobriety may be taken for granted—on an occasion when there was no question of capping yarns against a trade rival—claimed *nine thousand revolutions a minute for one of his engines!* Aye, and when tackled with Lanchester's conclusions about the theoretic limits of piston speed, he guaranteed that on one of its track records this engine had been geared to a figure suggestive of the second speed in a tourist gear box, and left us to work out the resulting r.p.m. At any rate, I can assert that when this particular engine gets thoroughly on the bummel, no human ear can detect any periodicity in the sound of the explosions; the exhaust is simply one large rip—something like tearing emery paper.

VARIED SCENES ON THE T.T. COURSE.

Those who have not visited the Isle of Man do not always appreciate that the races take place amidst widely diversified surroundings. 1.—The bleak and isolated "Bungalow" on the mountain road. 2.—In the shady, leafy lanes of Glen Helen. 3.—Undulating pastoral country at Hilberry. 4.—A glimpse of the sea and Ramsey pier from the Gooseneck on Snaefell mountain.

An Irresponsible Discourse on the Choice of a Holiday Centre for the Motor Cyclist

WHEN the Editor commissioned an article on holiday touring grounds, the writer was selected because a hard season of competition following has taken his wheels into almost every corner of England or, as Fougasse's meticulous Scot corrected the Hun's "Gott strafe ———," Great Britain.

Now a man who uses his motor cycle continually, and travels at an hour's notice to the Lakes, to Wales, the Yorkshire Dales, or to Devonshire on the trail of trials is the last man to choose the motor cyclists' touring ground. He is *blasé*. Windermere is not a radiant lake, an island-studded gem—it is a lot of water round which one has to go to reach Red Bank, for an acceleration test. Somerset and Devon are not England's garden, "where the zider apples grow" — they are places always seen in the bleak grey morning of London-Exeter or Land's End trials; they are famous for Porlock and Lynton.

In the English Lake District. Grasmere seen from the summit of Red Bank.

The ordinary individual may rave of the luxuriant fruit-growing areas of Worcester, or the moorlands, meadows, and mountain streams of the West Yorkshire Pennine slopes; to the writer, those charms of Worcestershire are merely the setting for the worst straightforward climb in the country — the Old Wyche — while the beauties of the Yorkshire dales are merely concomitants of Park Rash, Buttertubs, and the routes of the Ilkley Club's trials.

Scotland may have its lochs and bens; but we go over the Border chiefly to climb Amulree, or to spend a bright evening with the boys of the Edinburgh Club in the shade of the Castle.

Of what then must the writer tell?

With the weather as it is at the moment of writing (thanks to the sun-spots), the best use of the motor cycle is to mount with as little preparation as possible, and get to the nearest calm water quickly and laze away the days in canoe or punt; what

Whither Away?—

could be better than a drowsy restful week on the quiet backwaters of the Upper Thames, the Severn, or the Avon?

Scotland and Central Wales have their scenic beauties in unlimited extent, but they are lonely and appreciated most by the thoughtfully inclined nature lover. The topography of Lakeland is less austere than that of Scotland, and some of the lake-side townlets have the effect of rather dignified little sea-side resorts.

Mountains—and the Sea.

The Welsh coast provides mountains in proximity to the sea, and a combination holiday, alternating grave and gay days, solitude of mountain tops and life at the coast, may be had.

East Coast places boast their bracing atmosphere, but the flatness of the approach does not attract the motor cyclist, who is usually a voracious hill-eater; this, however, does not apply to the North-east Coast, which has a rugged profile and tumbles down precipitously from the undulating plateau of the Wolds.

Fine coast scenery is, of course, a feature of our country, and probably nowhere in the world is there so great a diversity of characteristics as we can explore within such comparatively small distances; who, feeling alone with primal nature on the wild lochs of Ross-shire, could imagine that only a few days road-faring southwards would bring him to those suburbs by the sea on the Kentish and Sussex coasts?

In the track of motor cycle trials, the writer has found beauty spots in pastoral Warwickshire and rugged Derbyshire, desirable places untold in Devon, Somerset, Gloucester, and Worcester, mountain haunts with England at its ruggedest in Yorkshire, in Cumberland, North Lancashire, and Westmorland. Wales and Scotland have characteristics all their own, and some of the most beautiful districts imaginable are to be found tucked away in all sorts of odd corners in those countries.

These pictures show types of scenery in strong contrast to the other illustrations to this article. The rugged sky lines of the North are nowhere evident in the more luxuriant Midlands and the South.

(1) On the Avon at Stratford.

(2) Leafy lanes, orchards, and trim pastures abound in the western midland counties of Worcester, Gloucester, and Hereford.

(3) Quaintness, as much of man-made things as of natural beauties, is the feature of the Devon and Cornish coasts. Brixham, here shown, is typical.

Whither Away?—

How is it possible to recommend any one spot in the wealth of the glorious country in which we live; so full of beauty spots is it that even the very outskirts of our manufacturing towns and especially the edges of our coalfields (it is unfashionable to say coal *mining* areas!) would provide profitable holiday touring ground for those who delight in hunting quaint and little known beauty spots.

Human nature, however, being what it is, demands change, and sees little in the familiar; the Londoner goes to the Lakes or Scotland and travels 300 or 400 miles to his destination; the man bred on the Cumberland Fells is amazed at people who travel so far to see just a lot of "'ills an' watter," and goes to Blackpool, while the Scot leaves his hills and spends a week with relations at "St. Andra's."

Such is life! WHARFEDALE.

A typical Highland scene. At the southern extremity of Loch Ness, on the Caledonian Canal.

CHAIN ADJUSTMENT AND ITS EFFECT.

Correct Tension is Almost as Important as Proper Lubrication.

THERE is no doubt that a great many riders do not realise how very necessary it is to keep the transmission of a chain-driven machine not only in good order as regards lubrication, but also at the proper tension. Incorrectly adjusted chains not only have an effect upon the good pulling of an engine and its sweetness of torque, but also upon its life. As an example, I recently received a machine back from the makers after a complete overhaul. They had fitted new chains, but the tester had not troubled to adjust them properly. Mounting the machine I naturally knew at once what was wrong, but thought it hardly worth while going to the trouble of making the adjustment in the midst of London traffic.

The sensation was so disconcerting, that once amidst quiet country lanes I decided to remove the chain case and make the necessary adjustment, whereupon I discovered that, whereas the countershaft chain could not be tightened any more, yet it would not stand the removal of a half link! There was nothing for it, therefore, but to wait till the chain stretched.

The ride home was not a pleasure. The engine snatched badly at low speeds, and consequently possessed not an atom of "get away." I vowed that I would sue the makers for a new engine, as they had ruined the old one. At high speeds a hideous grinding and jangling came from beneath me. The old machine, however, seemed on the whole to be having an even worse time of it than I was.

Next day I spent countless perspiring and troubled hours wangling things so that the chains were at the correct and desirable tension, and this done, again sallied forth. The engine responded with the kick of a mule, and it was almost impossible to realise that I was riding the same machine, as the good effects of the overhaul now became evident. Moreover, the m.p.h. and m.p.g. were both increased.

It is possible, however, to go to the other extreme, for younger cousins and elder uncles continuously ride with their chains slapping against the chain cases, oblivious of the fact that anything matters till the chain jumps the sprockets and dents a hole in something, when they sit down and breathe oaths against their manufacturers. The more one studies motor cyclists as a mass, the more does one marvel at the absolute lack of "refined engineering taste" on the part of those who do *not* read *The Motor Cycle*.

Chains should be just so slack that they are not tight, no tighter or slacker, and it is a very good tip, in the case of totally enclosed chains, to empty a 2 lb. tin of axle grease into each of the chain cases. They then run beautifully silently, and will keep perfectly lubricated for several months. CHINOOK.

Through Feminine Goggles

Some Disconnected Jottings reflecting the Opinions of Lady Motor Cyclists.

Edited by "MINNEHAHA."

WHEN Miss Peggy Fraser—the fashion artist—wrote her contribution on motor cycle attire for ladies which appeared in *The Motor Cycle* for March 17th, she little realised the amount of correspondence she was inviting from other ladies who ride. She writes that she has found it impossible to deal with all the letters she has received, and at the request of many lady readers she has made arrangements for *The Motor Cycle* costume she designed to be made to measure by "Bisleys," Grove Arcade, Wallasey, Ches. Incidentally, the principal of this house is herself a motor cyclist.

Miss Fraser now submits a drawing of a suède or chamois leather jumper to take the place of the leather waistcoat, for summer wear. She draws attention to the fact that the neck can be closed up with thong and tassels. She recommends chamois as being the most suitable material, as it washes so easily.

A jumper in suede or chamois, designed for summer wear by Miss Fraser, to replace the leather waistcoat.

To Save the Complexion.

Quite on another subject, but one deemed just as important, Miss Fraser writes on the effects of motor cycling upon the complexion.

"I have known girls take up motor cycling," she states, "only to drop it again when they realise that the strong wind and exposure to the sun is spoiling their skin. Of course, I know enthusiasts will insist that they were not very keen to start with, if a little thing like that will put them off, but that is not so, and after all the 'little thing' assumes tremendous proportions when one gets into an evening dress again. The annoying part of it to the real motor cycle enthusiasts is that, with proper care, there is no need for any disastrous results. Of course, if one pays no attention for months it would not be an easy matter to convince onlookers that the complexion is quite in the picture with a petal frock of tulle. A smooth brown face may be very charming, but the same cannot be said of the neglected skin that burns red, and, sad though it is, these are in the majority.

"There are one or two hard and fast rules that are agreed by those who have discussed the matter with me. To begin with it is not wise to wash the face in hot water just before setting out, and never at all before departing for the homeward journey.

"A pot of good greasy cream—a pot of vanishing cream and a box of adherent powder always accompany me on my trips. Talcum powder is no good at all for this. Before setting out a very little greasy cream should be rubbed into the skin, particularly under the eyes, then a very little vanishing cream or pure glycerine, and a fairly thick dusting of powder, more than would be used in the ordinary way. The greasy cream will clean up the skin while one is out better than washing with soap and water, which usually has an irritating effect when the face has been exposed to the sun and wind. The greasy cream prevents the wind drying and roughening the skin, the vanishing cream prevents the dust from invading the pores, and forms a substratum on which a deft touch of powder will restore the freshness of the complexion."

Through Feminine Goggles.—

This hint will be of value to sidecar passengers also, as apparently they expose themselves to the same dangers to their complexions.

A Grumble.

I have before me a letter from a Louth gentleman who raises a point which may have been overlooked by lady motor cyclists. He writes:

"As every motorist knows, lady motor cyclists are increasing in numbers all over the country.

"It has been my experience, and I have no doubt that of others, frequently to have the pleasure of helping these ladies when in difficulties. Any sporting motor cyclist passing a fellow rider in difficulties slows down with the customary enquiry of 'Are you all right?' From my experience girls never do this.

"The other afternoon while out with a lady pillion passenger I had a breakdown and, feeling unwell, would have been glad to have my 'Get you home vonchers' taken a distance of two miles to a neighbouring town. Several girl riders and lady car drivers passed me without so much as a glance. After a somewhat tiring push in which my passenger nobly assisted, I had my machine repaired at a garage. Later, returning homeward, we came across the usual disconsolate female beside a two-stroke, who gave a very decided 'No!' to my enquiry. Her trouble proved to be a mysterious failure of the carburetter to flood, owing to shortage of petrol in the tank.

"My point is this: Girls have taken up our sport, even imitated our attire. They are very much offended and rightly, if deserted when in difficulties. Why not be thorough motor cyclists and show a little courtesy on the road sometimes?"

Miss Mary C. Coxeter, of the Morrell Memorial Hospital, Wallingford-on-Thames, makes a plea for the lady's model motor cycle.

"I have been taking *The Motor Cycle* for some time," she writes, "and cannot understand why so little interest seems to be taken in designs, etc., for women riders. I know that young riders prefer a man's machine, but there must be many like myself 'no longer young,' and holding a position of matron, or some other like appointment, who simply cannot ride a machine with a diamond frame, and certainly not in the attire that the younger riders can and do wear. I wish Miss Fraser could supply one with a pattern."

Miss Coxeter seems to have overlooked the many excellent ladies' machines now available. Among these I can mention off-hand the Velocette, Ixion, Cedos, and Excelsior. There are several other machines suitable for ladies who wish to ride without having to don special clothing. The Reynolds runabout, for example, is like a little car on two wheels, and is as easy to handle and wheel about as any motor cycle of the conventional type. This machine is a glorified scooter, but has a full-size engine, two-speed gear, clutch, and pedal starter. The frame is entirely open, and all the machinery is tucked away inside—a compartment very like the bonnet of a car.

1921 summer fashions for lady motor cyclists—a snap taken at Bala this month of a Norton enthusiast who has elected to discard the skirt

Then there are the Autoglider—a full-powered machine of the scooter type—and the Kenilworth: both machines favoured by many ladies who require weatherproof mounts for shopping and social calls.

A lady in Bridgwater favours the sidecar—an 8 h.p. one, to boot—and although it appears to be an admirable mount in almost every way, there are points she criticises.

"It starts with the minimum of trouble," she writes, "runs quietly and smoothly, and has always plenty of power in hand. I go through seas of mud with hardly a spot on my boots, owing to the excellent mudshields, while my passenger sits in the acme of comfort, with hood, side curtains and screen to meet the weather. There are one or two points, however, I do not like.

"For instance, there is the question of the front brake. It rubs on the front wheel rim, is very inadequate, makes a ghastly groan when used, removes the paint, and leaves a sullen red line.

"Then the sidecar is placed a trifle too close to the cycle. Being unusually tall and muscular I can lift my leg with a swing over the seat and down without knocking the sidecar, but an extra inch and a half would make a great deal of difference, and would allow a passenger on the carrier to sit naturally.

"The luggage carrier is curved to fold over the back of the car when not in use. But this curve has the kindly property of pitching luggage against the paint, and it is with great difficulty that a suit case can be prevented from rubbing unsightly patches on the excellent coachwork.

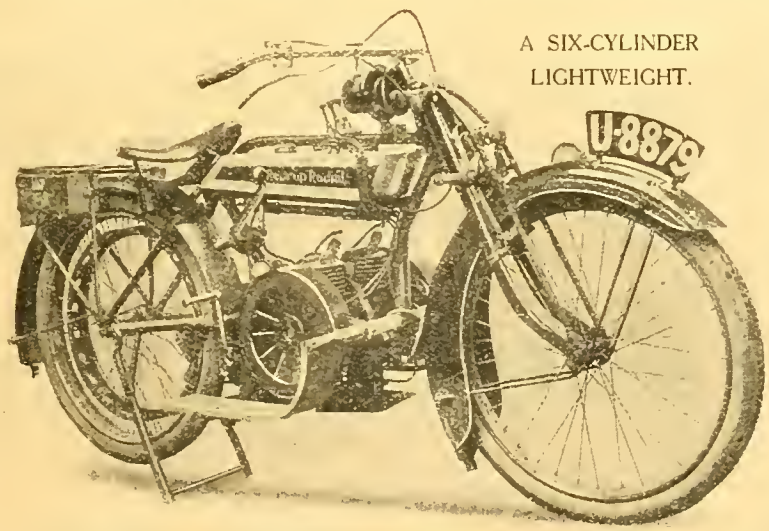
"A proper inspection panel to the chain cases is indispensable, and, incidentally, the accessibility of some parts might be improved."

FRENCH FASHIONS FOR LADY MOTOR CYCLISTS.

(Seen at the Parc des Princes Track at Paris.)

Mme. Girardot, who won the sidecar competition for ladies at a recent Parisian event. (Inset Mme. Gaillard, who rode a Blériot in the same trial.

Multi-cylinder Motor Cycle Engines



How Many Cylinders may bring High-powered "Lightweights" into Being.

MOTOR cycles gradually increased their weight before the war because the demand for more power was answered by increases of cylinder capacity without departure from existing designs.

In the case of single or twin-cylinder engines having irregular or widely-spaced torque intervals, increases of size resulted in much more highly stressed transmissions and disproportionately increased weights of power units themselves.

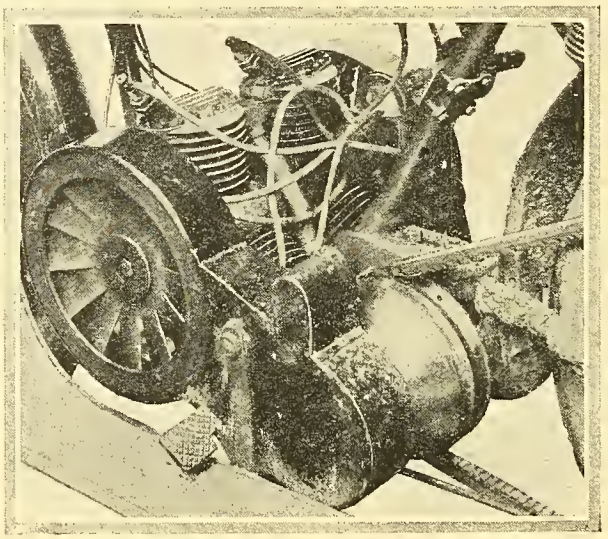
Aircraft engineers promptly learned that increase of power (capacity) without disproportionate increase of weight could only be achieved by increasing the numbers of the cylinders, or, alternatively, reduction in weight of an engine of given capacity could best be effected by multiplying its cylinders. Thus five-cylinder engines gave place to sevens, nines, twelves, twenty-ones, and even greater numbers.

Motor cycle engineers, on the other hand, have not pursued the multi-cylinder ideal to any extent, yet an increased number of small cylinders to give a required total cylinder capacity will permit reductions in weight on many accounts; for example, the greater the number of cylinders the less need for heavy flywheels, owing to the more continuous delivery of comparatively small separate power impulses. In the same way transmission weight can be cut down by the employment of light chains or gears; it is not often realised, for instance, that the ultimate breaking load of a $\frac{1}{2}$in. × $\frac{3}{16}$in. chain is only about 30 lb. less than that of a $\frac{5}{8}$in. × $\frac{3}{8}$in. chain. The large bearing areas of the latter size of chain are needed to resist the crushing effect of the large impulses of one or two-cylinder engines in use to-day, but the smaller chain would successfully overcome the tractive resistance if the power unit delivered the even torque of an electric motor.

A SIX-CYLINDER LIGHTWEIGHT.

A 5-6 h.p. Redrup Radial; each cylinder has a capacity of 103 c.c., and the six tiny impulses in two engine revolutions permit light transmission details to transmit the even but powerful torque.

Sporadic Efforts.



Generally speaking, the motor cycle trade has eschewed the many-cylindered type of engine, but the F.N. four-cylinder, and such even-firing units as the Douglas, Brough, Scott, and A.B.C. have all shown good results for their weight. The four-cylinder, however, involves an expensive crankshaft, and the same may be said of such

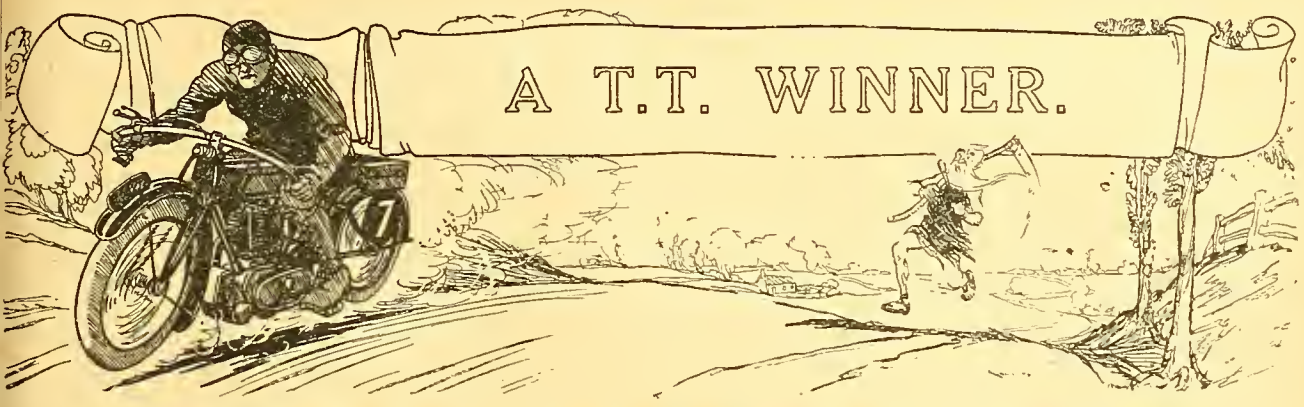
Multi-cylinder Motor Cycle Engines.—

past efforts as the Dennell-Jap of 1905 (three cylinders in line), and the eight-cylinder American Curtiss of 1908.

Undoubtedly the layout permitting the greatest weight economy is the radial type, for almost any number up to nine cylinders may be conveniently disposed around a single crankshaft. Early motor cycle engines designed on the radial principle were rather few and far between, but the type is by no means a new innovation; Anzani brought out an even-firing three-cylinder before 1908, and round about the same time the Esnault-Pelterie five-cylinder "fan-type" engine was put into use for pacing machines.

The early days of aviation thrust the claims of the radial into high prominence, and a designer responsible for one of the pioneer static radials turned his attention after the war to the production of a miniature three-cylinder radial suitable for lightweight motor cycles. This engine is now incorporated in the British Radial machines, and the designer, Mr. C. B. Redrup, is now experimenting with six-cylinder engines. The one illustrated is a mechanical combination of two three-cylinder engines having a built-up crankshaft with two throws set at 360° (*i.e.*, both rise and fall together); a single carburetter serves all six cylinders, and the magneto is similar to that described on previous occasions in *The Motor Cycle*, having an H armature, with two cams in the contact-breaker set at 180°; the high-tension current is led to the sun wheel of an epicyclic distributer, whence it passes by way of two planets (which roll round at one-third its speed) to the segments on the internally toothed ring. As the magneto runs at one and a half times engine speed, there are six sparks delivered in each two engine revolutions. The oiling is somewhat different from that used on the earlier Redrup engines, for the tappet operated oil pumps are dispensed with and a quadruple pump is installed in the tank. Four leads extend to the four timing rings, and the surplus lubricant leaks along the oilways in the crankshaft, whence it is flung into the cylinders.

A mechanical combination of two three-cylinder engines forms the six-cylinder Redrup.



With a bore and stroke of 50.8 × 50.8 mm., the total capacity of the engine is 618 c.c., yet the weight is under 50 lb. The torque is so even that only a light-weight two-speed gear box is in use on the experimental machine, and the total weight is less than 200 lb.; thus it is possible to make up a 5-6 h.p. machine which is a "light-weight" for taxation purposes.

A short test which we had on the machine showed it to have high speed and acceleration with an extraordinary absence of torque vibration. Carburetter difficulties, however, are not entirely overcome, and in consequence the top gear hill-climbing was not comparable with the speed attained on the level; however, the charm of driving a machine propelled by such a continuous delivery of power impulses has to be experienced to be appreciated, and at a later date more precise results will be obtainable when further experiments have been carried out. Such engines naturally need development for motor cycle use; with shaft drive, for example, they should be ideal.

A NEW DEPARTURE FOR AN OLD CLUB.

The start of the recent Twenty-four-hour Trial to Torquay and back of the Coventry and Warwickshire M.C., when a very large crowd assembled, as also at the finish. Among the riders in the foreground are: L. Crisp (4½ Humber), R. Wright (4 Triumph), T. H. Meakin (4 Triumph), R. A. Player (4 Triumph), and F. A. Marshall (4½ Humber).

A T.T. WINNER.

A Study of the Man who Wins and the Fears that Beset him on the Course.

HE is (probably) rather a small man. He is certainly very dirty. As he stands astraddle his machine waiting for the start, he cannot be called pretty. A "crash" helmet hardly sets off manly beauty at the best. His heavy clothing has made him perspire a little during the official preliminaries. He is obviously rather nervous—his eyes flicker, his smile is a little forced, his laughing chatter betrays an inward flutter. The casual observer, devoid of trained sympathies, writes him down as, perhaps, rather an unusually clever mechanic, with athletic tendencies, strung up for the moment to deeds of daring by the hope of an enduring fame and a substantial reward in hard cash and promotion.

Let us try to do our imaginary winner rather better justice.

* * * * * *

Perhaps two or three months ago he knew an exciting moment when one of the leading firms approached him to ride for them, and offered him their "first string." That alone marks him out as above his fellows. There are nearly 200,000 motor cyclists in the kingdom, and this little man may be the pick of them all. (How many people are employed in your personal profession, gentle reader? Do you stand at the absolute summit of it?) For the last month or two he has "worked" in a sense which few people read into that much abused word. Road tests. Bench tests. Workshop tuning. More road tests. Consultation with the designer. Changes in engine, gears, 'bus. More tests. Then across to the Island. Daily practice in the chill morning mists before the world is up. Now, after a month of the most intense and concentrated labour, he is going to play dice with fortune for four interminable hours. Such duels are a familiar experience to many men. To the aeroplane pilot—but the air is wide and clear. To the soldier—but for him fate is largely a lottery, and he bears little personal responsibility. To the sailor—but he has only Nature to grapple with.

Thinking in Thousandths of Seconds.

The boy before us is going to tackle continuous perils, coming upon him in as quick succession as the lightning flashes at the centre of a tornado. He will have to think and act in thousandths of seconds, and one false move may spell failure. Moreover, he is matched against the massed brains and cunning and dash of at least two continents. It is not his motive only to survive. He is riding to win. Not the least of his many formidable opponents is *himself*.

The first threat to his mental balance comes from fear. The course looks wide enough in all conscience as you tour gently round it at thirty. At forty it is transformed into a succession of dangerous bends. At fifty the corners look as if nothing could steer round them, and progress becomes an appalling gamut of spurts, skids, and violent brakings. At fifty-five the road seems to shrink to an average width of 2ft. 6in., and the assorted materials which bound it look harder than ever. So the first temptation, which lasts perhaps a quarter of a lap for a really fit man, is to funk.

Intoxicated by Speed.

This soon passes, and the devil who tempts men brings a far more subtle influence out of his bag. He envelops you in the intoxication of speed. The roar of your engine; the consciousness of another man behind you; the occasional peep of a dust-cloud not too far ahead; the sense of skill and mastery which every skating swerve of speed cornerwork imparts; the contemptuous superiority which comes of overhauling slower men: all these things go to the head like wine. The rider becomes what an old Scottish mystic would term "fey." He sloughs off all idea of terror. He becomes drunk with speed. His strained expression changes to a look of positive pleasure. He grows more and more daring. If he does not resist this madness of velocity he will presently crash. If he is in the first rank, he will pull himself together, cool down the crazy emotions which bid him take unpardonable risks, and begin to ride a grim, cool, deliberate race in which peril is balanced against prudence so exactly that maximum speed results.

Possibly a spice of trouble with some detail of his machine will steady him. He stops. For a moment he is drenched in a fever of apprehension. All seems to be lost. With trembling fingers he picks aimlessly and senselessly at the machine. Then reason reasserts itself. He forces himself to work as if he were in the shops at home with all the day before him. In a minute or two he is off again, and this time he is riding in deadly fashion—never dropping a yard, and never courting a crash.

A T.T. Winner.

By the half distance the most emotional man is sober enough, and sheer physical weariness begins to enforce the next relentless test. His machine is rigid. The road is rigid. His body is soft, impressionable and flexible. For over 100 miles his body has sustained the incessant shocks of the continuous impact, his wrists have pinned the skidding, bouncing wheels to the desired track, and all the time he is crouched in a posture which no other animal ever assumes for more than a few moments. Every muscle aches, every sinew is weary, every nerve is raw. Nothing but superb concentration can conquer this extreme physical exhaustion. If he thinks of it, presently only a fraction of his wits will be available in some cruel emergency. Speed and steering are his sole legitimate occupations; he must serve them to-day, and leave minor matters for to-morrow

The Last Lap.

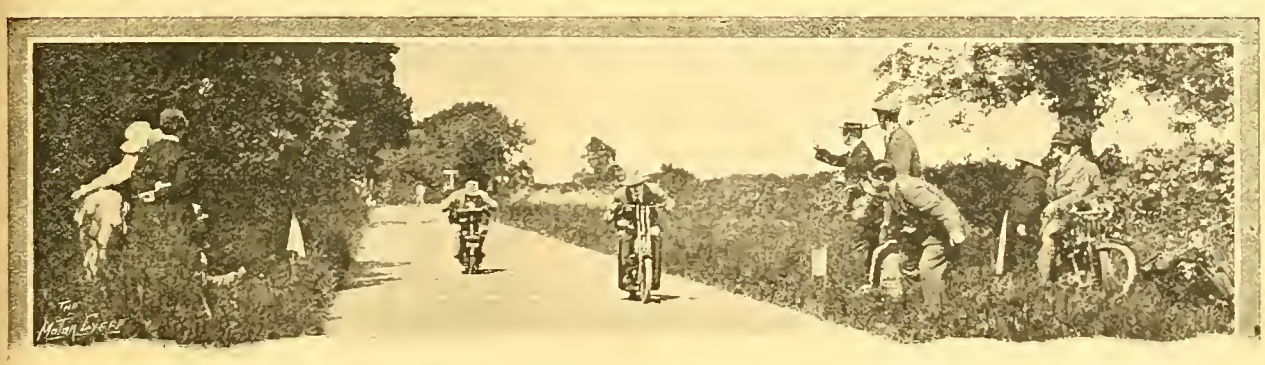
In the concluding laps comes the most searching ordeal of all. Stamina is all but exhausted. Only an iron will can keep the worn body true to its cruel task. Meanwhile the rider has some notion of where he stands. In the constant passing he acquires some notion of who are still in the running, and how they are travelling. Friends signal as he passes. At his replenishment stop he gathers vague and disturbing knowledge from the flurried encouragement of his colleagues at the depot. He has one man to help him swill in fuel and oil against the fleeting seconds, and, as he rinses his mouth, his friend gasps anxiously, "You're a sure winner, old man, but for heaven's sake don't spare her!" In 1913 the start of the last lap saw the three first men riding within *thirty-two seconds* of each other. The demeanour of the crowd at all the vantage points becomes eloquent. On the early laps they were almost languid when he passed. Gradually he felt he was being watched with interest. Now his appearance seems to have something electric and thrilling about it. Then, too, what were those blurred figures he glimpsed as he roared past the great hoarding where the score is kept? To be second in the race is to be nobody. He stresses himself to wrench extra fractions of a second from old Father Time at every corner. And he is *so* tired. The devils return, and beset him. The devil of the intoxication of speed (if the rider be young). The devil of fear (if the rider be oldish). And of all the laps the last lap is the worst! If he does not know he is leading, he knows he is near the front. Better die than lose by a matter of seconds. Better finish second than die. Every corner traps him in two minds. The watchers along the course are surely egging on the men behind him. He is tempted to beat record when he is almost too tired to sit the saddle for another forty minutes. He fancies that his engine is losing tune. Surely it is crawling up the mountain compared to what it did in that first lap which now seems centuries ago. Well, then he must save time on the corners. Never mind, it *is* the last lap. Just forty minutes more, and then he can lie down and drink and sleep and forget and rejoice. Then comes the last mile. The corners at Governor's Bridge seem deliberately intended to thwart victory, the wide road seems to have dwindled to a garden path. A blurr in the distance indicates that the grandstand is still there; in less than half a minute it has bounded past, people are cheering, the throttle is closed. . . .

* * * * * *

To think that this very superb, capable, and intelligent creature is probably descended from rather a feeble cousin of the gorilla. That his ancestors were content for uncountable centuries to subsist on roots and berries, and to dwell in caves or tree-tops. That they knew nothing of machinery, and were so devoid of imagination that they spent aeons in inventing the flint axe and the bone needle. That they scuttled chattering to their lairs when the lightning flashed or a tiger growled in the forest.

* * * * * *

The cosmic process is surely marvellous, and leads—whither?



WHERE RIDING SKILL IS NEEDED.

Approaching one of the most dangerous corners on the course. Immediately beyond Sulby Bridge the road turns abruptly to the left.

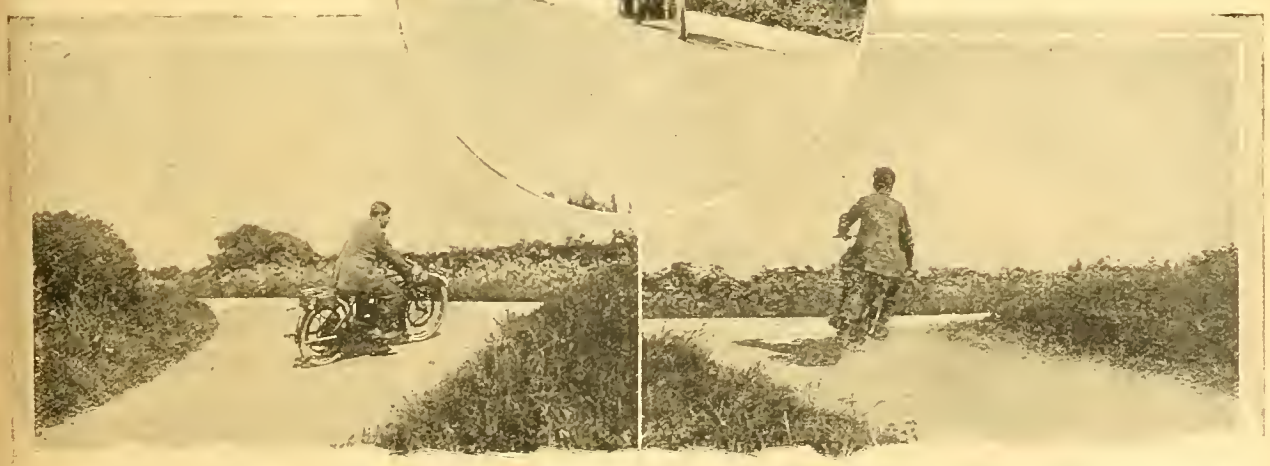
18 HAIRPIN BENDS IN A QUARTER MILE.

How far will a Motor Cycle Travel with the Petrol Tap turned off? Which is the Faster on Acute Bends—Solo or Sidecar?

The Kenilworth miniature about to cross the tape in the scooter acceleration test. The Autoglider, a few yards behind and rapidly gaining, was handicapped 20 yards in a distance of 120 yards.

HOW many can answer correctly the two questions given in our sub-title? They have been the subject of more than one friendly debate, so it was agreed to decide the points on the occasion of *The Motor Cycle* staff trial. This annual event was first inaugurated in order to settle such questions, when those who throughout the year have to follow the fortunes of competition riders of distinctly varying skill, covering more miles without any intrinsic award as an inducement, arrange a trial for themselves. Editors, sub-editors, artists, and photographers are there. Motoring colleagues from sister journals are invited to observe the tests, lady friends grace the occasion with their presence, and, for one evening at any rate, the caretaker of the office has a clear and satisfactory run, for no "overtime" gentry are in the way! Eight events were down for decision this month, the "regulations" a model of brevity—less than 100 words in all!

Those present were mounted on a varied assortment of machines—miniatures, lightweights, and mediumweight solo machines, T.T. mounts, and single and twin sidecar outfits; and from London and Coventry the editorial, artistic, and photographic staffs met on Edge Hill, Warwickshire.



Two or three who took part learned of the first post-war *Motor Cycle* trial as readers, but have since become regular members of the staff. A great point about the event is that "any machine is everybody's machine"—thus the various makes represented were sampled in turn by practically all the riders present, enabling a first hand comparison of their merits, and particularly the ease of manipulation.

Scooters Considerably Improved.

In the first staff trial of 1919, the scooters, let it be whispered, were taken over on a car, but two years have worked wonders. Scooters have developed (as we said they would) into miniature motor cycles, equipped with comfortable seats, and have so extended their range of utility that they were driven to the event under their own power.

A newcomer this year was the Reynolds Runabout, ridden to the venue (including a non-stop ascent of Edge Hill) by a lady. This machine attracted considerable attention at the last Olympia Show, and more will be heard of it since it is now in production—the open frame design is becoming popular with a certain class of

A miniature T.T., in which controllability and steadiness counted more than maximum speed. Unconcernedly smoking a cigarette, the rider of the Kenilworth, in the top picture, recorded an only slightly slower time than did the spectacularly skidding Sports Sunbeam and the chain-driven Triumph. Actually the Triumph rider made the best time of the three.

18 Hairpin Bends in a Quarter Mile.—

buyer not usually interested in the more orthodox type of machine.

In spite of the fact that the so-called scooters (regarded as miniature motor cycles) are now established on the market, they were sufficiently novel to be an attraction to many of the visitors, especially the ladies, who, by the way, never seem nervous in taking their first ride and start away after the briefest instructions concerning the functions of the various levers, often forgetting how to stop them!

1¼ h.p. Four-stroke versus 2½ h.p. Two-stroke.

An acceleration test of these miniatures was the first event—a 1¼ h.p. Kenilworth competing with a 2½ h.p. Autoglider, on the knock-out principle; the latter granting the smaller machine twenty yards in 120 yards.

Notwithstanding the fact that the Autoglider is fitted with a Villiers engine, and the little Kenilworth only a tiny four-stroke, the light weight of the latter was found of great advantage in getting off the mark, with the result that it won several of the heats, the semi-final, and eventually the final. The Autoglider once under way, however, rapidly overhauled the Kenilworth, and, as a result, close finishes were the rule.

The Value of an Outside Flywheel.

A slow race up the long and steep grades of Edge Hill revealed the advantages of a twin engine with an outside flywheel, for the 8 h.p Rex-Blackburne was easily the winner in the sidecar class, while a chain-driven Triumph proved the victor among the solo mounts. A tortoise race along the level became so strenuously fought out at about half a mile an hour that the question of balance and ease of handling decided it. A healthy tortoise in good training could have raced the winning 3½ h.p. Sports Sunbeam.

Speed.

Then followed an event the reverse of this. A "hot stuff" Norton being in the Isle of Man, a fast climb was arranged up the hill between a 1921 Triumph and a Sports Sunbeam, the latter bounding over the top first at—well, over legal limit!

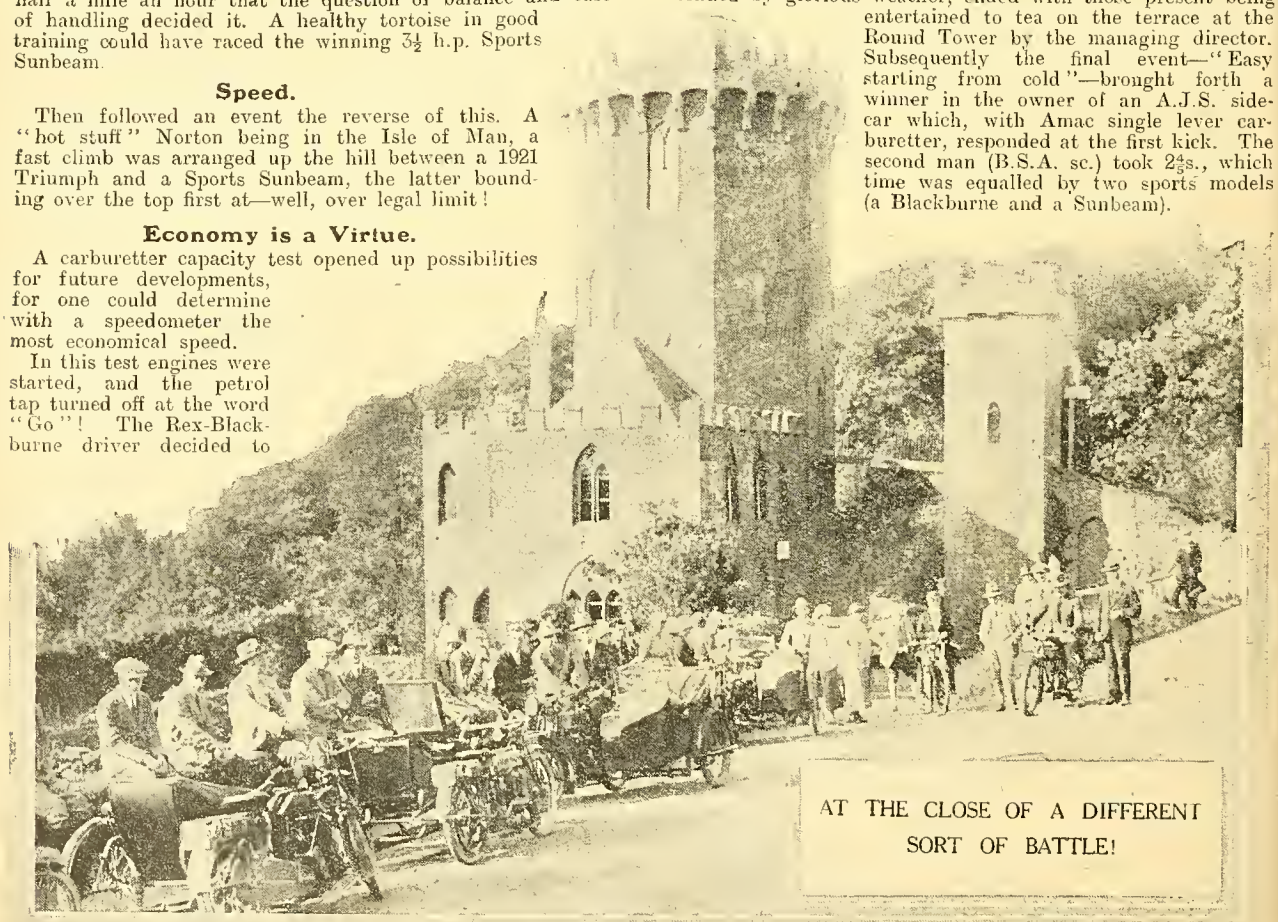
Economy is a Virtue.

A carburetter capacity test opened up possibilities for future developments, for one could determine with a speedometer the most economical speed.

In this test engines were started, and the petrol tap turned off at the word "Go"! The Rex-Blackburne driver decided to get immediately into top gear and to drive at about 7 m.p.h., which proved to be extravagant and not at all proportionate to the usual 50 m.p.g. obtained on the run. Those who rode at their usual cruising speed did much better, as the following result will show:

1,520 Yards with the Petrol Tap Turned Off.

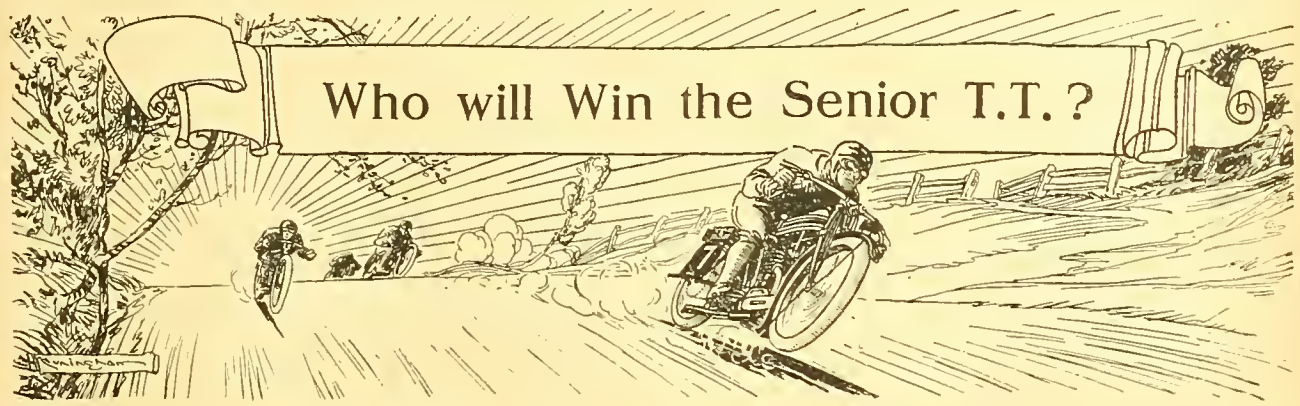
	Yards.
2¾ Douglas (Claudel carburetter)	1,520
3½ Sports Sunbeam (Amac two-lever carburetter)	1,487
3½ Sunbeam (Amac two-lever carburetter) ...	996
4 Triumph (Triumph carburetter)	954
2½ Autoglider (Senspray carburetter)	953
1¼ Kenilworth (Vici carburetter)	708
4 Triumph sc. (Triumph carburetter)	698
4¼ B.S.A. sc. (B.S.A. carburetter)	690
5-6 A.J.S. sc. (Amac one-lever carburetter) ...	681
2¾ Reynolds Runabout (Cox Atmos carburetter)	652
4 Blackburne (B. and B. carburetter)	520
8 Rex-Blackburne sc. (Binks carburetter)	390



Eighteen Hairpin Bends in a Quarter of a Mile.

To decide the point as to which is the faster on hairpin bends—solo or sidecar—several of *The Motor Cycle* staff were timed on six circuits of a triangular sward making a distance of a quarter of a mile. This was a test of skill, as one leg of the triangle was on a down grade, the next one on an up grade, and the third along the level. The following times were recorded:

	m. s.		m. s.
2½ Autoglider	1 41	4 Triumph	1 23
1¼ Kenilworth	1 34	5-6 A.J.S. sc.	1 22
3½ Sports Sunbeam ..	1 34	2¾ Douglas	1 20
4¼ B.S.A. sc.	1 33		



The winner's speed on his Douglas was 11¼ m.p.h.

A sporting and interesting afternoon's programme, attended by glorious weather, ended with those present being entertained to tea on the terrace at the Round Tower by the managing director. Subsequently the final event—"Easy starting from cold"—brought forth a winner in the owner of an A.J.S. sidecar which, with Amac single lever carburetter, responded at the first kick. The second man (B.S.A. sc.) took 2⅘s., which time was equalled by two sports models (a Blackburne and a Sunbeam).

AT THE CLOSE OF A DIFFERENT SORT OF BATTLE!

Built to commemorate the Battle of Edge Hill—the Castle Inn, on the crest of the Edge Hill range in Warwickshire—a familiar landmark for many miles around. It is to-day the venue of many a gathering of motor cyclists, and an annual rendezvous for members of *The Motor Cycle* staff and their colleagues of sister journals.

Who will Win the Senior T.T.?

By MICHAEL KIRK.

Will the Race go to Wolverhampton Again? Claims of Coventry, Birmingham, and Bristol.

MY annual *début* in these columns as a tipster is always frightfully embarrassing, but never more so than at this moment. Club talk admits that we are going to see the race of the century. Experts agree that the 500 c.c. machine is getting too fast for the course, and that 1922 will probably see the Senior event contested by engines of 350 c.c.; in other words, any of the sixty-eight entries with a clean run and a decent jock could probably beat last year's winning time. A quarter of the men have never ridden in the T.T. before, and of these newcomers a sprinkling certainly suffers from what Shakespeare called "vaunting ambition that o'erleaps itself," but others have been spotted, and trained by 'cute racing managers with an eye to absolute victory. All the famous cracks are engaged, and at least ten of the principal factories have been spending money lavishly during the past twelve months in order to win. I would sooner try to foretell when I shall suffer my next puncture than pick the winner of the 1921 T.T.

"Horses for Courses."

Perhaps my task is not quite so black as it looks. Any top-notch 3½ h.p. could average 55 m.p.h. in the race on two conditions, viz., that it was superbly ridden, and that it stood up. The B.M.C.R.C. held an exercise canter at Brooklands on May 21st, when the Douglas, Indian, Martin, and Norton lasted the course well. Past history guarantees the stamina of the Sunbeam. Triumphs have nine machines, four with Ricardo engines, and five with side valve engines—this team plainly means business with a very big B. The B.S.A. people have not devoted a year to producing speedsters without due confidence. Scotts either abstain from the race or lay their fingers on the Trophy. Blackburnes aspire to be our super-engine builders. Rovers have worked a good deal harder than the public know. The James team are dark horses, but the firm generally shines when it is out for blood. Consequently I see no sense in backing a particular machine, and unless cruel bad luck intervenes, I think the human factor will decide the race.

Was it the poet Gray who sang:

> Full many a Dance is born to jazz unseen,
> And waste his exhaust in the village lane.

But this year the competition managers have gone over the ranks of trials men with a small-toothed comb in the effort to unearth potential T.T. winners. One of these as yet unknown heroes is quite likely to upset all our calculations. But on form, as I know it, there are three men whom nobody can hold if they ride their best and escape trouble. One is the popular favourite, George Dance, at once the most capable and the most modest of all our regular racing men.

No. 2 is H. R. Davies, who would almost certainly start co-favourite if only he were mounted over a 500 c.c. engine; his little 350 c.c. A.J.S. is being quietly backed in some quarters to defeat all the Senior entry: it was fast enough to do so last year (he has made one of the fastest practice laps this year), and toughened by another twelve months of development, it is capable of anything.

The third rider whose chances I personally rank level with Dance's, if we credit both with a non-stop, is C. P. Wood. This magnificent rider is practically unknown in the South of England, and he has certainly yet to show what he can do in the T.T.; but you can take it from me that Yorkshire "expects" him. The entry list is full of famous names, all honestly earned by brilliant work; but I do not know anybody who can outride this trio, and in a non-stop I should expect Dance and Wood to fight out the finish with Davies close up.

When Popular Tips Drop Out.

In actual fact, it is highly improbable that the favourites will get a clean run. Year after year we see the popular tips drop out, and new men storming on to victory. Outside my trio it is simply impossible to make selections. For instance, if the B.S.A. 'buses are as good as they look, as good as a year of intensive culture from Heather and Pearsall should guarantee, and if Gus Kuhn rides his B.S.A. as demoniacally as he can ride a little 'un? If the Nortons enjoy the luck they deserve—Brown was second last year, Shaw was seventh, and Horsman is riding as he has never ridden before; besides, an out-and-out Norton victory is long overdue.

In the Sunbeam team De la Hay is regarded by some judges as a more probable winner than Dance. He rode a splendid race last year, when his last lap was actually his fastest by over 2m. The Brooklands canter on May 21st showed that the Douglas team is in much the same mood as the Kaiser was on August

Who will Win the Senior T.T.?—

4th, 1914; they expect to be home as conquerors in next to no time. Their new man, Thorpe, is still a dark horse. Emerson is, to my mind, more of a track man than a road man; but A. H. Alexander is as near as no matter a Scottish edition of Dance. The fellow who finishes ahead of these three Douglases will probably have to travel.

The American Entry.

Indians? They were too slow last year. They are not likely to under-estimate the pace twice running. You can guess whta their team is like if you note that an unknown man named Malkow has pushed H. R. Harveyson of all people down to fourth place. At Brooklands, rightly or wrongly, I formed the impression that Le Vack was not bestirring himself unduly, but was rather more interested to see how his engine would stand an hour of—shall we guess, not *quite* full throttle? How Billy Wells would enjoy again annexing the first three places in a year when the big British factories were going baldheaded for the spoils. All the same I do not think it will be his turn this time.

We have still to analyse the sensational Triumph team. The four Ricardo engines will be ridden by Shemans, Gill, Sgonina, and another. The works rule against entering married men in the race has been relaxed because Shemans could not be kept off the saddle. The o.h.v. Triumph keeps coolish when lapping Brooklands at 60 m.p.h. on a gear of 5.6 to 1. Yet this engine is regarded by the Triumph Co. as their second string. They are racing it, they say, for experimental purposes, and pin their hopes of victory to the side-by-side valve engine, which represents wizard Stanley's latest brainwave. Five of the latter are engaged, and the factory team apparently consists of Townshend (the ex-Sunbeam expert), Edmond, and Watson-Bourne. Another nasty lot to beat.

I am glad I don't know more about the Rover, Blackburne, and James crowds, for the race is already quite sufficiently bewildering. Neither am I in touch with the Scott second and third strings, though a strong Yorkshire tip has reached me, "Watch Stanfield if anything happens to Clarence." There are a few individual entries, which need not be taken very seriously in view of the massed factory opposition. I am writing at a time when practice has not gone far enough to show up the merits of the new jockeys, nor yet to indicate how some of the "dark" engines are sticking it. I am prepared to look excessively foolish by teatime on Senior day, but if I had to lay out my money at this moment, the bulk would go on G. Dance and C. P. Wood; and I should be more anxious about being deprived of it by a Douglas than by any other.

AFTER THE MORNING DIP.

On the lovely Devonshire coast. One of the large double-seater sidecars (used for hiring purposes by the X Motor Co., of Torquay) on Oddicombe beach, Babbacombe.

Cambridge University M.C.C.

Mr. G. Rae Arnot, Trinity College, has now taken over the post of secretary of this club.

Berwick and District M.C.

Owing to the threatening weather, the turn-out at the recent reliability trial was not as large as might have been expected from a club with a membership of well over one hundred. The ascent of Carter Bar was observed, and brake and restarting tests were held on Corby Bank. Results:

1, John I. Elder (7 A.J.S. sc.), 2 marks lost; 2, W. H. Dodds (4 Triumph), 3 marks lost; 3, H. T. Taylor (3½ Rudge Multi), 5 marks lost.

Worcester and District M.C.C.

A G.N. cycle car, driven by O. Hayes, gained the premier award in the recent trial for "Sidecars v. Small Cars." Other results follow:

FIRST-CLASS AWARDS.—*Private:* S. J. Melhuish (7 A.J.S. sc.). *Trade:* B. Alan Hill (8 Rover).
SECOND-CLASS AWARDS.—*Private:* Not won. *Trade:* Cyril Williams (G.N.).
THIRD-CLASS AWARDS.—*Private:* Not won. *Trade:* B. Bladder (4½ Humber sc.).
SPECIAL CLUB AWARDS.—*Private:* O. Hayes (——). *Trade:* B. Alan Hill (8 Rover).

Special attention is called to the performance of Mrs. F. G. Gibbs (3½ Sunbeam sc.).

West Birmingham M.C.C.

So severe was the reliability trial held on the 4th inst. that only one rider, D. B. Cranmore (3¾ Scott), registered a non-stop run. An excellent performance was also made by Mrs. H. G. Galc (2¼ Velocette), who, however, had bad luck on one hairpin corner, otherwise completing the run without a stop. The course was almost impossible for sidecars, and the only entrant, R. W. Cowley (4¼ B.S.A. sc.), had a great struggle to get round.

East Midland Centre A.C.U.

On the 4th inst. there was a meet of motor cyclists in the East Midland Centre at Monsal Dale, Derbyshire, where there assembled about 300 club members, many of whom had travelled over eighty miles. There were representatives from the following clubs: Derby, Ilkeston, Leicester, Lincoln, Loughborough, Mansfield, Nottingham, Sutton-in-Ashfield, Grantham, Burton-on-Trent, and Stamford. A feature of the entry was a quartette of the new Brough Superiors, which were much admired. A slow hill-climb arranged by the North Derbyshire Club proved a great success. The entry fees were devoted to the Chesterfield Royal Hospital, and were generously supplemented by a collection taken from the hundreds of spectators on the hill. The winner of the slow climb proved to be E. Chandler, of Mansfield, on a 7-9 h.p. D.M.C.—a machine designed and built by himself.

Bucks County M.C.C.

The recent two hundred miles reliability trial for the Vernon Cup resulted as follows:

1, W. G. Harding (4 Triumph sc.), who thus wins the cup for the second year in succession; 2, W. F. Johnson (7 A.J.S. sc.); 3, R. Pugh (4 Triumph sc.).

Keighley M.C.

Results with awards of the recent hill-climb have now been confirmed, and are as follows:

COULTON TROPHY AND GOLD MEDAL.—A. Shuttleworth (2¼ O.K. Junior).
SILVER MEDAL.—P. Beadman (7-9 Harley sc.).
BRONZE MEDAL.—W. Rycroft (2¾ Edmund).
GOLD MEDAL (Fastest Solo).—A. Jackson (3½ Norton).
GOLD MEDAL (Fastest Passenger).—A. Jackson (3½ Norton sc.).

Week-end Club Events.

June 16.—Canterbury and District M.C.C. Fuel Consumption Test.
June 18.—North-West London M.C.C. and North London M.C.C. Inter-club Hill-climb.
June 18.—Coventry Triangle M.C. Gymkhana.
June 18.—Saltcoats and District M.C.C. Picnic.
June 18.—Holwood M.C.C. Club Run to Leith Hill.
June 18.—Coventry and Warwickshire M.C. Social Run and Picnic.
June 18. Surrey M.C.C. Triumph Cup Reliability Trial.
June 18-19.—Surbiton and District M.C.C. Week-end Run to Bournemouth.
June 18-19.—Leeds and District M.C. Club Run to London.
June 18-19. Public Schools M.C.C. "Touch Nothing" Run.—
June 19.—West Birmingham M.C.C. "Old Crocks" Competition.
June 19.—Rochester, Chatham, and District M.C. and L.C.C. Club Run to Dymchurch.
June 19.—Ivy M.C.C. (Wolverhampton). Club Run to Llangollen.
June 19.—Central London M.C.C. Club Run to Welwyn.
June 19.—North-West London M.C.C. River Picnic at Bourne End.
June 19. Ilkley M.C. and L.C.C. Team Trial for Heaningway Trophy.
June 19.—Wakefield and District M.C.C. Club Run to Ingleton.
June 19.—Stafford and District M.C.C. Club Run.
June 19.—Wolverhampton Auto Nomads. Club Run to Malvern.
June 19.—Halifax and District M.C.C. Club Run to Burnsall.

June 19.—Wolverhampton M.C.C. Social Run.
June 19.—Harrogate and District M.C.C. Reliability Trial for Muratti Trophy.
June 19.—Stamford and District M.C.C. and Peterborough M.C.C. Inter-club Reliability Trial.
June 19.—Sheffield M.C.C. Club Run to Buxton.
June 19.—Northern M.C. Flexibility Hill-climb.
June 19.—Exeter M.C. and J.C.C. Club Run to Shaldon.
June 19.—Eastbourne and District M.C.C. Blakemarsh and Doull Competition.
June 19.—Woolwich, Plumstead, and District M.C. Wilmot Cup Trial.
June 19.—Berwick and District M.C. Consistency Hill-climb.
June 19.—Basingstoke and District M.C.C. and L.C.C. Club Run.
June 19.—Doncaster and District M.C.C. Social Run to Bewer Castle.
June 19.—Liverpool M.C. Social Run to Blackpool.
June 19.—Kidderminster M.C.C. Social Run.
June 19.—North Wales M.C.C. Picnic.
June 19.—Brighton and Hove M.C.C. Dobson Trophy Trial.
June 22.—Reigate, Redhill, and District M.C.C. Speed-judging Competition.
June 22.—Bridgwater and District M.C.C. and Taunton and District M.C. and L.C.C. Inter-club Run to Cheddar.
June 22.—Heleasburgh M.C.C. Flexibility Trial.
June 23.—Worcester and District M.C.C. Speed Trials.

Macclesfield M.C.

C. R. M. Mills, on a Morgan, with a total loss of two marks, proves to be the winner of the recent reliability trial. S. Bann (7 Matchless sc.) and W. M. C. Preston (3½ Sunbeam sc.) were second and third with a loss of three and nine marks respectively.

Ilkley M.C. and L.C.C.

There were a long list of entries and many spectators at the knock-out hill-climb held on Barden Fell. Competitors were handicapped from the scratch man, W. Bradley (7-9 Indian). Results:

1, J. Stanfield 2¾ Edmund), 28s. handicap (Dixon cup and gold medal.; 2, W. R. Haggas (4 Triumph), 12s. handicap (silver medal); 3, H. Foulds (4¼ B.S.A.), 26s. handicap (bronze medal); 4. W. Bradley (7-9 Indian), scratch.

Norfolk M.C. and L.C.C.

Full formula and time results are now available of the very successful hill-climb held on Ringland on the 26th ult. They are as follows:

EVENT 1.—On time: 1, Miss K. Riches (2¼ Levis), 28⅘s., and A. H. Bryant (2¾ New Hudson), 28⅘s., tied for Mr. E. M. Wood's prize; 3, E. M. Wood (2¼ Levis), 30⅘s. On formula: 1, Miss K. Riches (2¼ Levis), 100%, club first prize; 2, A. H. Bryant (2¼ New Hudson), 98%; 3, A. Adcock (2¼ Levis), 93%.

EVENT 2.—Walk over, A. Adcock (2¾ Douglas), 29⅘s., club first prize.

EVENT 3.—On time: 1, R. M. Knowles (3½ Norton), 20s., Mr. Chas. Bunting's prize; 2, H. F. Mase (3 A.B.C.), 20⅘s.; 3, F. T. Ebbage (3 A.B.C.), 23⅘s. On formula: 1, H. F. Mase (3 A.B.C.), 100%, club first prize; 2, R. M. Knowles (3½ Norton), 80%; 3, F. T. Ebbage (3 A.B.C.), 67%.

EVENT 4.—On time: 1, J. C. Trendall (4 Triumph), 22⅘s., club first prize; 2, G. H. Hanworth (4 Norton), 23s.; 3, S. A. Towlson (4 Norton), 24⅘s. On formula: 1, G. H. Hanworth (4 Norton), 100%, club first prize; 2, J. C. Trendall (4 Triumph), 92%; 3, S. A. Towlson (4 Norton), 84.5%.

EVENT 5.—On time: 1, W. F. Ayrton (8 Zenith), 19⅘s., club first prize; 2, R. A. Daniels (7-9 Rudge), 20⅘s.; 3, M. G. Bagshaw (7 Harley-Davidson), 25⅘s.

EVENT 6.—On time: 1, H. T. Chapman (4 Triumph), 28⅘s., club first prize; 2, A. S. Bagshaw (4 Triumph), 28⅘s.; 3, A. Adcock (3½ P. and M.), 38s. On formula: 1, H. T. Chapman (4 Triumph), 100%, club first prize; 2, A. S. Bagshaw (4 Triumph), 98.5%; 3, A. Adcock (3½ P. and M.), 73.6%.

EVENT 7.—On time: 1, E. M. Wood (7 Indian) 23⅘s., club first prize; 2, H. D. Wheeler (8 Imperial-Jap), 25⅘s.; 3, H. J. Kett (7-9 Rudge), 26s. On formula: 1, E. M. Wood (7 Indian), 100%, club first prize; 2, H. J. Kett (7-9 Rudge), 67%; 3, S. A. Towlson (4 Norton), 58.5%.

EVENT 10.—1, H. D. Wheeler (8 Imperial-Jap), 22⅘s., Mr. A. Bullen's prize (fastest sidecar time of day); 2, M. G. Bagshaw (7 Harley-Davidson), 25⅘s.

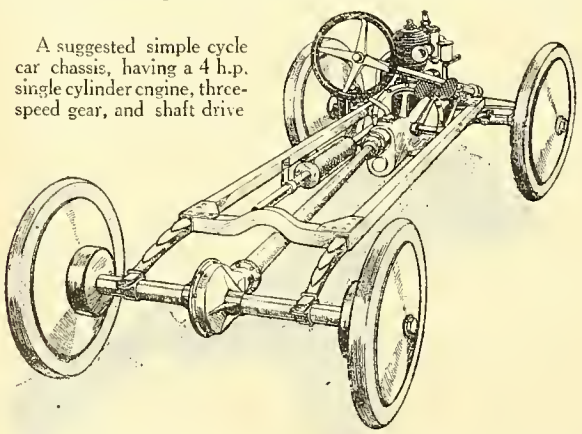
EVENT 11.—1, R. M. Knowles (3½ Norton), 16⅘s., club first prize; 2, R. A. Daniels (3½ Norton), 21s., club second prize; 3, H. F. Mase (3 A.B.C.), 21⅘s., club third prize.

EVENT 12.—1, J. Morse (7 Indian), 20⅘s., and R. O. Clark (8 Zenith), 20⅘s., tied for club first prize; 3, R. A. Daniels (7-9 Rudge), 21⅘s.

EVENT 13.—1, R. A. Daniels (3½ Norton), 17⅘s., club first prize; 2, R. M. Knowles (3½ Norton), 17⅘s., club second prize; 3, C. J. Trendall (4 Triumph), 20s.

EVENT 14.—1, R. O. Clark (8 Zenith), 15⅘s., Mr. H. D. Wheeler's prize (fastest time of day); 2, W. F. Ayrton (8 Zenith), 17⅘s.; 3, J. Morse (7 Indian), 18⅘s.

EVENT 15.—Slow race: 1, H. J. Hannent (4 Indian), 3m. 30⅘s., Sheriff's prize; 2, R. O. Clark (2¼ Levis), 3m. 8⅘s., club second prize.



EVENT 16.—Relay race: Winning pair, R. M. Knowles (3½ Norton) and R. A. Daniels (3½ Norton), 45.6s., club first prize.

The Cycle Car of Moderate Price

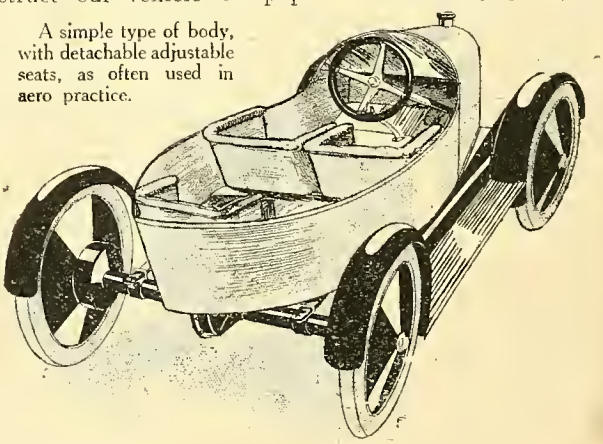
A Suggested Design eliminating all Unnecessary Refinements without departing from the Conventional.

THE £100 car! How often has this ideal been waved before our longing eyes! How often have designs been produced, and how seldom have these designs materialised! The actual figure of £100 is an ideal, but provided the price does not exceed that of a medium-powered motor cycle and sidecar there is an enormous market for a light four-wheeler which has hardly yet been touched. Capt. Carden and a few other enthusiasts have shown us what can be done, and such machines as the Carden, A.V., and Tamplin are doing first-class pioneer work,

A suggested simple cycle car chassis, having a 4 h.p. single cylinder engine, three-speed gear, and shaft drive

but so far only the fringe of the market has been touched.

Whatever the lines on which the future cycle car develops (and it will develop) it must be a compromise, for it is ridiculous to demand a Rolls-Royce for the price of a sidecar outfit, and the man who is to succeed will be he who most carefully studies the mentality of the buying public.



Now the state of mind of the average motor cyclist—and it is he who will do most of the pro-

selytising—is something of a puzzle. Why, for instance, should the man who is perfectly content to drive his family about on a single-cylinder motor cycle with chain and belt drive, immediately demand a four-cylinder water-cooled engine, three speeds and reverse and shaft drive, when he sports an extra wheel?

Design by Elimination.

The miniature car will always have its adherents; but the difficulty in designing a cycle car is to know what can be left out and not what can be added. Popular opinion undoubtedly demands shaft drive, and really there is no reason why it should not have it. If all manufacturing costs are considered, there is little to choose between a shaft with a simple differential-less back axle and a solid axle with chains or belts or both and their attendant countershafts, bearings, and erecting costs.

Let us start, then, with a shaft drive and one-piece live axle, and see what can be eliminated as we construct our vehicle on paper. One brake on each

A simple type of body, with detachable adjustable seats, as often used in aero practice.

The Cycle Car of Moderate Price.—

wheel, operated independently, will comply with the law, and will provide at least as good decelerative effect as that obtained on a motor cycle and sidecar.

The gear box requires more thought, since the number of ratios depends to some extent on the size of engine employed. First, however, is a reverse necessary?

In the ultra-light type of vehicle under consideration the answer is in the negative. A reverse is certainly a luxury, but one cannot expect luxuries without paying for them, and a reverse involves quite a considerable amount of outlay in gear wheels, bearings, striking gear and material.

Choosing the Power-unit.

A single-cylinder engine of about 600 c.c. provides ample power for propelling a motor cycle and sidecar, and will consequently suit our cycle car, which will certainly be no heavier or worse streamlined; but a single-cylinder engine will involve a three-speed gear.

On the other hand, a 1,000 c.c. twin will cost more to produce as an engine, though only two gear ratios would be needed. The *average* rider does not require to climb Park Rash or the Screw Road, and the Enfields and Morgans have shown us what can be done with only two gears. The choice between single with three speeds and twin with two is a matter of opinion, but probably the single would be the more economical in use, and since a single, if carefully balanced, is a simple and satisfactory engine and gives admirable satisfaction in motor cycle and sidecar service, we may accept it for the time being.

A Carden on Alms Hill. This little light four-wheeler is marketed at less than £140 complete with essential accessories.

Channel Steel for the Chassis.

Composite wood and steel plate frames may be cheap in small quantities, but for serious production it would be cheaper to use a channel steel frame which may be a simple rectangle and infinitely less expensive than the frame and chassis of a motor cycle and sidecar.

Quarter-elliptic springs all round can be arranged so as to provide satisfactory suspension, and the ends in each case should be rigidly attached to the axles so that no torque or radius rods need be employed.

A plain tubular front axle with well laid out cable and bobbin steering is all that is required, but an alternative steering gear may be arranged with direct connections, a spur gear reduction being fitted at the base of the steering column.

So much for the general layout, which is, however, capable of considerable variation in detail. A two-stroke engine might be employed to smooth the torque and reduce costs, though petrol consumption would be increased and cooling might become a more serious problem.

Bodywork.

An engine and gear unit would be neater and probably cheaper than separate engine and gear box, since if the clutch cover were spigoted to the crank case no further lining up would be necessary, and the whole unit could be removed for overhaul when required.

The question of bodywork is important, since much money may be spent in this direction with but little useful result. Perhaps the best results may be obtained by forming an outer shell of vertical sides with separate adjustable and removable seats. By this means accommodation for two adults and two children can be arranged with equal protection, or the children's seats may be removed to make room for luggage.

Such a vehicle as that described could be produced for a very reasonable sum, and would be a sound utilitarian machine for all normal purposes. Admittedly, it is without frills, and might not suit the sporting solo motor cyclist. Nevertheless it would fill an empty niche in the market, and should have colossal sales.

Many readers will have suggestions to make, but it must be remembered that electric lighting, self-starters, detachable wheels, reverse gears, etc., all cost money, and are luxuries rather than necessities.

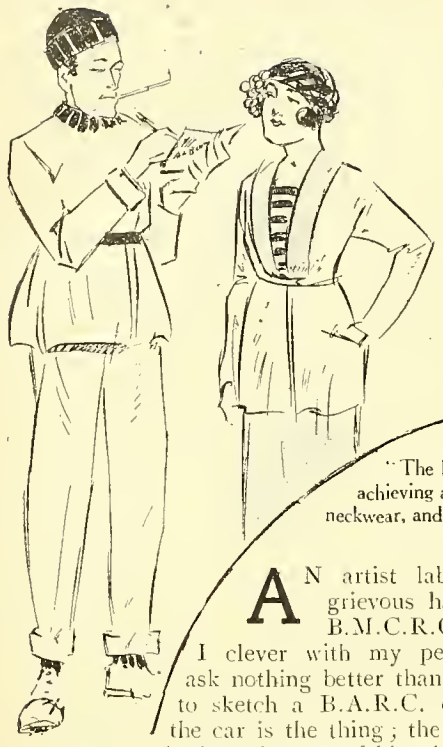
A light four-wheeler as suggested could be nicely finished in serviceable grey paint with black enamelled guards, which would look much better than cheap and bad coach finish.

UBIQUE.

NEXT THURSDAY.

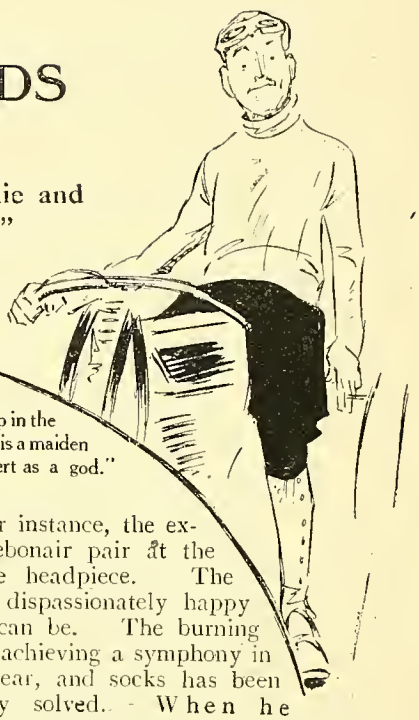
THE MOTOR CYCLE

Will contain a fully illustrated report of the



SENIOR TOURIST TROPHY RACE,

as well as authoritative articles on the technical aspects of both races.

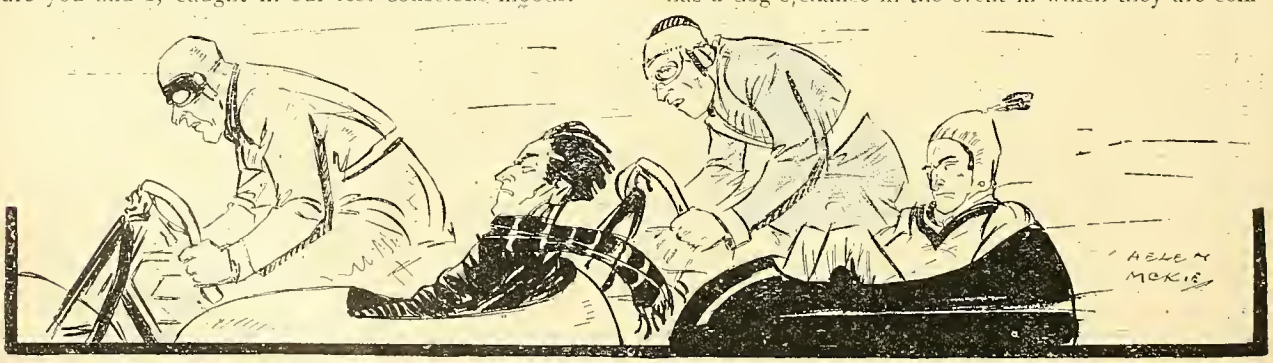


JUNE 23rd. 4d.

SOME BROOKLANDS TYPES.

Sketched by Helen McKie and analysed by "Ixion."

"The burning problem of achieving a symphony in cap, neckwear, and socks."

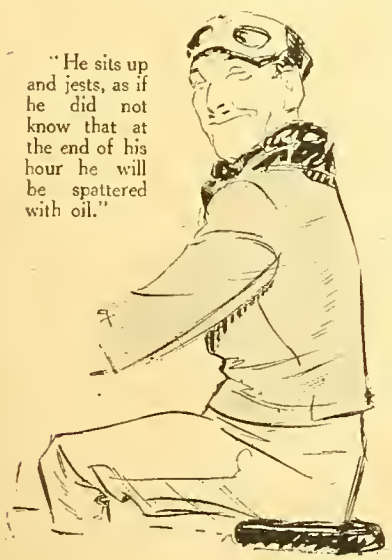


"Somewhere up in the Midlands there is a maiden who regards Bert as a god."

AN artist labours under grievous handicaps at a B.M.C.R.C. meet. Were I clever with my pencil I would ask nothing better than a commission to sketch a B.A.R.C. event. There the car is the thing; the driver's head is the only part of him that shows, and you indicate it as a pimple with a few tailing wind lines on the top of a black mass mistily suggested in the front of a cyclone. But a stripped motor bicycle is a perfectly beastly thing to draw, especially when it is speeding, and the exposed driver constitutes about seven-tenths of the apparition. Moreover, it goes much too fast. Your only hope would be to get a $\frac{1}{2000}$th sec. snap with a reflex camera close up, and then make the photograph the basis of your drawing. Moreover, until the last meeting, the authorities kept us in the paddock, and as the distant riders circled round the gigantic track, they looked as devoid of detail as a midge on a lofty ceiling. So Helen McKie, womanlike, turns up her nose at the unintelligible racing, and concentrates her attention on the paddock. You will therefore go to her in vain for impressions of Emerson slogging away at the hour record, or Judd beating "ninety" on a Norton, or the big Indians banging the flying kilo. into unrecognisable pulp. But her paddock types are more interesting than the speed wizards, just because they are typical. They are you and I, caught in our less conscious moods.

Take, for instance, the excessively debonair pair at the left of the headpiece. The knut is as dispassionately happy as a knut can be. The burning problem of achieving a symphony in cap, neckwear, and socks has been triumphantly solved. When he arrived at the track there was only one fly in the ointment. He had but £1 in ready money, his tank was almost empty, and there was the question of supper for his fairy. The card told him that Bridgman had got 2m. 12s. start in an 8½ mile race. He chanced to know that Bridgman is the Indian secretary. He found a bookie who was unaware of this significant fact. The £1 is well and truly on at "tens." So his temporary financial anxieties are soothed. His companion? Any girl can place her. At least three well-dressed, good-looking, and youthful men are peeping at her with keen interest. She knows that her attire is brand new, tasteful, and creaseless. In the immediate neighbourhood there are several girls making mental notes of her get-up. "Paradise enow," as the immortal Khayyam says.

Miss McKie, as befits an innocent girl, probably did not grasp the inward significance of the two sidecar outfits, which she has depicted racing almost abreast. But her honest pencil has nevertheless fully revealed the facts. Quite obviously, neither of them has a dog's chance in the event in which they are com-



"Quite obviously, neither of them has a dog's chance in the event in which they are competing."

Some Brooklands Types.—

peting. The front pair innocently entered with every intention of annexing a gold cup, and will be sorely puzzled in the course of the next lap to know why the field is roaring past them so contemptuously. They are green at the game. The driver does not realise that his nose should be a foot lower; that his back should be horizontal instead of at 45°; that his 'bus is much too standard and hopelessly undertuned; and that his sidecar is more adapted to conveying a *petite* flapper than to minimising wind resistance. His passenger is wholly ignorant of the fact that wind resistance increases as the square of the velocity. Next year, if he is still racing, he will have bought a sidecar shaped like a guillemot's egg; he will cut his hair ("prison crop"); he will remove his scarf; and he will burrow down into the chair. At present this verdant green pair are in process of disillusionment, and will snarl out some pungent remarks about shamateurs and factory support when the race is over. The pair who are overhauling them belong to the clever fraternity. Cute Mr. Ebblewhite handicapped them out of victory at the last meeting, and at present they are not out for blood. No! They are merely working up their time allowances by dint of ignominious defeats. Note the sardonic eye which both of them are cocking sideways. They are ready to flatten right down if they perceive an official studying them. The sidecar man is manfully butting his head into the wind and thereby knocking at least 5 m.p.h. off their speed. The driver has his head well up, and his incurved "tummy" is a regular wind trap. Let either of them spot Loughborough or any other knowing steward with his eye on them, and the pair will horizontalise themselves so that the outfit will accelerate ten miles an hour in a tenth of a second. Probably their manœuvres will escape notice; they will get an extra thirty-nine seconds start at the next meeting; then they will employ some person to put a tenner on them at outsiders' price; the consequent proceedings will be convivial to a degree.

". . . wears a leather helmet with ear rolls and goggle attachment, even when he is dismounted."

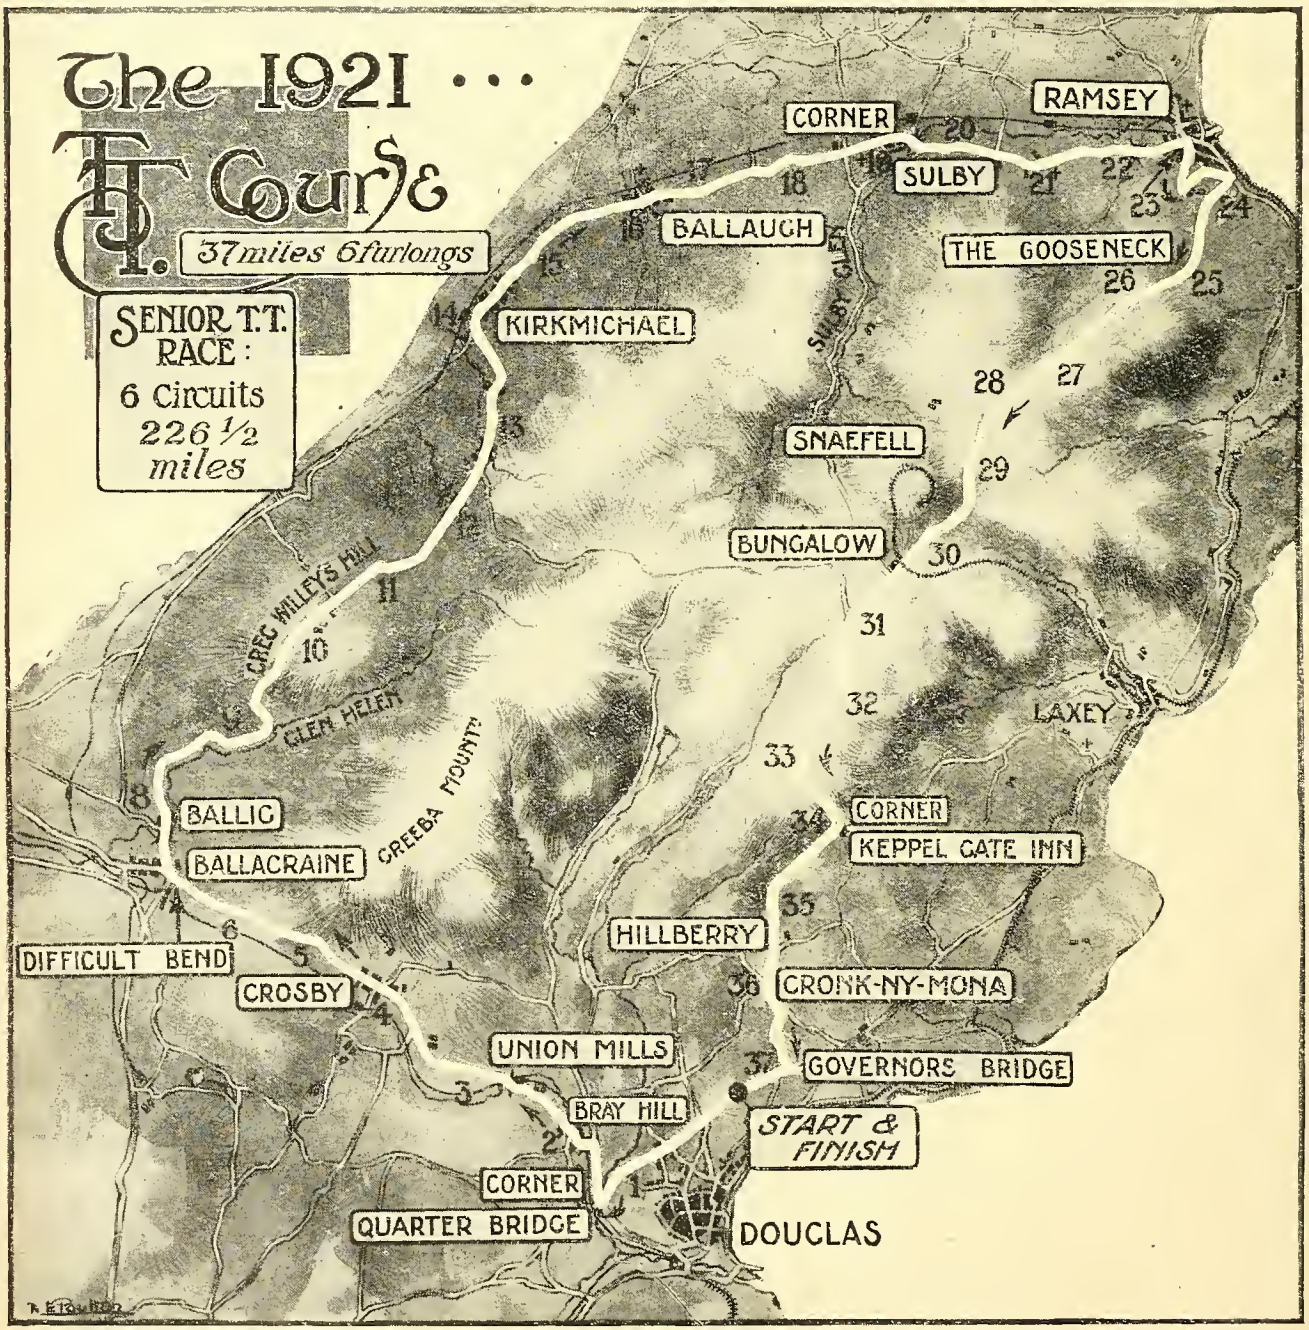
"He sits up and jests, as if he did not know that at the end of his hour he will be spattered with oil."

At the right of my title piece you will perceive an unmistakable character. He is a factory mechanic, and he is a favourite. To his left front is a serried battalion of press photographers, lining up their cameras. They have not asked him, studio wise, "to look pleasant." Pressmen never demand the impossible. Somewhere up in the Midlands there is a maiden called Amelia who regards Bert as a god. This is Bert's most godlike pose. Miss McKie's rather pitiless sketch of him will be carefully cut out of *The Motor Cycle* next Thursday morning and pinned up over Amelia's dressing table. For the rest Bert is really rather a somebody. He is an expert tuner, and a magnificent rider. Out of that rather ugly 2 cwt. of metal he is shortly going to coax about 5 m.p.h. more than any of his rivals can command. He is going to risk his skinny little neck to earn a little glory for himself, to increase the dividends of his firm's shareholders, and to give the assembled multitude a brief spectacle. He is compounded of superb pluck, extreme dexterity, a specialised intelligence, and a generalised ignorance.

Motor Cyclists of Other Types.

The other three gentlemen are equally typical. The large perspiring person is above all a conventionalist, though he would be remarkably irritated if you told him so. He is a motor cyclist of the knutty type, and as such wears a leather helmet with ear rolls and goggle attachment. Even when he is dismounted. Even on the Brooklands concrete with the thermometer at 100° in the shade. Moreover, he has not so much as removed his Ledux waterproofs. Consequently, he is bathed in perspiration, and, as our artist spotted him, some spectacle has arrested him in the act of mopping his brow. I am in a little doubt as to the nature of the attraction. Probably feminine. I *think* a fairy has glanced at him. He is the kind of fellow who takes every eye for a glad eye.

The perky little fellow on the saddle comes in a different catalogue. He is jealous for the credit of motor cycling. His sympathies go out to those French aristocrats who powdered their periwigs as they emerged from the Bastille on the last sad journey to where Madame Guillotine awaited them.



"One of England's last hopes in the 1,000 c.c. class . . plucky amateurs who attempt to maintain an unequal struggle."

Some Brooklands Types.—

So he is well-shaven, faultlessly attired, debonair to his finger tips. He sits up and jests, as if he did not know that at the end of his hour race he will be spattered with Castrol from head to foot.

The croucher is the last type on our list. He is one of England's last hopes in the 1,000 c.c. class, and he is burbling down the straight on quarter throttle ready to do battle against Le Vack, Temple, and Davidson on the huge 100 m.p.h. Yankees. We wish him luck. He will need bags of it. He is only an amateur, and his engine is merely a standard touring engine, readied with such skill as he and his local repairer can muster between them. Some day we hope to see a leading British factory consider the 7-9 h.p. racing class more seriously. Till then all honour to the plucky amateurs who attempt to maintain an unequal struggle.

Few thirty-seven mile circuits could be selected in any part of the British Isles which would give greater variety in riding conditions. Acute and dangerous corners are negotiated at Quarter Bridge, Ballacraine, Sulby Bridge, Ramsey, Keppel Gate, and Governor's Bridge. The first ten miles are undulating, but the next ten are almost level, slightly falling grades predominating. Ramsey Hairpin precedes a three-mile climb, which averages 1 in 11, and a slight upward grade follows for a further four miles at an average altitude of 1,500ft. above sea level. Finally come long sweeping descents *via* Keppel Gate, Craig na Baa, and Hilberry, where the highest speeds are accomplished.

C1.4

The Blue Riband of the Motor Cycle World.

Details of To-day's Great Race. Lap Times and Winners of Previous Competitions for the Senior Tourist Trophy.

TO-DAY the classic event of the motor cycle world will be decided. At 9.30 a.m. the first competitor in the Senior Tourist Trophy race will be despatched on his 226 miles race against time. The course is chosen to find out the most desirable features needed in the motor cycle for the man who would ride in ease and comfort without fear of mechanical trouble, for the racing machine of to-day is the father of the touring mount of to-morrow.

Every motor cyclist in this country and overseas will hope that the best man on the best machine will win, and that the fickle goddess of luck will play but a minor part.

PREVIOUS WINNERS.

1920. T. C. de la Hay, single-cylinder Sunbeam (85×88 mm.=499 c.c.), 51.79 m.p.h.

1914. C. G. Pullin, single-cylinder Rudge (85×88 mm. =499 c.c.), 49.4 m.p.h.

1913. H. O. Wood, 2-cylinder, 2-stroke Scott (69.8×63.5 mm.=486 c.c.), 48.2 m.p.h.

1912. F. A. Applebee, 2-cylinder, 2-stroke Scott (69.8×63.5 mm.=486 c.c.), 48.6 m.p.h.

1911. O. C. Godfrey, 2-cylinder Indian (70×76 mm. =584 c.c.), 47.5 m.p.h.

1910. C. R. Collier, 2-cylinder Matchless (85.5×58 mm.=666 c.c.), 50.6 m.p.h.

1909. H. A. Collier, 2-cylinder Matchless (85×65 mm =738 c.c.), 49.0 m.p.h.

1908. Singles: J. Marshall, Triumph (84×86 mm.= 476 c.c.), 40.4 m.p.h. Twins. H. Reed, Dot (75×75 mm.=662 c.c.), 38.5 m.p.h.

1907. Singles: C. R. Collier, Matchless (85×76 mm. =431 c.c.), 38.5 m.p.h. Twins: H. R. Fowler, Norton (75×75 mm.=662 c.c.), 36.2 m.p.h.

LIMITS OF MOTOR CYCLES IN PREVIOUS SENIOR T.T. RACES.

1907. Singles and twins raced separately. Singles were limited to one gallon of fuel per 90 miles; twins, one gallon for 75 miles.

1908. Singles and twins raced separately. Fuel limits. Singles, one gallon per 100 miles; twins, one gallon per 80 miles.

1909. Fuel limits abandoned. One class only. Capacity limits: 500 c.c. singles, 750 c.c. twins.

1910. One class only. Capacity limits: 500 c.c. singles, 670 c.c. twins.

1911. Capacity limits: 500 c.c. singles, 585 c.c. twins.

1912. Capacity limit, 500 c.c. for all types.

1913. Capacity limit, 500 c.c. for all types.

1914. Capacity limit, 500 c.c. for all types.

1920. Capacity limit, 500 c.c. for all types.

THE TYPES THAT HAVE WON.

1907.—Separate classes for singles and twins.

1908.—Separate classes for singles and twins.

1909.—1st, V twin; 2nd, V twin; 3rd, single.

1910.—1st, V twin; 2nd, V twin; 4th, single.

1911.—1st, V twin; 2nd, V twin; 3rd, V twin.

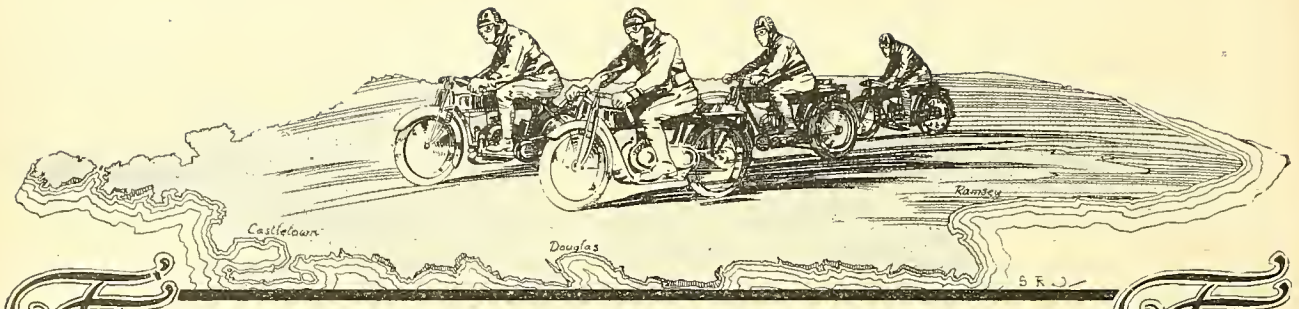
1912.—1st, twin 2-stroke; 2nd, single; 3rd, V twin.

1913.—1st, twin 2-stroke; 2nd, single; 3rd, V twin.

1914.—1st, single; 2nd, single and twin tied; 3rd, V twin.

1920.—1st, single; 2nd, single; 3rd, single.

SOME DETAILS OF THE 1920 RACE.



The winner's lap times:
1st, 44m. 6s. | 2nd, 44m. 58s. | 3rd, 45m. 7s.
4th, 43m. 16s. | 5th, 43m. 43s. | 6th, 44m. 56s.
Total: 4h. 22m. 23s. Average speed: 51.79 m.p.h.
Fastest lap of any competitor: G. Dance (3½ Sunbeam), 40m. 43s.=55.62 m.p.h. (record).

DATE AND TIME OF START: 9.30 a.m., Thursday, June 16th, 1921.
DISTANCE: Six circuits of 37¾ miles. Total distance, 226 miles 4 furlongs.
PRIZES: 1st, The Senior Tourist Trophy to be held for one year, £50 in cash and special gold medal; 2nd, £25; 3rd, £15.
TEAM PRIZE: To be won by a nominated team, who must all finish the course within 30 minutes of the winner.

TABULATED LIST OF 68 ENTRIES FOR TO-DAY'S SENIOR T.T. RACE.

52 Four-stroke Singles. 9 Four-stroke Twins. 6 Two-stroke Twins. 1 Two-stroke Single.

	Entrant.	Driver.	Make and H.P.	No. of Cyl.	Bore and Stroke.	Cubic Capacity.	Size of Tyres.

T.T. NOTES AND NEWS.

Summary of the Practising for To-day's Senior Race.

PRACTISING for the Tourist Trophy races was concluded on Monday of this week. The Junior competitors almost immediately handed in their machines for the preliminary inspection, the Senior riders submitting their mounts for the same purpose yesterday (Wednesday).

* * *

In viewing the practising each morning, one was greatly impressed by the improvement in the majority of machines since the last event. Mechanical troubles were surprisingly few, and were chiefly of only a minor character. Every day it was apparent that during the past twelve months more has been learned re-

Toolbag with armoured lid to fit the top tube on the Nortons.

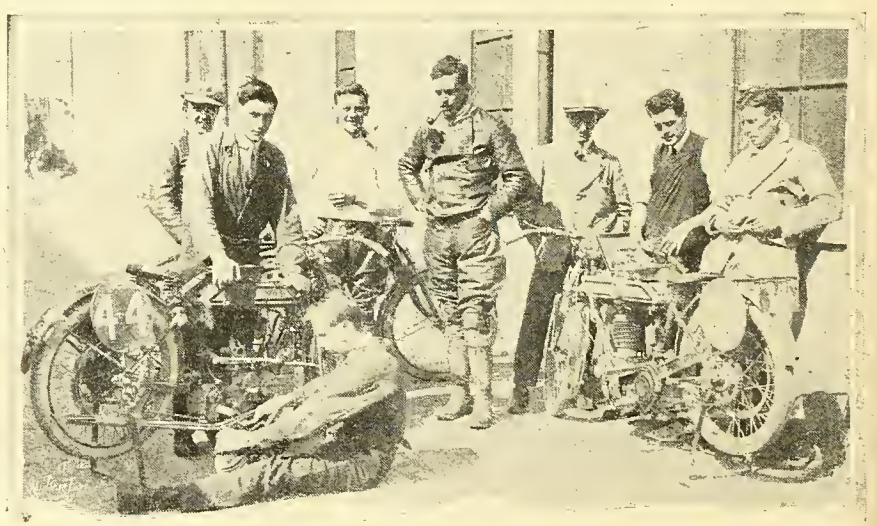
garding engine design and weight distribution than in any similar preceding period.

* * *

There is little of the experimental in this year's race; yet most of the machines are entirely new to the public. There has been less of the last-minute decisions, and more evidence of a long pre-determined programme brought to a successful conclusion. Optimism reigns in every Island garage—optimism which in some cases is fully justified, in others borders on egotism. One can fully understand it. The best brains of each factory have, for nearly twelve months, been concentrated upon producing a motor cycle to win this race, and in most cases the speeds aimed at have been attained, and the expected stamina has been achieved. The difference between the winning machine and the others probably will be that the designers of the former aimed a little higher, for opinions are not unanimous regarding the maximum speed limit of the course.

* * *

Governor's Bridge, being handy to Douglas, was a popular spot for spectators in the early mornings of last week, but the hairpin is so sharp that it is impossible to negotiate it at speed, and those who attempted to take it fast usually took longer over the business than the steadier riders. Quite the prettiest performance in the practising at this spot was made by Tim Wood, who was accompanying Clapham on a Scott-Squirrel. The latter came rather too wide, and had to brake hard to avoid the wall. Meanwhile, Wood dropped neatly round on the inside, and the pair accelerated with a roar, rounding the second bend side by side. Many are disappointed that H. O. (Tim) Wood is not competing in to-day's race, as he is undoubtedly one of the finest riders in the Island. His win in 1913 is still remembered.



Several firms in both Junior and Senior events ran "dark" in practice. Their usual custom was to time from some particular point on the course and stop or slow down before the official finishing point. Others merely drove fast enough to learn the course, keeping a considerable reserve in hand. This custom made the estimation of form more uncertain than ever.

* * *

Some of the best cornering has been done by "Duggie" Brown (Norton), G. Dance ($3\frac{1}{2}$ Sunbeam), Denley ($2\frac{1}{4}$ Velocette), last year's winner, T. C. de la Hay ($3\frac{1}{2}$ Sunbeam), F. C. North ($3\frac{1}{2}$ B.S.A.), V. Ollson ($3\frac{1}{2}$ Sunbeam), and, of course, the Scott riders.

* * *

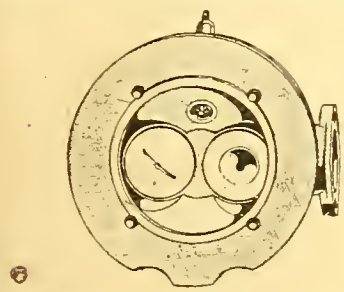
The new Scott retains the distinctive exhaust note which once heard is never forgotten. Expanding and spur gears are operated by separate pedals, and it is amusing to watch the process of changing gears on corners. Nevertheless, the results are most satisfactory and the Scott will start as one of the favourites.

Some of the Norton contingent. Very consistentwork on the course has been achieved by the riders.

A scene at the New Imperial garage in the Isle of Man.

Graham Walker is in charge of the Norton No. 2 team, and is optimistic as to the chances of some of his *protégés*.

* * *



The popularity of the 250 c.c. machine increases. There were three times the number of competitors for *The Motor Cycle* Cup this year than in the 1920 race.

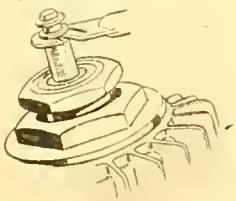
* * *

Owing to the coal strike, Massey-Arran were unable to complete their new frames which were to have embodied several striking features.

* * *

F. C. North (B.S.A.) has had a curious accident. In attempting to operate the oil pedal his foot slipped to the ground in front of the footrest. As a result he twisted his ankle, breaking a small bone. Happily he has progressed favourably, and was expected to ride to-day.

Underside of B.S.A. cylinder head, showing arrangement of valves and plug.



Noel H. Brown, the well-known Liverpool rider, will probably take the place of J. Malkow in the Indian team. The former put in two very useful laps within twelve hours of his arrival on the Island. Experience does count!

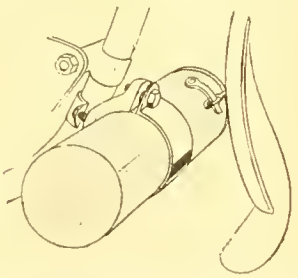
* * *

The Manx Motor Cycle Club did yeoman service throughout the practising. Keen members attended danger spots at 4 a.m. daily and swept the course before competitors arrived. In case of a fall both man and machine were removed from the fairway almost before they came to rest.

A.C.U. porters to assist in the removal of motor cycles from the boat are much appreciated; their only fault is—their scarcity.

* * *

Anderson quartz plug on Dixon's Indian. The explosion flame can be seen through the quartz top.



Unless J. O. Groves, the private owner Rudge entrant, starts there will be no belt-driven machine in the Senior race.

* * *

Rumour has it that one of the best known Senior riders averaged over 100 m.p.g. in practice, and that he can do the whole course without a refill.

* * *

A most interesting competitor for *The Motor Cycle* trophy was the Sun Vitesse lightweight. A rich mixture is drawn into the crank case *via* a rotary disc valve driven by the crankshaft. In addition air is drawn in through the normal inlet port,

The Indian tool-box consists of a metal case fixed to the loop frame immediately behind the front mudguard.

a control being arranged at this point. A Moss foot-operated three-speed gear is fitted.

* * *

There have been some complaints with regard to the state of the course, which is bumpy in places and loose in others. On the whole, however, it is not bad.

* * *

The Triumph riders have been taking things quietly. Nevertheless, Shemans has been timed from Ramsey to lap in 43m. 30s. (over 52 m.p.h.), and he was not really pushing his mount. On one occasion Sgonina finished a practice spin with a bad dent in his rear rim, but had not the faintest idea where the trouble had occurred.

* * *

The road at Keppel Gate was repaired during the practising period, and the new patch of tarmac made a considerable improvement.

* * *

Clapham (Scott), the Ilkley Club's nomination, and Jackson (Norton) come from the same district, and have a private match on. It is rumoured that they care not who wins the T.T. provided the match is settled to their satisfaction.

In the Rover stable. G. L. White, in the white jersey is one of the reserve riders.

T.T. Notes and News.—

A souvenir booklet, containing the history and results of the T.T. races from 1907 to 1921—the latter to be filled in, of course, on the blank pages provided—is being distributed by the Scott Motor Cycle Co., Ltd. There is a neat touch on the final page, which is devoted to "Personal Particulars." Against the space for insertion of "make of machine," an asterisk indicates the pertinent footnote, "If not Scott, why not?"

* * *

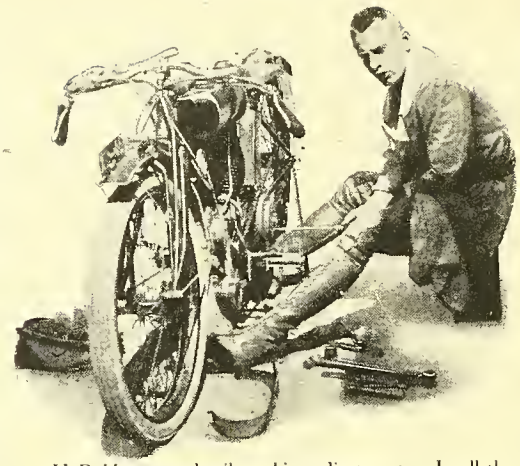
It is claimed that about 80% of the machines in both races are fitted with Brooks saddles. As the saddle becomes quite an important item after 200 miles at 50 m.p.h., this is an excellent testimony to the excellence of the two special models which J. B. Brooks and Co., Ltd., market for racing machines.

* * *

Entrants might, if they so desired, choose and supply their own racing colours. This provision was not very fully taken advantage of; probably the majority had too much to think about otherwise. Those who decided on racing under distinctive colours were as follows:

DOUGLAS.—Blue and white with white sleeves.

INDIAN.—Red.



A.J.S.—Black and gold; gold cuffs, gold diamonds back and front.

EDMUND.—All white.

B.S.A.—Cream and green, vertical half and half.

JAMES.—Brown and gold: gold sleeves.

ERIC WILLIAMS, LTD.—Royal blue and gold.

H. R. Harveyson busily making adjustments. In all the garages both the riders and mechanics have taken the utmost pains with every part of the machines, knowing full well that the final result is often decided by attention or inattention to an insignificant detail

R. CAREY.—Light blue and dark blue (vertical, half and half); crest on pocket.

SUNBEAM.—Black and gold.

* * *

One of the most consistent cornerists is V. Ollson (3½ Sunbeam). Hassall (3½ Norton), on the other hand, gets round much faster, but relies on his brakes a good deal for corner work.

* * *

If all accounts are true, the present-day machines, even those of externally conventional design, have left behind the products of 1914. Even a side-by-side valve 250 c.c. Hobart-Jap was claimed to do practice laps at 47 m.p.h.

The Triumph side-by-side valve machines are badly handicapped by the absence of G. E. Stanley, the state of whose health prevents him taking charge of the new engine.

* * *

Several riders have fitted the new Easting handle-bar screen.

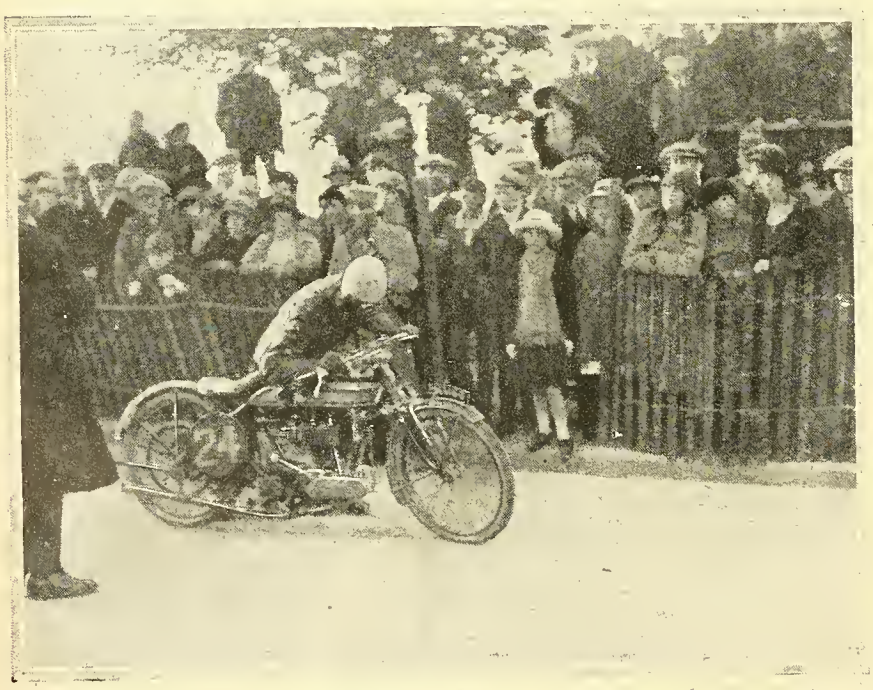
* * *

The 3½ h.p. twin James machines, which, by the way, are the standard type as sold to the public for several years past, seem to have excellent acceleration powers.

* * *

Several of the Nortons have Webb expanding front brakes, and O'Donovan has arranged separate levers so as to obtain both hand and foot gear control. Mitchell, a private entry, has put in much good work on his Norton, and has accomplished some useful lap times.

* * *



The Scott Squirrels are very much fancied; they are very fast, and corner as only Scotts can corner. Incidentally, they are practically the standard sporting mounts as sold to the public.

TIME AND SPEED ON THE T.T. COURSE.

Record lap, George Dance (3½ Sunbeam), 1929. Speed 55.62 m.p.h. Time 40 min. 43 sec.

Last week we mentioned the "little maids from school," whose enthusiasm runs so high. Here they are in the early morning hours, watching their favourites during practising. The Norton rider is H. Hassall.

Some of the best practice times were recorded fully a week before the races. Most of the riders endeavoured to get an idea of their capabilities in one "all out" lap and then conserved their energies. Unfortunately, they often tried to camouflage their true times. The following list is fairly informative, however:

	m. s.	m. s.	m. s.
De la Hay (Sunbeam) ..	44 5		
H. R. Davies (2¾ A.J.S.) ..	43 30	43 35	43 0
D. Brown (Norton)	48 39	46 4	
A. Bennett (Sunbeam) ..	42 35	42 40	
H. Hassall (Norton)	42 13		
H. Le Vack (Indian) ..	42 58	42 40	
J. Whalley (Sunbeam) ..	44 45	45 48	47 38
D. S. Alexander (Norton) ..	47 30	45 53	
F. W. Dixon (Indian) ..	43 15	43 50	41 35

Dixon's last time is equivalent to a speed of 54.5 m.p.h., and is nearing Geo. Dance's record lap made in the race last year of 55.6 m.p.h.

THE AUTO-CYCLE UNION GIVES VALUE FOR MONEY.

isation. It was shown at the annual general meeting of the Auto-Cycle Union that the governing body had worked at a loss during the last financial year, and while we should have liked to have seen a better financial position, it is gratifying to know that the Union spends its income instead of husbanding money which has been collected from riders. The administrative charges of the Auto-Cycle Union are small because so much of the work is honorary, and motor cyclists can realise from the financial statement of the Union that they are getting very good value for their subscription fees. It is the policy of the A.C.U. to spend its income on the movement which it controls. Last year the Tourist Trophy Races were run at a loss, and I daresay a number of other competitions cost the Union money, but that did not stop them from arranging a comprehensive programme for the forthcoming season. The Union just does not exist for profits, and if it piled up a nice little amount as a result of a particularly successful year, well, we could reckon on getting even greater advantages for our annual subscription during the next year. It seems to me that an organisation which lays no claim to a big holding in gilt-edged securities is either an unsuccessful body or else that it spends its income, and if, as in the case of the A.C.U., the latter obtains and the spending is done in the interests of motor cyclists, then we ought to congratulate ourselves on the fact that the balance sheet shows a loss.

Lawrence H. Cade, in "The Clarion."
25-3-21.

Every motor cyclist who is not yet a member should act upon the testimony of this well-known writer and JOIN the Auto-Cycle Union AT ONCE.

SUBSCRIPTION £1 FOR 12 MONTHS.

No Entrance Fee. No Charge for Badge.

Full particulars, and an interesting new booklet from:—

The Secretary, Auto-Cycle Union, 83, Pall Mall, London, S.W.1.

You can buy an Omega-Villiers for £50, an Omega-Jap for £60, an Omega Combination for £90. Write for lists.

OMEGA

And again! Two Omegas entered — usual result — 1st and 2nd places. The Garrowby Hill-climb plants another feather in the Omega cap—1st and 2nd in the 350 c.c. class —100% efficiency once more. These consistent wins cannot fail to convince the discerning motor cyclist of the roadworthiness of Omegas. Everyday riding only emphasises the reliability, power, speed, and all round quality of the omnipotent Omega. It is the Motor Cycle for you, your friends, and their friends. Get to know it.

I.T. Notes and News.—

Styles of cornering differ very widely, and, though many take the easier bends leaning out, almost every rider leans in on the really bad corners. At Quarter Bridge, for instance, there was no single exception to this rule during Friday's practice.

* * *

The practice of putting out a foot when cornering may be said to have disappeared. Only one instance has been noticed during the preliminary laps.

* * *

All Blackburne engined machines have been doing well in practice. To begin with, their riders took the course steadily, but later on lap times improved rapidly.

* * *

Perhaps the Ivy machines are as near to standard as anything on the course. A larger tank is almost the only modification.

* * *

Why should not the tourist be afforded the convenience of foot or handle-bar controlled oil pumps? Practically every machine in the T.T. is fitted with one or other system, and yet 99% of present-day touring machines lack this refinement.

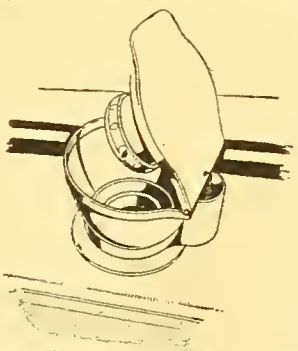
* * *

B.S.A.'s have found some improvement in steering by the substitution of 26×3in. tyres for 650×65 mm. on the front wheel only; while Triumphs have been testing 3in. tyres all round.

* * *

The new T.T. Scotts are very fast, and can corner in true Scott style; the angle at which the machine leans over is terrifying to onlookers. B.S.A.'s also can be tilted to an extraordinary degree, but not quite so much as the Scotts.

F. W. Dixon will be a formidable competitor on his single-cylinder Indian. Very fast lap times have been made by him during practice.



Victor Horsman, the Liverpool Norton rider, who has a splendid record for successes in track events, reliability trials, and the T.T. Liverpool expects him to take home the Trophy.

* * *

Friday's gale made a wonderful difference to the number of spectators, and the grandstand was almost empty. At Quarter Bridge also spectators could have been counted on the fingers.

* * *

A few entrants still had qualifying laps to complete on Friday.

Combined filler cap and funnel designed by S. L. Bailey for the Douglas T.T. machines

* * *

A strong wind down the mountain on Saturday morning caused several riders to overshoot Craig-na-Baa corner. In spite of one or two spills, no serious damage was done.

* * *

Graham Walker's engine had a mysterious accident during Friday night, both valves being hammered inwards at the base. If anyone had been tampering with the machine with a view to putting it out of the race he was disappointed, for Walker was out with the same engine on the following day.

Douglas filled up rapidly towards the end of last week. The approach of the races makes a great difference to the numbers in the town.

* * *

Last week Rovers changed their engines over into new frames, and are very pleased with the results. The new frame is lower, and has improved the team's corner work.

* * *

Isle of Man sheep are by way of being acrobats, but the one that jumped a wall in front of Douglas Alexander will never do it again. This rider had a narrow escape, and travelled nearly seventy-five yards with a buckled rear wheel after the impact.

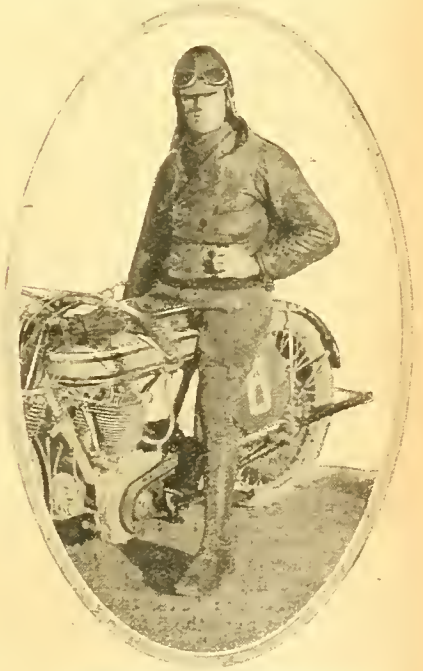
* * *

A very noticeable improvement has been made in riding during the past few days. Several men new to the course are now cornering like old hands.

* * *

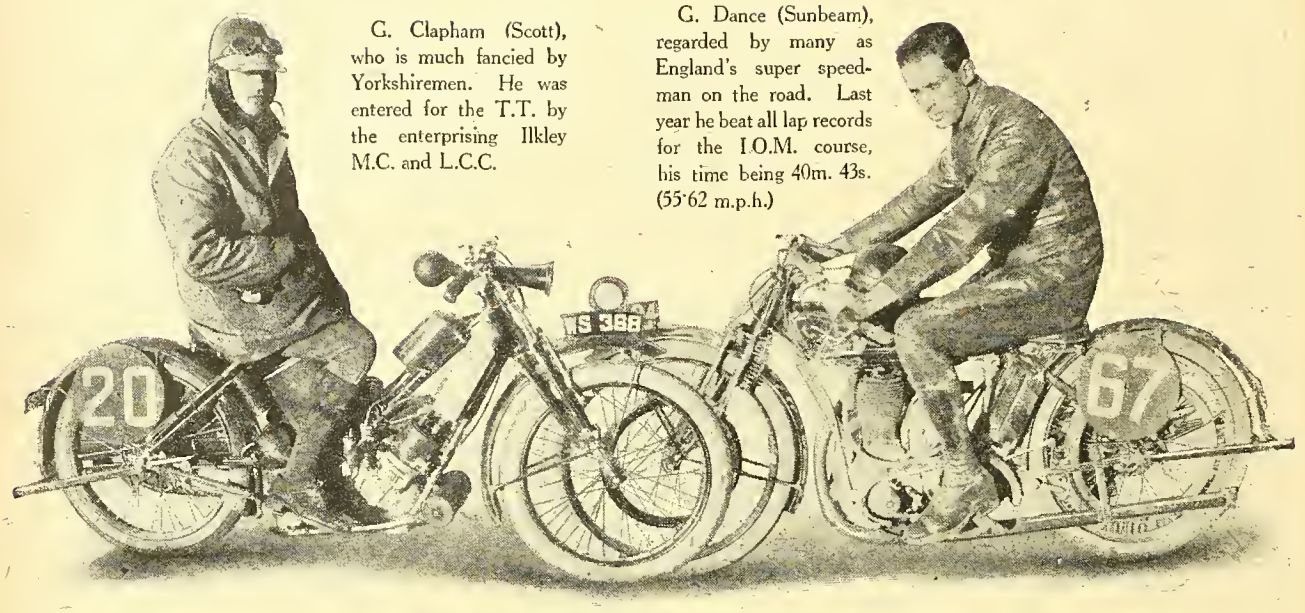
A practice lap of 47m. 4s. is no mean performance for a 250 c.c. engine. Nevertheless, Savage accomplished this feat on a little Hobart on Friday last.

* * *



Dust has troubled the riders very considerably during practice, and the sharp grit and small stones on the mountain roads have been responsible for many tyre troubles.

* * *



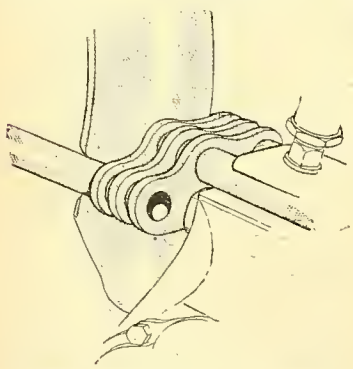
After D. Alexander's accident with a sheep—George Dance brought him into Ramsey (from Sulby) on the tank of his T.T. Sunbeam. Though duly grateful, Alexander feels happier in the more orthodox position!

* * *

Saturday's practice was taken very easily by most of the riders, the great majority of whom have qualified. Some of the A.J.S. men for Tuesday's race, however, were averaging 45m. for the lap.

L. Mitchell (Norton), a daring rider, well known to spectators at Northern hill climbs.

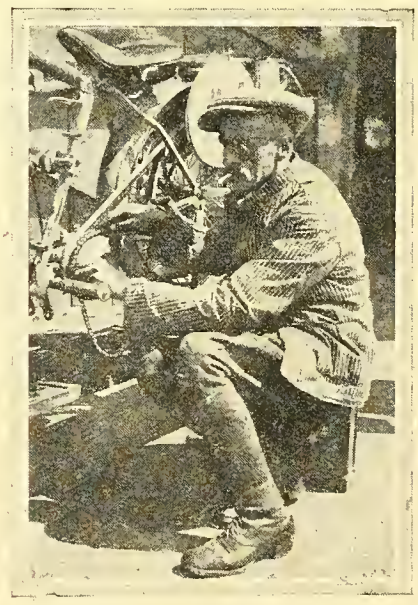
G. Clapham (Scott), who is much fancied by Yorkshiremen. He was entered for the T.T. by the enterprising Ilkley M.C. and L.C.C.



G. Dance (Sunbeam), regarded by many as England's super speed-man on the road. Last year he beat all lap records for the I.O.M. course, his time being 40m. 43s. (55·62 m.p.h.)

CORNERING IN PRACTICE.

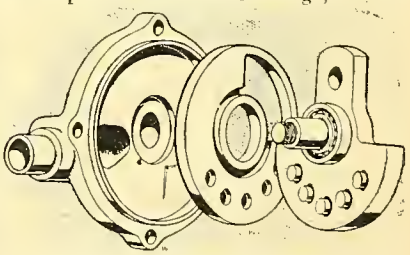
NOTHING deceives the eye more easily than speed corner work. A man who rides quietly and creates no impression of speed may, and probably does, get round quicker than he who crashes up to a bend, puts on his brakes, dry-skids, and disappears in a cloud of dust amidst the cheers of the spectators.



Perhaps the best exponent of the art of cornering in the Isle of Man is George Dance, yet he seldom appears to corner fast, except when he passes with another competitor. His stable mate (and last year's winner), T. C. de la Hay, is rather more showy, but a first-class hand. Bennett, another Sunbeam rider, is also good—in fact, there is hardly a weak spot in the Sunbeam camp.

Amongst the Indian entry, Le Vack and Dixon form a sharp contrast. The former, though he corners fast, gives little impression of speed, while the latter appears even faster than he is!

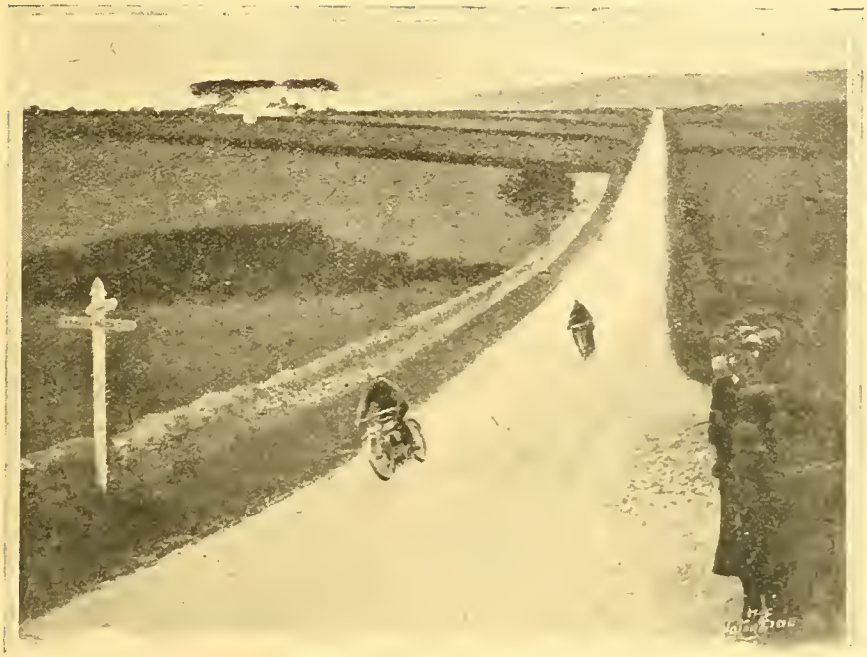
Ingenious steel plate bottom bracket on the T.T. Dot.



Scotts have a method of cornering of their own, for the low centre of gravity permits the machine to be heeled over to apparently impossible angles; but, though they are probably the best machines for cornering in the world, the sharp scream of the engine increases the effect of speed to a considerable degree. As an instance, one morning a Triumph, apparently rather high-geared, came down the mountain towards Hilberry at a very moderate speed, as far as the eye received the impression. It was followed at an interval by a Scott with the high, sharp crackle of a well-tuned trembler coil. The first machine attracted little notice on the bend, but a visible thrill passed through the spectators as the Scott flashed by. Yet the distance between the two was not decreased when the pair passed out of sight towards Signpost Corner.

The "father" of British competition riders. F. W. (Pa) Applebee, the oldest competitor in the races. As last year, his mount in the 250 c.c. class in the Junior race was a Levis, a machine on which he is very much "at home."

H. Hassall is a wonderful rider. He approaches even such corners as Quarter-bridge at a terrific speed, and relies on his brakes to an almost unprecedented degree; yet the marvel of his cornering lies in the fact that, even though the rear wheel be locked suddenly, he does not skid all over the road, but maintains a comparatively even curve throughout.



Dixon, for instance, will take Signpost leaning in on one morning, and on the next day he will whizz round Ballacraine leaning out. This entrant is one of the most versatile riders in the race; he appears to be immensely strong and active, and on one occasion, in the case of a spill at Governor's Bridge, he had picked up the machine and was in the saddle almost before one had realised that he was off.

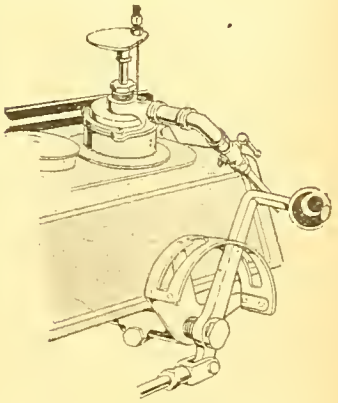
Details of the rotary valve fitted to the Sun-Vitesse two-stroke. (Left) Crank case endplate. (Middle) Disc valve. (Right) Loose end of crank pin. Note the five pegs for driving valve disc.

During the early practice there was a lot of untidy work by newcomers to the course, who almost invariably attempt to get round too fast, and either "pile up" or make a very slow turn in disgraceful style. This sort of thing wears off with practice, and is quickly shown by the improvement in lap times.

The brothers Wood are, perhaps, the finest exponents of the Scott clan, and

A scene at Hilberry corner during practising in the early hours. Two Senior riders about to take the bend after a run down the fast straight stretch.

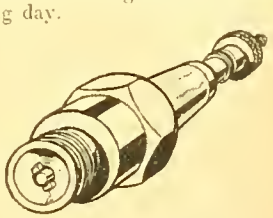
when Tim conducts his team round the course he attracts more attention by his clean cornering than most of the actual competitors. Clapham is new to the course, and yet on his second lap he took Hilberry at a speed which can seldom have been bettered and with never a flicker of the wheel track.



B.S.A.'s were largely designed for corner work, and, though not quite perfect, they more than make up in acceleration the little they lose in steering. Such old hands as Duggie Brown, the Alexanders, Noel Brown, Ollson, Horsman, and others of that ilk seldom make a mistake, though they are not often singled out by the unlearned spectator as star performers.

THE FINAL DAY'S PRACTICE.

MONDAY morning, the last day's practising, revealed nothing of particular interest. Most of the riders simply toured round the course. Stanfield (Scott) fell, and although his machine was wrecked he was little hurt.



The weather was fine, but there were slight showers on the mountain road. Best laps were made by:

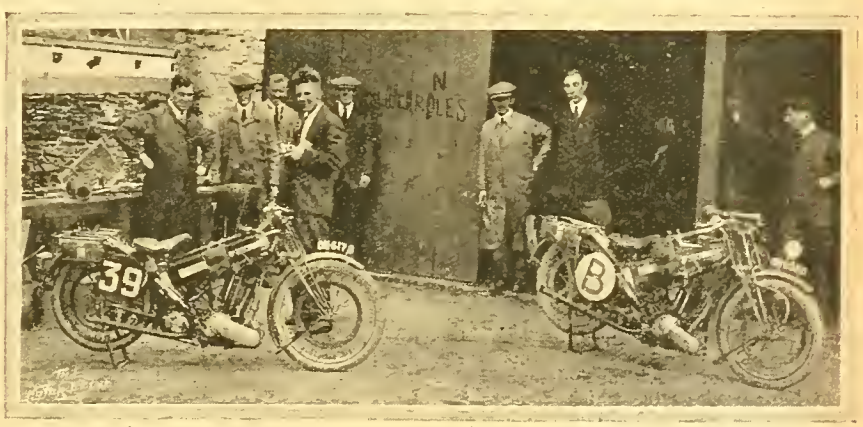
	m.	s.
De la Hay (Sunbeam)	43	45
L. Mitchell (Norton)	43	20

Gate quadrant for three-speed lightweight Burman gear box, and h.b. controlled oil pump on Massey-Arran.

The roads were much improved by the recent rain, and if the weather holds will be in excellent condition for both races. On Monday the Junior competitors handed in their machines for sealing in readiness for the great contest on the following day.

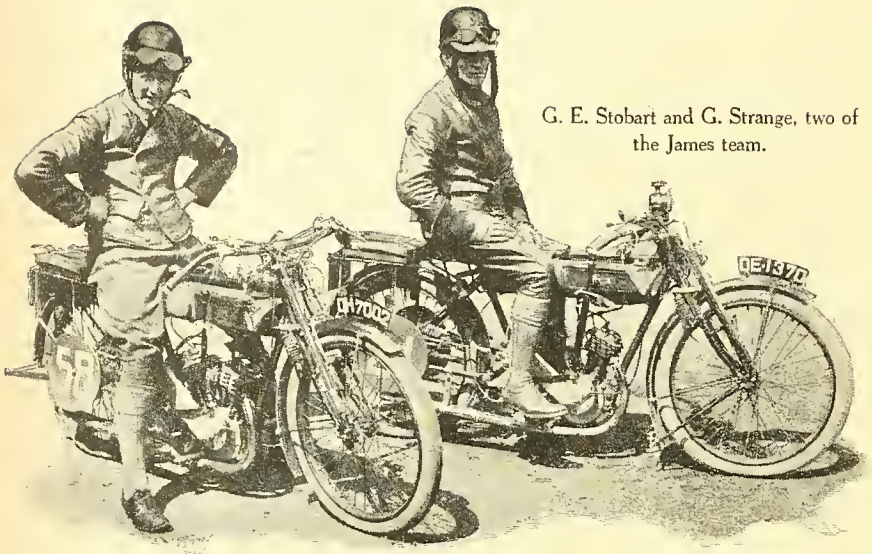
A Sphinx plug with copper wire electrode and corrugated internal insulation to prevent shorting by carbon deposit.

SUMMARY OF THE PRACTISING.



Impressions on the Eve of the Races. Senior Riders' "Form."

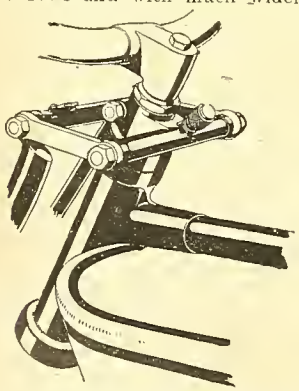
THAT there are rosy chances of anyone winning, and a feeling that it is anybody's race until the winner actually crosses the finishing line, is the impression gleaned as a result of an eleventh hour run round the depots at the beginning of this week.



This tour proved distinctly interesting, for one saw competitors putting final touches to their machines, many of them quietly confident of success.

The fact that the motor cycle industry is so strongly represented this year, lends added importance to the race. Certainly no expense is being spared by the army of trade representatives in the Island in looking after the interests of the riders, their machines, and particularly their equipments. Depots are established at Ramsey, Peel, and Douglas, and, at these, riders and mechanics are busy with the final overhaul of their mounts.

Trouble has not been entirely absent. For instance, aluminium pistons have proved a source of worry, and new ones of different alloy have in some cases eased the riders' minds, particularly of those who use 4¼ to 1 gears. Most of the machines are fitted with tanks which are capable of holding over three gallons of



Men and machines at the B.S.A. depot. The striking design of the B.S.A.'s for the T.T. has caused comment wherever seen.

G. E. Stobart and G. Strange, two of the James team.

petrol and a gallon of oil. The use of such a tank will entail only one stop for replenishments.

The Triumph camp is in two sections—one concerned with the side-by-side valve machines, and the other with the now famous "hush-hush" Ricardo engined mounts. The latter type is faster; but the whole camp impresses one by its quiet confidence. All the Triumph riders are well content with the workmanlike two-speed gears, particularly with their behaviour on the mountain road. It is interesting to note that whereas the side valve machines have a hand-operated change-speed gear, the four-valve Triumphs have foot control for the change-speed mechanism. We observed that Druid forks had been fitted, and that the tyres also had been changed for the race. Most of these machines have new Dunlop flat base rims with staggered spokes, set in two rows and with much wider hubs

The new Norton head lug embodies extra large ball races, a single head clip with central handle-bar fixing, and a single greaser for the rear fork spindle.

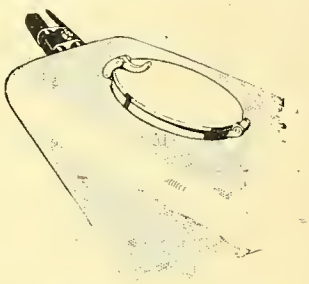
than usual. Three-inch Dunlop Magnums are fitted on the rear wheels of the side valve model.

The Scotts, of which much is expected, have four-speed gears, which appears to give them a great advantage, and their corner work and acceleration is an "eye opener." Geoffrey Clapham and Clarence Wood are undoubtedly favourites amongst the Scott team. Incidentally, Wood is actually using 700×80 mm. Palmer tyres on the rear wheel.

In all the Ramsey camps, however, one hears much about the wonderful speed of the Indians, and particularly of Dixon's three whirlwind laps, which he got in during the morning's practice—an exceptional achievement during the limited time available.

Dark Horses?

At Peel we saw the O.H.V. Martin-M.A.G. undergoing its final test for fitness. These machines are sure to do well.

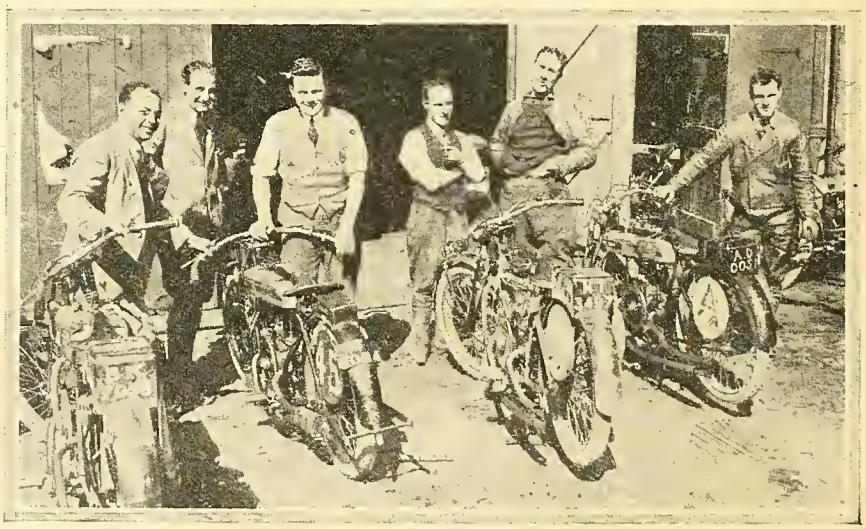


Excepting Eric Longden's Coulson-Jap, the James machines are the only other make in the Senior race with V twin engines. Strange, Lidstone, and Stobart, the James team, are all seasoned riders, and their consistently fast but steady lapping should put them well in the running for the team prize. Their mounts, too, appear to possess excellent accelerative powers.

Douglas claims the biggest percentage of competitors, for Nortons, Douglases, Sunbeams, Indians, and Rovers are quartered there. Amongst most of the riders the feeling prevails that the published practice times are no criterion, and that much bluffing as to speeds has occurred. Some riders have been in the habit of stopping on the course two or three times, and then continuing. All this indicates that several dark horses, of 80 m.p.h. calibre, exist, and records are practically sure to be broken.

If the day is fine, Hassall and "Duggie" Brown (Nortons) will be the most favoured men, but Sunbeam enthusiasts point to de la Hay, George Dance, Reg. Brown, and Eric Williams, and ask how can these be beaten.

The Indians' seasoned riders such as Le Vack, Harveyson, and Dixon, whose speeds have undoubtedly improved each day, have created a splendid last minute impression, whereby everybody's calculations have been upset.



Thus, with such a representative and magnificent lot of riders, it is clear that the race is very open, and a win by any-

An enormous filler cap occupies the front end of the Scott tank.

one of ten men would occasion no surprise to experienced judges who have followed the practice form throughout.

Incidentally, Mr. Alec Ross soon got busy with his annual fund in aid of the Douglas hospitals, and at the beginning of the week already counted upon raising at least £100.

Smiles at the Douglas Garage. S. L. Bailey, on the extreme left, is pleased with the work that the "boys" have accomplished during the practising.

The Junior Tourist Trophy Race

AT CRAIG-NA-BAA CORNER

Eric Williams, on a 2¾ h.p. A.J.S., wins the Junior Tourist Trophy at 52 m.p.h.; H. R. Davies (2¾ h.p. A.J.S.) second; T. M. Sheard (2¾ h.p. A.J.S.) third. 2¼ h.p. New Imperial-Jap Four-stroke, ridden by D. G. Prentice, gains "The Motor Cycle" Cup. A.J.S. Riders awarded the Team Prize.

LAP AND TOTAL DISTANCE RECORDS BEATEN.

TUESDAY'S race for the Junior Tourist Trophy was strenuously fought out, and, as was expected, record speeds were attained. But for mist on Snaefell, the weather was ideal and the organisation excellent. A sweeping success was scored by the single-cylinder overhead-valved A.J.S. machines, which occupied first four places at the finish. Eric Williams, who won in 1914, again achieved victory, averaging 52 m.p.h., actually a greater speed than was made by the winner of last year's Senior race. Bad luck robbed James Whalley (who rode a Massey-Arran with a Blackburne engine, instead of Oates) of the leading position during the last few miles of a most strenuous race.

Successful Overhead Valve Engines.

The mountain stretch is always fraught with possibilities; this year was no exception.

Though A.J.S. machines were expected to win, no one anticipated such a runaway victory. Whalley's ill-fortune, which dropped him to fifth place, was a matter of general regret, for his handling of his machine was admirable. Douglases were confidently expected to give the A.J.S. men a close race, but they failed to live up to expectations.

The 1921 Junior Race in a Nutshell.

Starters—Sixty-five.

Completed the course—Thirty-eight.

Winner:

Eric Williams (2¾ A.J.S.)
3h. 37m. 23s. Average speed 52 m.p.h.

Second:

H. R. Davies (2¾ A.J.S.)
3h. 41m. 10s.

Third:

T. M. Sheard (2¾ A.J.S.)
3h. 41m. 19s.

250 c.c. class for "The Motor Cycle" Cup.

D. G. Prentice (2¼ New Imperial-Jap)
4h. 12m. 37s. Speed 44.9 m.p.h.

Fastest Lap.

H. R. Davies (2¾ A.J.S.)

Club Team Prize.—Wo cester.

Overhead valves were used by the first six riders. The J.A.P. engine on Howarth's Dot, which finished seventh, had side-by-side valves. Prentice on the 250 c.c. New Imperial-Jap was tenth, winning *The Motor Cycle* Cup at a speed of 45 m.p.h. To the Levis belongs the honour of the first two-stroke home; Davison was twelfth in the general classification.

Thirty-eight of the sixty-five starters finished the race.

Off!

Alfred H. Alexander (2¾ Douglas), who was enthusiastically cheered, probably made the best and speediest start, the distinctive note of his exhaust varying as he changed up through his four gears. The ovation accorded "Pa" Applebee (2¼ Levis), however, was even more vigorous.

It soon became patent to all that the race was going to be the fastest of any Junior event. Senior speeds were being attained by the speediest men, so there was a certain amount of overtaking even in the first two or three miles. Within the first seven miles Fairweather (Blackburne) quickly passed three of the 250 c.c. machines — Edwards (2¼ Levis), Savage (2¼ Hobart), and one of the Ivys.

The Junior Tourist Trophy Race.—

Alexander (Douglas), Davies (A.J.S.), and Harris (A.J.S.) also overhauled three or four riders before Ballacraine. Brown (New Scale), the first man away, succeeded in retaining his position, but on the next lap was caught by Fairweather before reaching Ballacraine.

At Ramsey different styles of cornering were witnessed. Even on the first lap Miller (Martin) took the hairpin in a very wide sweep. Whalley's cornering appeared clumsy at first sight, but he got round at good speed; this also applies to his performance at the other corners, where he invariably used his feet to steady himself. Several times there was considerable excitement on the Snaefell bends, when two or three competitors arrived in a bunch, but sportsmanship prevailed, and the men considered one another. Lord (Hobart), Newman (Ivy), and Young (Blackburne) formed one group at the hairpin, but the last-named got ahead by superior acceleration. Norris (Sun-Vitesse) got into the gutter, but made a good recovery. The magnificent riding of Davies was wonderful to watch on such corners as the Ramsey hairpin.

In the meantime, Whalley (Massey-Arran) was creeping up, and indicating that a win by a dark horse was not improbable. Harris and Davies were steadily gaining long before Ramsey was reached. At Craig-na-baa, Whalley had so increased his lead that it was apparent that all previous Junior records would be beaten, but all the A.J.S. machines were hot on his track, and were overtaking as many as a dozen men who had started before them. It occasioned no surprise, therefore, when it was known that Davies had made best time at a speed of 54.6 m.p.h. for the first lap, with his colleagues second, fourth, fifth, and sixth. Davies was only 46s. slower than Dance's record lap in the Senior race last year.

ERIC WILLIAMS, THE WINNER ON A 2¾ H.P. A.J.S.

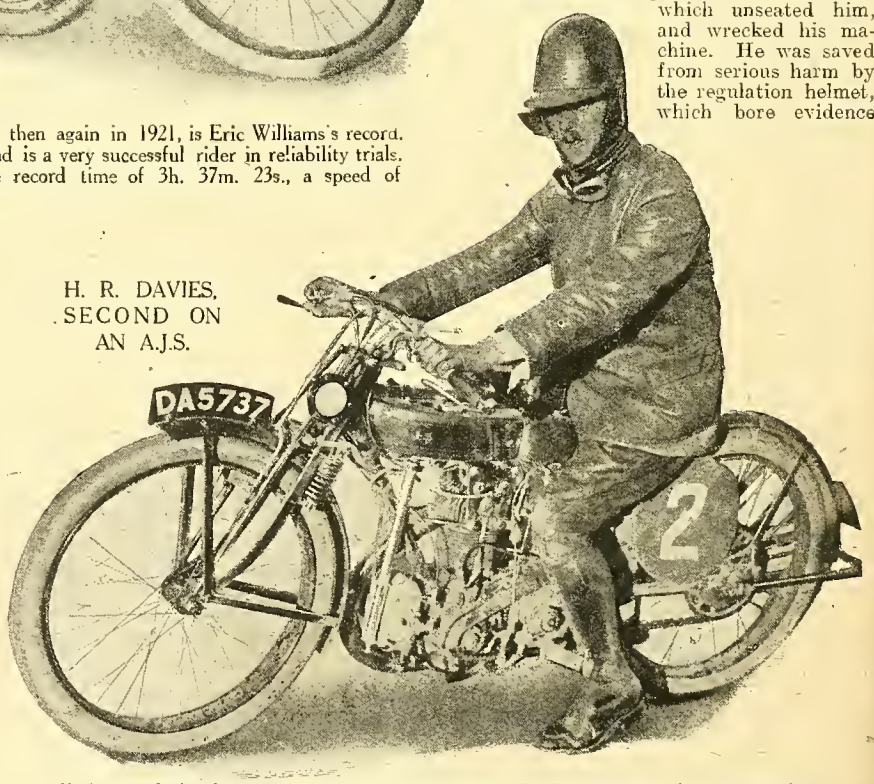
Junior Tourist Trophy.

To win a hotly-contested race in 1914, and then again in 1921, is Eric Williams's record. Incidentally, he won the D.C.M. in 1914, and is a very successful rider in reliability trials. He won the Junior race on Tuesday in the record time of 3h. 37m. 23s., a speed of 52 m.p.h.

First Lap Times.

		m.	s.
1.	H. R. Davies (2¾ A.J.S.)	41	29
2.	H. F. Harris (2¾ A.J.S.)	42	19
3.	J. Whalley (2¾ Massey-Arran)	42	47
4.	G. Kelly (2¾ A.J.S.)	43	53
	E. Williams (2¾ A.J.S.)	44	0
	T. M. Sheard (2¾ A.J.S.)	44	15
	C. W. Fairweather (2¾ Blackburne)	45	55
	O. Wade (2¾ A.J.S.)	46	12
	R. Lucas (2¾ Coulson)	46	20
	D. Young (2¾ Blackburne)	46	34
	A. H. Alexander (2¾ Douglas)	46	35
	H. Thorpe (2¾ Douglas)	46	36

Sulby Bridge provided the usual quota of thrills. Savage (Hobart) was among those who, approaching it too fast and dry skidding, fell, narrowly escaping being run over by two A.J.S. riders following close on his heels.



Albert Milner (Levis) was unfortunate. His number was 13, and on the first lap he sheared a sprocket key, and retired.

Brockbank (Brock-Blackburne) seized his engine at Governor's Bridge, and pushed his machine to his depot to retire. One of the cylinders of A. Alexander's Douglas was misfiring when passing the grandstand at the end of the first lap. Shortly after Ballig Bridge he ran on to the grass, and hit a stone, which unseated him, and wrecked his machine. He was saved from serious harm by the regulation helmet, which bore evidence

T. M. Sheard has ridden in every T.T. race since 1913. On Tuesday he was third on an A.J.S.

H. R. DAVIES, SECOND ON AN A.J.S.

If the race had only been six laps instead of five, H. R. Davies might have regained the leading position. As it was, he led in the first lap, was unplaced in the intervening circuits, but finished second, and only 3m. 47s. behind the winner.

The Junior Tourist Trophy Race—

of how he had fallen, and skidded along the ground on his head. His brother, J. R., on a sister mount, arrived at the depot with a broken rocker, and retired. However, he reconsidered his decision after replacing the broken part.

The weather, which had promised well at the start, became overcast, and on the mountain mist so bad was it that it was impossible to see 100 yards ahead. This naturally slowed competitors somewhat. Notwithstanding this, A.J.S. machines managed to come within a minute of their first lap times; in fact, Kelly was only 4s. slower, and Harris actually 5s. than their first laps.

The riders were now steadying down to a hard race, and took bends and bridges with greater care. Some evidence of the strain upon tyres and brakes imposed by the race was present in the very noticeable smell of burning rubber after each bunch of competitors had negotiated the sharper bends.

Cautious Covering.

After Craig-na-baa the cornering was not particularly spectacular. Riders approached cautiously, and accelerated immediately. Of a bunch of six riders who came round together, Prentice (New Imperial-Jap), winner of *The Motor Cycle* Cup, made easily the best performance. As was suggested might be the case by the fast times for the first lap, mechanical troubles became more prevalent on the second circuit. Horton, who had completed a circuit in 46m. 40s. on his 250 c.c. New Imperial-Jap, Eve (Martin), and J. Weatherell (R.W. Scout), dropped out through various causes at Sulby Bridge. The front brake of Olsson's A.J.S. came adrift, and he was thrown, fortunately without injury.

Second Lap Times.

		h.	m.	s.
1.	H. F. Harris (2¾ A.J.S.)	1	24	33
2.	J. Whalley (2¾ Massey-Arran)	1	25	35
3.	E. Williams (2¾ A.J.S.)	1	27	38
4.	G. Kelly (2¾ A.J.S.)	1	27	50
	T. M. Sheard (2¾ A.J.S.)	1	29	23
	C. W. Fairweather (2¾ Blackburne)	1	32	4
	O. Wade (2¾ A.J.S.)	1	32	36
	L. Horton (New Imperial-Jap)	1	33	0
	D. Young (2¾ Blackburne)	1	33	21
	J. Emerson (2¾ Douglas)	1	35	6
	H. R. Davies (2¾ A.J.S.)	1	35	35
	R. Carey (2¾ Blackburne)	1	37	25

Davies passed the grandstand on his third lap after some delay, though his engine had the same healthy crackle. It subsequently transpired that his front tyre had punctured, which dropped him back to the eleventh position. The leader, Harris, too, suffered delay, letting Whalley into first place. There was a buzz of excitement at this unexpected development.

The Alexanders' luck was certainly out, for "Duggie," on a twin Coulson, ran out of petrol at Craig-na-baa, and had to retire. Fairweather, who had been doing so well on his Blackburne, fell on the mountain during his third lap, but was not seriously hurt. After resting at the Bungalow he continued. Craig-na-baa and Hilberry Corner were favourite vantage points, and two successful methods of cornering were adopted. Some kept on the outside of the road till close to the Corner, then cut across close in; others cut in earlier. At Hilberry there is a bad bump, which lifted some riders out of the saddle. Harrison (Velocette) was extraordinarily neat; he did not cut out, but kept close to the Corner, maintaining high speed throughout. Humphreys, on a similar machine, was as good. Davies kept close in, and left the saddle on hitting the bump; nevertheless, he appeared fastest.

In the 250 c.c. race for *The Motor Cycle* Cup, the little J.A.P. four-strokes were going great guns, notably Prentice's New Imperial, which lapped in 49m. 40s.; Black's Omega, 49m. 53s.; and Boulton's New Imperial, 50m. 41s. Prentice actually enjoyed a non-stop run; and the two-strokes, at first, seemed quite out of it for speed, although Davison (Levis) and Harrison (Velocette) were running very consistently, whilst the Ivy machines always created good impressions as they sped past the stand.

Third Lap Times.

		h.	m.	s.
1.	J. Whalley (2¾ Massey-Arran)	2	11	16
2.	E. Williams (2¾ A.J.S.)	2	11	58
3.	T. M. Sheard (2¾ A.J.S.)	2	14	11
4.	G. Kelly (2¾ A.J.S.)	2	15	15
	H. R. Davies (2¾ A.J.S.)	2	17	55
	O. Wade (2¾ A.J.S.)	2	22	8
	D. Young (2¾ Blackburne)	2	23	18
	R. Carey (2¾ Blackburne)	2	27	10
	W. Howarth (2¾ Dot)	2	28	38
	D. G. Prentice (2¼ New Imperial-Jap)	2	30	35
	S. A. Newman (3 Ivy)	2	40	51
	D. S. Davison (2¼ Levis)	2	32	17

The telephone announced that Pugh had retired with a broken magneto spindle. Magnificent riding gave Davies the fifth position at the end of the third lap, so he was still to be reckoned with. Wade, Young, and Carey came next in order. Prentice had climbed to tenth position, and Davison (Levis) to twelfth.

With so many A.J.S. men as runners-up, it was clear that any untoward happening to Whalley would ensure another Wolverhampton victory. The slow Douglas laps robbed the event of much interest; their 2¾ h.p. engines in 3½ h.p. frames made a total weight of over 280 lb., a distinct handicap.

Booming of engines and the strains of a string band at the stand formed strange mixtures. A lap in 42m. 51s. gave Williams (A.J.S.) the lead at the end of four laps, with 68s. advantage over Whalley's Massey-Arran.

Fourth Lap Times.

		h.	m.	s.
1.	E. Williams (2¾ A.J.S.)	2	54	49
2.	J. Whalley (2¾ Massey-Arran)	2	55	57
3.	T. M. Sheard (2¾ A.J.S.)	2	57	31
4.	H. R. Davies (2¾ A.J.S.)	3	0	6
	G. Kelly (2¾ A.J.S.)	3	1	46
	O. Wade (2¾ A.J.S.)	3	10	6
	D. Young (2¾ Blackburne)	3	10	8
	W. Howarth (2¾ Dot)	3	16	2
	R. Carey (2¾ Blackburne)	3	19	36
	D. G. Prentice (2¼ New Imperial-Jap)	3	20	25
	S. A. Newman (3 Ivy)	3	20	56
	G. S. Davison (2¼ Levis)	3	22	52

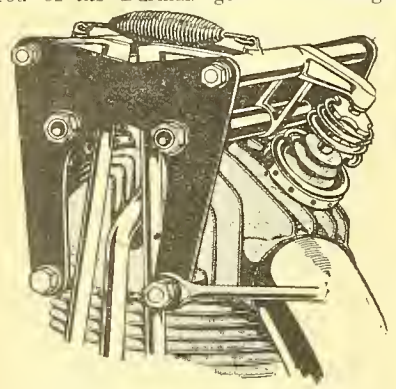
D. G. Prentice, on the 2¼ h.p. New Imperial-Jap, with which he won *The Motor Cycle* Cup, thus securing this honour, which was gained last year by a two-stroke, for a four-stroke. His time was 4h. 12m. 37s

G. S. Davison (2¼ Levis) was second in the keenly contested 250 c.c. class. Last year a Levis won *The Motor Cycle* Cup.

Williams stopped for replenishments rather than risk another lap, and was told he was among the first three. Having speed in hand, he whisked off again in less than a minute. Davies and Kelly also changed places, but Wade and Young, riding very consistently, maintained their positions.

The spectators eagerly followed their times, recorded on the score-board, for their starting order was maintained right round to Craig-na-baa, when No. 23 was signalled. At that point, it seemed that Whalley might prove the winner by a few seconds, but his supporters were crestfallen as the precious minutes rolled by with no signs of the Massey-Arran rider. Cinema men formed a line to record his achievement.

Whalley's Hard Luck.



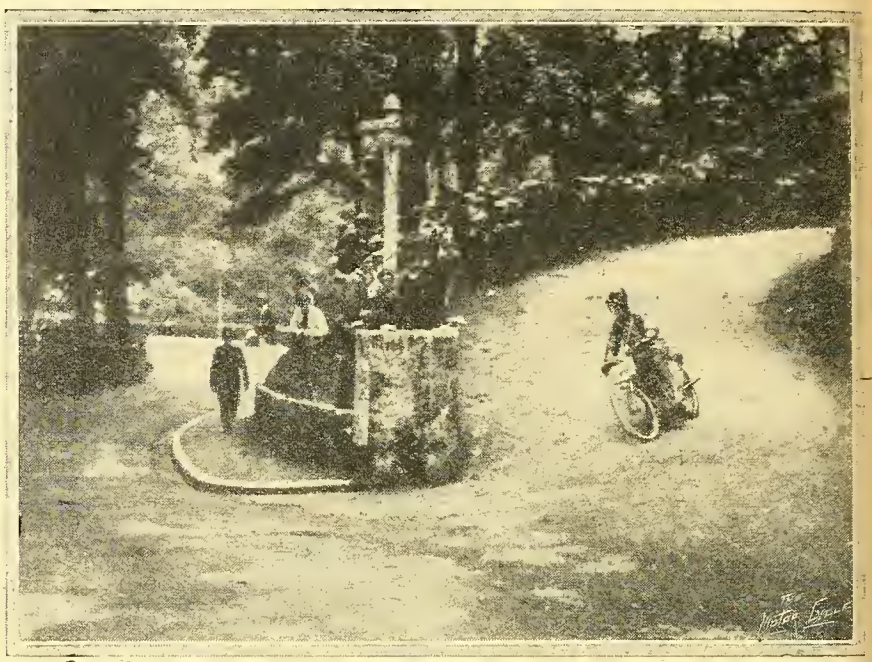
Whalley had to finish over 14½m. ahead of Williams. As the latter carried No. 52, watches were consulted, but it was soon clear something had happened, for, instead of Whalley appearing round the corner from Governor's Bridge, Williams dashed along a winner, and Whalley was not even in sight. When he did appear, it was evident that he was in trouble, for he cruised slowly round the bend with his rear tyre off the rim and steering an unsteady course. He told us his tyre had suddenly deflated at Windy Corner, five and a half miles from the finish, which unfortunate incident robbed him of a place among the first three.

Notwithstanding, he finished fifth, after a most plucky ride, and received a magnificent ovation.

The Junior Tourist Trophy Race.—

The Massey-Arran ran with clocklike regularity until the misfortune, the overhead valve Blackburne engine proving as healthy on its last circuit as at the start.

When Whalley fell the change-speed rod of his Burman gear was damaged



A.J.S. overhead valve gear, showing cooling ribs on head and valve guides.

and his exhaust pipe knocked adrift. Pulling himself together, his nose bleeding profusely as the result of his fall, he remounted, but found his middle gear only operative, so he had a treble handicap. Supporting the exhaust pipe, and with a flat tyre, his progress was slow and difficult to the finish.

Final Positions and Times.

		h.	m.	s.
1.	E. Williams (2¾ A.J.S.)	3	37	23
2.	H. R. Davies (2¾ A.J.S.)	3	41	10
3.	T. M. Sheard (2¾ A.J.S.)	3	41	19
4.	G. Kelly (2¾ A.J.S.)	3	49	22
	J. Whalley (2¾ Massey-Arran)	3	52	39
	O. Wade (2¾ A.J.S.)	3	59	2
	W. Howarth (2¾ Dot)	4	5	14
	H. F. Harris (2¾ A.J.S.)	4	9	0
	R. Carey (2¾ Blackburne)	4	12	14
	D. G. Prentice (2¼ New Imperial-Jap)	4	12	37
	G. S. Davison (2¼ Levis)	4	15	26
	W. G. Harrison (2¼ Velocette)	4	22	33
	F. W. Appleby (2¼ Levis)	4	29	7
	R. Humphreys (2¼ Velocette)	4	31	14
	E. A. Jacob (2¾ Coulson)	4	35	36
	S. A. Newman (3 Ivy)	4	39	28
	A. G. Miller (2¾ Martin)	4	39	59
	W. J. Lord (2¼ Hobart)	4	40	51
	G. Browne (2¾ New Scale)	4	42	4
	J. Emerson (2¾ Douglas)	4	42	43
	G. Denley (2¼ Velocette)	4	44	33
	N. Black (2¼ Omega)	4	48	41
	— Green	4	48	54
	S. F. Haden (2¼ New Comet)	4	50	39
	J. Holroyd (2¾ Massey-Arran)	4	52	19
	A. Jones (3 Ivy)	4	52	34
	G. Kelly (2¾ A.J.S.)	4	57	10
	G. N. Morris (3 Ivy)	4	58	33
	B. Bishop (2¾ Sun-Vitesse)	5	2	49
	J. Joynson (2¾ N.U.T.)	5	3	48
	A. Edwards (3 Levis)	5	8	48
	H. Petty (2¾ Coulson)	5	14	48
	C. Edwards (3 Ivy)	3	15	18
	F. Longman (2¾ Wooler)	5	29	29
	L. Vicary (3 Ivy)	5	30	58
	H. Martin (2 Martin)	5	38	40
	J. R. Alexander (2¾ Douglas)	5	57	54
	G. Jones (2¼ New Hudson)	5	58	2

Although this corner at Governor's Bridge slows even the most daring rider, H. R. Davies (A.J.S.) is not allowing the spectators very much time to admire his excellent corner work!

Another two-stroke was third amongst the "two-fifties." W. G. Harrison (2¼ Velocette) incidentally was a private entrant.

British Pluck.

Such a disappointing termination to a glorious ride has seldom been witnessed, and it seems to be one which qualifies him for the Nisbet award for pluck and endurance. Although, on the other hand, Jones (New Hudson), who was pitched into the river at Sulby, also qualified. He pluckily straightened out his forks, and against the doctor's orders proceeded to finish with the frame badly out of line.

So ended a most strenuous contest.

No trade team qualified for the team prize, but the club prize was won by the Worcester Club. Curiously enough, the Wolverhampton Club had nominated the same team, but the Worcester nomination was first received. The riders were Harris, Williams, and Davies, who all rode A.J.S. machines.

A CHAT WITH THE WINNER.

DURING a chat with the winner just after the race, Eric Williams, whose second win was extremely popular, said that his A.J.S. gave no trouble throughout, and that for three laps he ran on threequarter throttle, opening out for the last two laps. On the third and fourth laps he was considerably hampered by mist on the mountain road. Though he was told he was in the first three he was not aware that he was leading. He confessed that he ought not to have ridden, for, although only twenty-seven years of age, he suffers from rheumatism, and was in bed all Sunday. He rode with his arms swathed in Thermogene and felt very stiff, but finished his remarkable race at over 52 m.p.h. in fresh condition.

Williams fancied Davies as winner, though he regarded Whalley as a dark horse, and only on the previous day was greatly impressed by this rider's practice form.

Williams and Whalley.

Williams overtook Whalley near Signpost Corner on the very last lap. Supplies were taken aboard at the end of the second and fourth laps, but the later replenishment was only a precautionary measure. He saw Alexander's machine by the roadside, and could only wonder as to his fate. The winning A.J.S. had three ratios, viz., 4⅞, 5½, and 8¼ to 1. He was agreeably surprised when he learned of his high average, and was of opinion that very few of the Senior riders will beat it on Thursday. Incidentally, he confidently expected Davies's "2¾" to be in the first six.

Williams's progress in the race is interesting. Fifth in the first round, he was third in the next lap, second at the end of the third lap, and led for the last two laps, winning by 3m. 37s.

Questioned by *The Motor Cycle* regarding the possibility of the 2¾ h.p. A.J.S. being marketed, Mr. G. Stevens replied that the machine had proved so reliable both prior to and during the race that it was highly probable the firm would decide to market such a mount. A definite announcement might be expected shortly, and a decision in favour of such policy will be appreciated by all A.J.S. admirers.

CURRENT CHAT

Times to Light Lamps.

June 16th	... ...	9.46 p.m.

Continental Show.

At the recent Prague exhibition motor cycles were exhibited by ten firms.

Attempts at Track Records.

On Saturday George Baker, on his 80 m.p.h. 2¾ h.p. A.J.S., will attempt to lower the track records at Herne Hill during the cycle race meeting of the Kentish Harriers.

Obituary.

We regret to announce the death, as the result of a motor accident, of Dr. John Downie, the president of the Wakefield M.C.C., and one of the founder members of the Bradford M.C. and L.C.C.

The Five Hundred Mile Race.

Entries for the 500-mile race on July 2nd for the Miller Gold Cup, cease next Wednesday, the 22nd. The address of the secretary of the B.M.C.R.C. is Mr. T. W. Loughborough, The Mill House, Warlingham, Surrey.

An Ingenious Fraud.

Representing that he is a Zenith test rider who has broken down and is short of money, a man has been stopping motorists in the neighbourhood of Birmingham and Worcester, and obtaining small "loans." Zenith Motors, Ltd., write warning our readers of the activities of this individual.

Entries for the Belgian Grand Prix.

Up to the present seventeen entries have been received for the Belgian Grand Prix, including three Nortons, four Saroleas, one Rudge, four Triumphs, a James, four B.S.A.'s, and a Sun. Of the Nortons, Graham Walker is riding one, and is so far the only English entry appearing in the list.

Yorkshire Club's Enterprise.

After setting an example to the motor cycle clubs of the country by entering one of their members for the Tourist Trophy Race, the Ilkley M.C. and L.C.C. has followed this up by nominating another member, Leslie Runton, for the Grand Prix. An enthusiastic rider, Leslie Runton is making a good recovery from his accident in the Harrogate Club's recent hill-climb at Otley.

T. T.
THE SENIOR RACE

Next Thursday's issue of

THE MOTOR CYCLE

Will contain a fully illustrated description of the Senior T.T. race, and further impressions and illustrations of the Junior event.

Where do Stolen Machines go to?

A Bristol reader (Mr. A. Sutcliffe) sends us cuttings and a photograph from the *Bristol Times and Mirror* describing and showing a huge batch of alleged stolen machines now resting at his local police station. He asks, "What protection is the new licensing scheme if such wholesale thefts can take place?"

Police Activity in Cheshire.

Surely the limit in persecution for trivial offences was reached when a Manchester reader was stopped by the police on the Wilmslow Road, Cheshire, for having *one shoe* missing on his front brake! Incidentally, the missing shoe in this case was known to have been in place eight miles previously. Evidently motor cyclists must ride with caution in this neighbourhood.

Facsimile of the ticket of admittance to the grandstand seats reserved by *The Motor Cycle* for the Grand Prix Race on July 24-6. Only a few remain, and those desirous of securing one should make application at once to the Editor. The price is ten francs.

Special Features.

THE JUNIOR T.T. RACE.
HOLIDAY TOURING—WHERE TO GO.

Freak Hill in the I.O.M.

Another freak hill has been discovered by *The Motor Cycle*. It is in the Isle of Man, in the neighbourhood of Laxey, and is in the nature of a staircase—about the same width, but nearly six hundred yards long! It has already been climbed, though the successful rider stuck with the crank case on the ground, and had to dismount in order to lift his machine over the hump.

Found.

Mr. E. Sidwell, of Alton Hall, Allesley, Coventry, on a recent Saturday picked up a pair of overall leggings on the road between Coventry and Allesley. The owner should communicate direct.

A reader reports finding a leather-bound case about five hundred yards from the Abingdon-Oxford cross roads, near Cumnor Hill, on Wednesday, the 25th ult. It was handed in at the Oxford Police Station.

The Future of the Paris-Nice Trial.

In view of the success of this year's Paris-Nice Trial, the Moto Cycle Club de France and its president, M. Hamon, have decided to extend the competition, and to run it on more ambitious lines. Next year it will be supplemented by a tour round France, divided up into fairly long sections to be covered at a good speed, while the competing machines will be exhibited in the various large towns visited. The Tour de France (as the event will be called) will probably take place from April 15th to May 10th, 1922, and these dates are being submitted for acceptance to the Union Motocycliste de France.

Reliability Trials in South Africa.

The course used by the Rand M.C.C. for its recent reliability trial started from a place called Baragwanath, a name not unknown to racing motor cyclists in this country. From this place competitors went to Potschefstroom and back to the starting point—a distance of about 120 miles.

The following competitors were successful: Arthur Hildebrandt (Hilda), D. A. Scott (A.J.S.), A. Long (Coulson B), P. Flook (Norton), J. R. Berry (Triumph), P. L. Evans (Coulson-B), C. D. Wulkswinkel (Harley-Davidson), P. Leishars (Excelsior), A. Langerhuis (Harley-Davidson), and E. Simon (Coulson-B).

Imports and Exports.

Owing no doubt to the clouded industrial outlook, both the import and export figures for motor cycles for May have fallen considerably, as compared with those for April. Only twenty-seven motor cycles were imported last month, while their total value is almost half the figure of the previous month. Over the same period exports were approximately 75% less. Detailed tables from the Board of Trade returns for April and May follow :

IMPORTS.

	April, 1921.		May, 1921.
Number of motor cycles	71	...	27
Value of machines and parts	£18,440	...	£9,415

BRITISH EXPORTS.

	April, 1921.		May, 1921.
Number of motor cycles	1,160	...	864
Value of motor cycles only	£92,823	...	£66,898
Value of parts	£26,785	...	£21,095
Total value ...	£119,708	...	£87,993

M.C.C. Inter-club Team Trial.

Twenty-five clubs have definitely entered teams for the M.C.C. inter-club team trial for *The Motor Cycle* Cup, to be held on Saturday, June 25th. It is possible that there may be two or three more late entries. A list of the competing clubs follows :

Leicester and District M.C.C.
Surbiton and District M.C.C.
Worcester and District M.C.C.
Coventry and Warwickshire M.C.C.
Brighton and Hove M.C.C.
Birmingham University M.C.C.
Motor Cycling Gipsy Club.
North-West London M.C.C.
Sheffield and Hallamshire M.C.C.
Banbury and District M.C.C.
Bucks County M.C.C.
Essex M.C.
Oxford M.C.
Woolwich, Plumstead, and District M.C.C.
Ealing and District M.C.C.
Brookdale Club, Catford (Motor Section).
City and Guilds Engineering College, M.C.C.
North London M.C.C.
Norfolk M.C. and L.C.C.
Rochester, Chatham, and District M.C. and L.C.C.
Camberley and District M.C.C.
Luton and South Beds A.C.
Herts M.C. and L.C.C.
Ilkley M.C. and L.C.C.
Basingstoke M.C.C.

Volunteer Officials Wanted.

Motor cyclists in the neighbourhood o Bournemouth, Blandford, Shaftesbury and Wimborne, who would be willing t assist in an official capacity in th Bournemouth Club's open trial on Jul 2nd, are asked to communicate with M E. L. Herring, at 44, Middle Road Bournemouth West. Reasonable expense would be allowed.

The Small Four-wheeler.

We believe (says *The Autocar*) tha there is a great future for the very smal four-wheeler of a type considerabl lighter and with a smaller engine tha that which represents what is generall known as a "light car."

CLUB NEWS. (Continued from page 745.)

Manchester M.C.

On Saturday next the club will hold a reliability trial for the Ferodo Cup (presented by Mr. Herbert Frood). The course will be a secret one of 80-100 miles.

Coventry and Warwickshire M.C.

Awards in the recent twenty-four-hour trial to Torquay and back have now been announced, and are as follows :

Gold Medals.—R. A. Player (4 Triumph) and T. H. Meakin (4 Triumph sc.).

Gold Centre Medals.—L. Crisp (4½ Humber), D. Atkin (5-6 Rover sc.), C. N. Green (5-6 Rover sc.), H. A. Smith (4 Triumph sc.), F. Yates (4½ Humber sc.), H. R. Caswell (5-6 Coventry Victor sc.), R. Grindlay (4½ Humber sc.), W. A. Fell Smith (8 Rex sc.), and T. R. Gibbons (8 Acme sc.).

Halifax and District M.C.C.

Held over a course that proved "too easy," and was voted dull by the competitors, the recent reliability trial nevertheless aroused great interest locally. B. Hanson (3½ P. and M.), F. E. Jackson (7-9 Harley-Davidson sc.), and A. Hinchcliffe (G.N.) tied for first place. Next in order of merit came C. Adams (4 Triumph sc.), W. Smith (5-6 A.J.S. sc.), and B. Barber (7-9 Harley-Davidson sc.).

Redditch and District M.C.C.

Formula and time results of speed trials held on June 1st, have now been decided, and are as follows :

TIME CLASSES.

350 c.c. Solo.—1, F. Wood (2¾ Verus) and T. Ward (2¾ Verus), tie; 2, T. Weaver (2¾ Verus); 3, Gem Smith (2¼ Morris).

600 c.c. Solo.—1, W. E. Smith (3½ Norton); 2, Gem Smith (3½ Martin); 3, F. Simmonds (3½ Norton).

Unlimited Solo.—1, W. E. Smith (3½ Norton); 2, T. Weaver (5-6 Verus); 3, F. Simmonds (3½ Norton).

750 c.c. Passenger.—1, W. E. Smith (3½ Norton sc.); 2, T. Weaver (5-6 Verus sc.).

Unlimited Passenger.—1, W. E. Smith (3½ Norton sc.); 2, T. Weaver (5-6 Verus sc.).

Fastest Time of Day.—W. E. Smith (3½ Norton).

FORMULA CLASSES.

350 c.c. Solo.—1, J. Dosher (2¼ Enfield) and T. Ward (2¾ Verus), tie; 2, T. Weaver (2¾ Verus) and F. Wood (2¾ Verus), tie; 3, C. Hull (2¼ Levis) and T. Weaver (2¼ Verus), tie.

600 c.c. Solo.—1, W. E. Smith (3½ Norton); 2, J. Dosher (2¼ Enfield); 3, Gem Smith (2¼ Morris).

Unlimited Solo.—1, J. Dosher (2½ Enfield); 2, W. E. Smith (3½ Norton); 3, G. Hull (2¼ Levis).

750 c.c Passenger.—1, W. E. Smith (3½ Norton sc.); 2, T. Weaver (5-6 Verus sc.).

Unlimited Passenger.—1, T. Weaver (5-6 Verus sc.); 2, W. E. Smith (3½ Norton sc.); 3, S. Bright (6 Enfield sc.).

Berwick and District M.C.

Results of the President's competition, which took the form of a consistency hill-climb, were as follows :

1, J. McLauchlan (4 Triumph), ⅝s. error; 2, W. H. Dodds (4 Triumph), 1s. error. Fastest time of day, W. Murray (3½ Sports Sunbeam).

Lewes and District M.C.C.

The club's first reliability trial was a great success, attracting nineteen competitors. There were very few failures, and the run was voted a most enjoyable one. Results :

SIDECARS.—1, S. Dunford (7-9 Harley-Davidson sc.), Matchless Cup; 2, G. W. Blakey (7-9 Harley-Davidson sc.), silver medal.

SOLOS.—1, G. E. Stacey (2¾ Verus), Enfield gold medal; 2, L. Holt (2¾ Verus), silver medal; 3, R. Arblaster (4 Coulson-B), bronze medal.

Taunton and District M.C. and L.C.C.

Buncombe Hill was again chosen as the venue of a hill-climb on Thursday last. Twelve classes drew sixty-eight entries from the Barnstaple, Bridgwater, Dorchester, Exeter, Taunton, Weston-super-Mare, and Yeovil clubs. An excellent afternoon's sport resulted, and some very fast times were recorded. The results were as follows :

TAUNTON CLUB ONLY.

Solo up to 270 c.c.—1, S. Crowhurst (2¼ Cedos), 1m. 7⅘s.; 2, F. Hewin (2¼ Cedos), 1m. 10⅘s.; 3, W. G. Churchill (2¼ Verus), 1m. 25⅘s.

Solo up to 350 c.c.—1, J. F. Anderson (2¾ A.J.S.), 47⅘s.; 2, W. G. Churchill (2¾ Verus), 50⅘s.; 3, W. H. Colman (2¾ Douglas).

Solo up to 600 c.c.—1, L. G. Williams (3½ Norton), 42s.; 2, S. W. Easton (3 A.B.C.), 42⅘s.; 3, S. Goodman (3½ Sunbeam), 44s.

Solo up to 1,000 c.c.—1, W. H. Colman (8 New Imperial), 39⅘s., fastest time of the day; 2, C. A. Pollard (8 Zenith), 40s.; 3, L. G. Williams (3½ Norton), 40⅘s.

Sidecar up to 600 c.c.—1, S. Goodman (3½ Sunbeam), 58s.; 2, W. H. Colman (4½ Quadrant), 1m. 20s.

Sidecar up to 1,000 c.c.—1, S. Goodman (3½ Sunbeam), 58⅘s.; 2, J. Skinner (6 Martinsyde), 1m. 8⅘s.

OPEN TO ALL CLUBS.

Solo up to 275 c.c.—1, F. Hewin (2¼ Cedos), 1m. 12s.; 2, W. G. Churchill (2¾ Verus), 1m. 26⅘s.

Solo up to 350 c.c.—1, S. F. Anderson (2¾ A.J.S.), 47⅘s.; 2, W. G. Churchill (2¾ Verus), 50⅘s.; 3, W. J. S. Bament (2¾ Douglas), 55s.

Solo up to 600 c.c.—1, V. G. Tucker (3½ Norton), 39⅘s.; 2, L. G. Williams (3½ Norton), 41s.

Solo up to 1,000 c.c.—1, C. A. Pollard (8 Zenith), 40s.; 2, L. G. Williams (3½ Norton), 40⅘s.

Sidecar up to 600 c.c.—1, S. House (3½ Norton), 51⅘s.; 2, S. Goodman (3½ Sunbeam), 57⅘s.

Sidecar up to 1,000 c.c.—1, S. House (3½ Norton), 51⅘s.; 2, C. A. Pollard (8 Zenith), 53s.; 3, S. Goodman (3½ Sunbeam), 58⅘s.

Birmingham M.C.C.

Thirty-two competitors started on th week-end trial to Llangollen on the 4t inst. There were few failures, and a lightweight sidecar outfit—a 2¾ h.p. Veru —completed the course and climbed every hill without loss of marks.

Standard M.C.C.

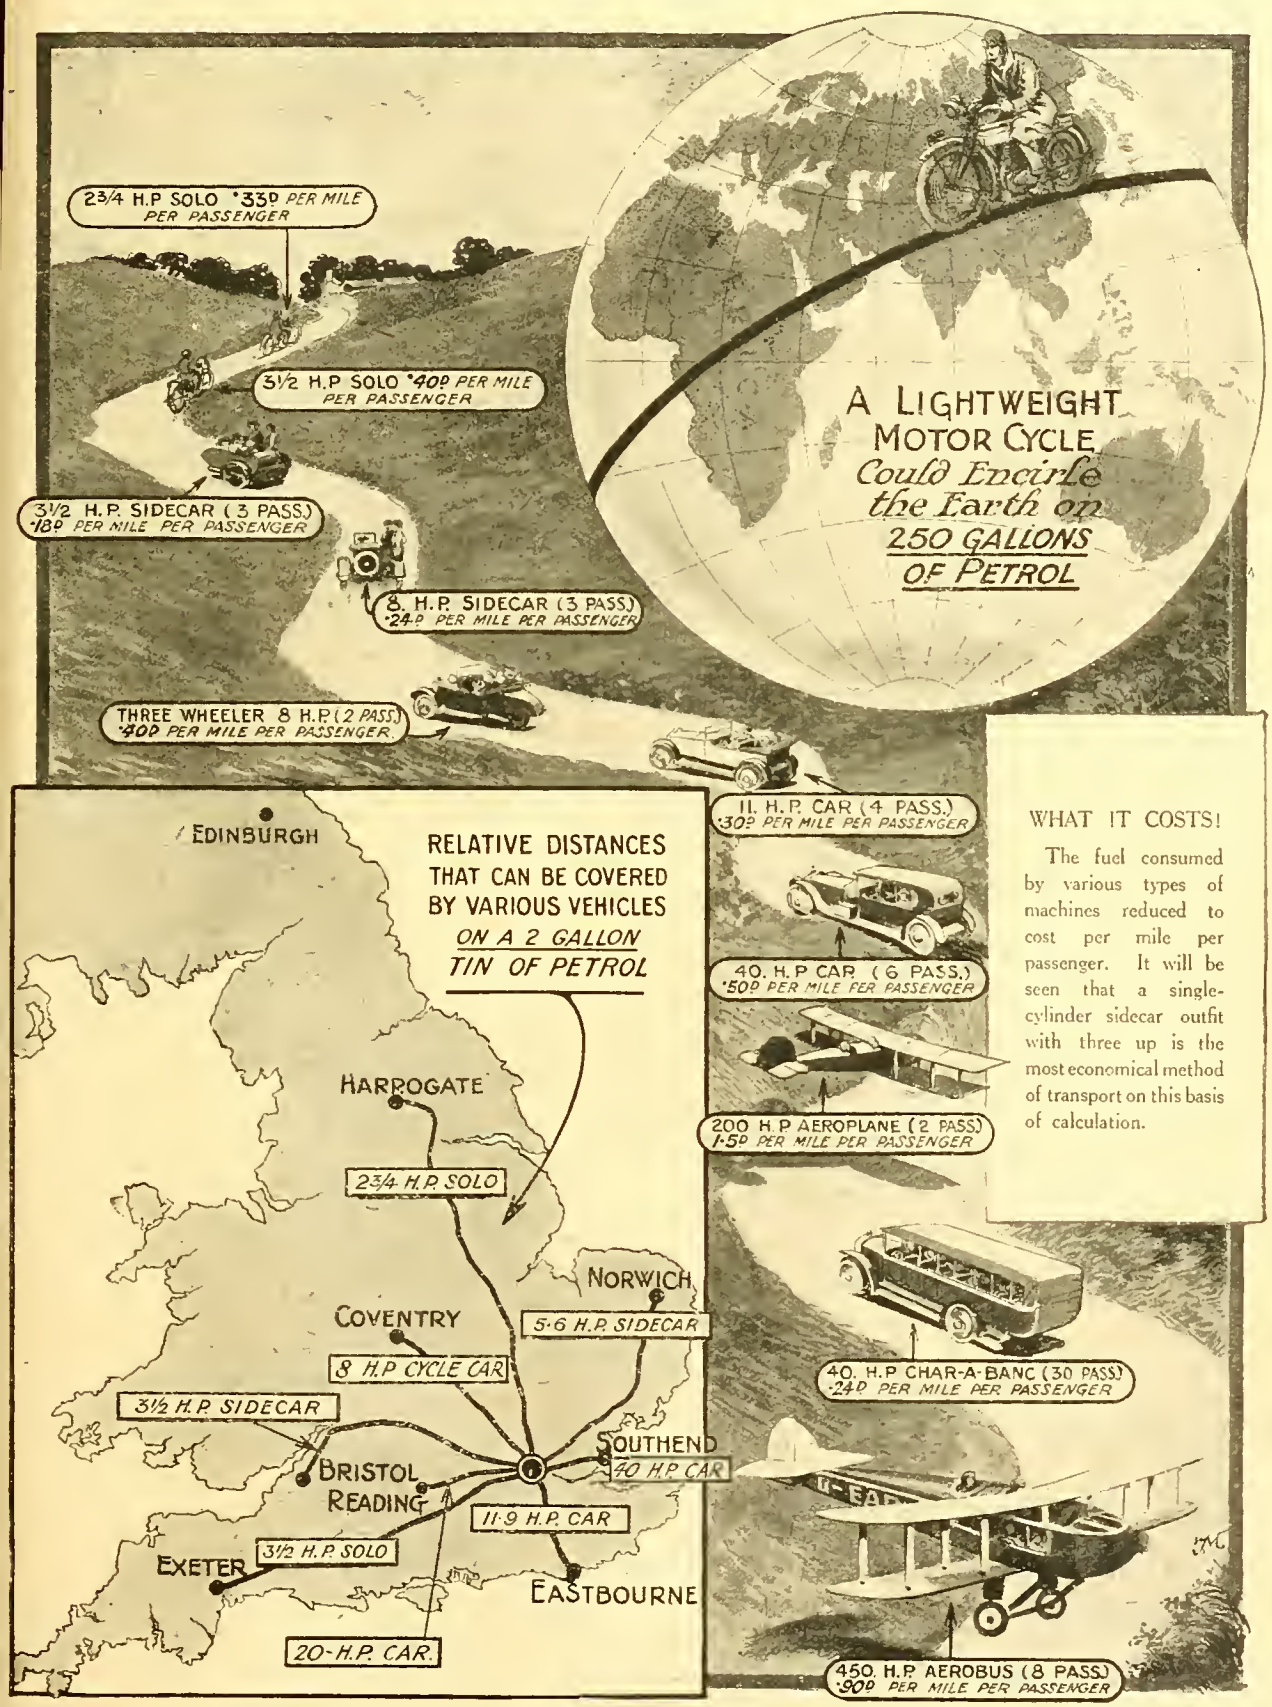
On Saturday a very successful tria was held, with the Maudes Challeng Shield and gold medal as premier award From an entry of seventy-eight ther were sixty-nine starters, but a course which included the ascent of Sun Rising twice, weeded the finishers to thirty-five

Romford and District Reliability Trial.

At the recent reliability trial to Cambridge and back, the best performance was made by W. Sharpe (3 A.B.C.), who lost only six marks, thus winning the Rhodes Cup and a gold medal. Second and third were W. G. Crabb (7-9 Indian) and D. S. Maitland (3½ Scott).

Warrington M.C.

S. Doward, on a 7-9 h.p. Indian, made the best performance in the recent reliability trial, losing only four marks. W. T. Haddock (2½ Thrasher), W. Moore (2¾ Douglas), and J. Bardsley (6 Martinsyde sc.) were first in their respective classes; while "amateur" prizes were won by W. Powell (2¼ Connaught), E. Tryer (4 Triumph), and C. Bingham (6 Enfield sc.).



North London M.C.C.

The slow hill-climb held at Handpost Hill on Saturday resulted in a victory for four-stroke machines. The event took the form of a knock-out competition, competitors ascending the hill in pairs. The results were as follows :

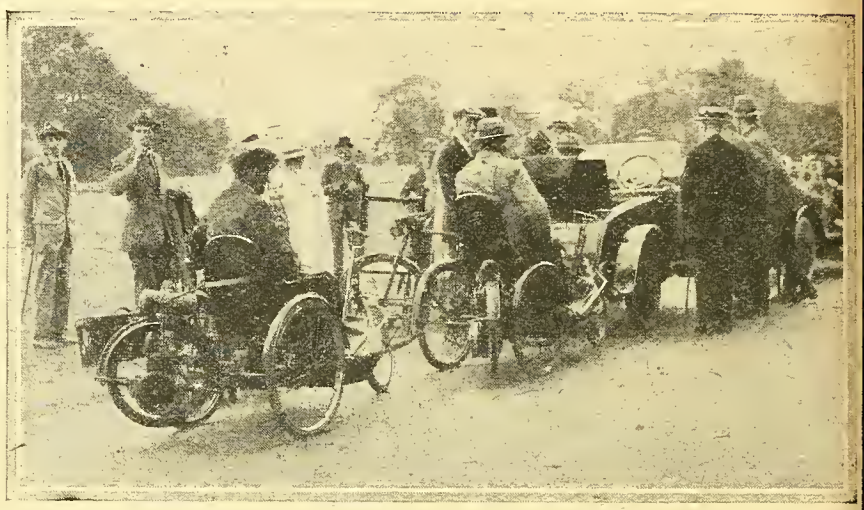
SOLO.—1, R. R. Bowen (4 Triumph), silver medal); 2, R. W. Greaves (4 Norton), bronze medal; 3, J. F. Hull (2¾ Wooler), an accessory.

SIDECAR.—1, R. L. Richardson (6 B.S.A.), silver medal; 2, C. N. Noel (4 Blackburne), bronze medal.

The attendance was good, and in view of the increasing attendance at club events it has been decided to make an award to the member who puts in the largest attendance for the second half of the year.

WHAT IT COSTS!

The fuel consumed by various types of machines reduced to cost per mile per passenger. It will be seen that a single-cylinder sidecar outfit with three up is the most economical method of transport on this basis of calculation.



COMPETITIONS FOR THE DISABLED.

Rally of the Disabled Drivers' Association at Richmond Park.

AN encouragingly large number of disabled ex-soldiers, including several sidecarists, assembled at Richmond Park, Surrey, on Saturday last to take part in the Disabled Drivers' Rally, the first meeting of the recently organised Disabled Drivers' Association.

The programme for the afternoon, which followed the assembly at Richmond Park, included a gymkhana at the rear of the grandstand on the Epsom Downs, and a hill-climb on the gradient in front of the stand, preceded by tea at Woodcote Park.

It was surprising but gratifying to see the ease by which these men, disabled by the war in hand or foot, were able to control their machines. Cycle cars and light cars, of course, are more easily adapted to the particular requirements of these limbless heroes, since the element of balance is eliminated. Sidecar outfits, however, figured prominently amongst the vehicles lined up at the rendezvous. A particularly ingenious arrangement of controls had been fitted to a Rover outfit for a rider who had lost the use of his right leg. Two large bicycle type handlebar levers were fitted, the left one controlling the clutch, and the right connected to the band brake, which was also operated by a long lever on the off side of the machine. Both controls, however, could be actuated independently. The kick-starter had been substituted by another long lever, whilst the valve lifter had been fitted to the top tube of the tank.

A scene in Richmond Park, last Saturday, where a rally of disabled ex-service men took place.

Another system was exemplified on a 4 h.p. H.B. outfit. The starter was again in the form of a long lever, whilst the rear rim brake was also lever-operated.

The new organisation is an excellent scheme, and should enable the members to enjoy the sporting runs and competitions which have previously been exclusive to the more fortunate. It is hoped that this event will be followed by many more such runs, and also that all drivers maimed in the war will come forward to swell the ranks of the new club.

ENTRIES FOR THE GRAND PRIX.

ENTRIES at ordinary fees for the French Grand Prix motor cycle race, which will be held at Le Mans on July 24th, have now closed, and fifty machines have been accepted. British makes are well represented. As entries are received by the Union Motocycliste de France at double fees (800 francs per machine) until the last day of June, it is likely that there will be sixty starters. The competitors comprise nine in the 250 c.c. class, eight in the 350 c.c. class, and thirty-three in the 500 c.c. class.

The following is the full list of entrants :

250 c.c.—Alcyon, Moto Solo (Clech), Moto Solo (Cottin), Labor, Velocette (two), and Griffon (three).

350 c.c.—Alcyon, Douglas (Isodi), Douglas (Schlée), Douglas (Gambini), D.F.R. (Pierre), D.F.R. (Dubost), Verus-Jap, and Thomann.

500 c.c.—B.S.A. (Pickering), B.S.A. (Gibbs), B.S.A. (Poole), B.S.A. (Chappaz), Norton (V. Horsman), Norton (H. Hassall), Norton (G. Walker), Alcyon (three), Bianchi (G. Maffeis), Sunbeam (two), Peugeot (Pean), Peugeot (Gillard), Peugeot (Benoit), Triumph (three), Douglas (Alexander), Douglas (Emerson), Douglas (Thorpe), Janoir (Duverne), A.B.C. (Naas), A.B.C. (Bartlett), A.B.C. (Finzi), A.B.C. (Rolly), A.B.C. (Bernard), A.B.C. (——), Griffon (Vuilliamy), Sicam (Trebla), Rover (Delarbre), and another not named.

As is generally known, the French Motor Cycle Grand Prix is being held in conjunction with the Car Grand Prix on a triangular course specially prepared for these two races on the outskirts of Le Mans. The motor cycle race profits enormously by this combination, for the entire course, which is about 10¾ miles round, has been relaid, and will be barricaded and guarded by troops for its entire length on the day of both of the races.

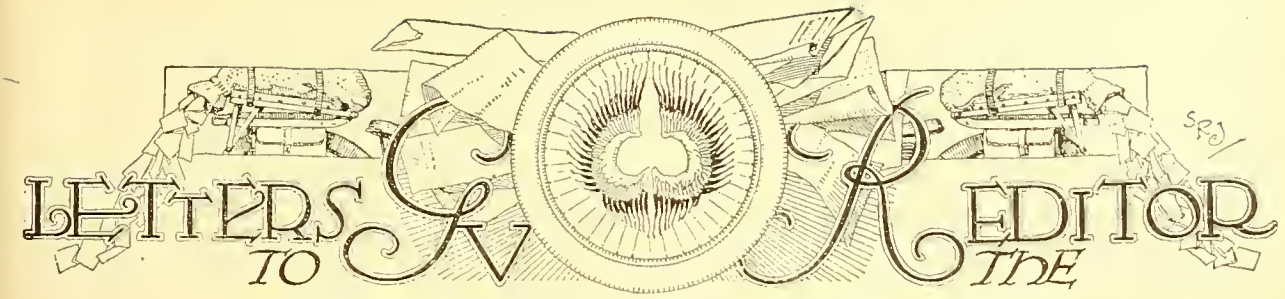
By being held on the eve of the big car race, the motor cycles will have the advantage of a perfect road surface; and, as the course is practically level with but three right-angle turns, the highest speeds can be attained.

NOVICES' OPEN TRIAL IN LEINSTER.

AN open novices' reliability trial, promoted by the Leinster Motor Cycle Club (Dublin), held on the 4th inst., attracted an entry of sixty riders, of whom fifty-four competed, and forty-two completed the course.

SPECIAL PRIZE for Best Performance of the Day.—T. F. Slevin (2¼ Velocette).

FIRST-CLASS AWARDS.



SILVER MEDALS.—T. F. Slevin (2¼ Velocette), S. Payne (2¾ Sun), G. Duggan (3½ Norton), G. M. Eccles (4 Omega), F. C. Felton (4¼ B.S.A.), N. Whitton (7-9 Indian), W. Jones (6 Enfield sc.), H. F. Moloney (3 Enfield), C. Callaghan (2¾ Royal Ruby), G. Callaghan (4 Triumph), H. L. Phillips (7-9 Harley sc.), W. F. Malcolmson (G.N.), and J. C. Donaldson (3½ Rudge).

BRONZE MEDALS.—R. H. Hill (2¾ Douglas), C. Maguire (2¼ Enfield), L. Forsyth (7-9 Indian sc.), C. Bradford (3½ Rudge), C. R. Jones (4 Douglas), W. H. Osborne (3½ P. and M. sc.), H. G. Ellerher (2¾ Douglas), Dr. T. F. Broderick (2¼ Levis), H. B. Evans (2¾ Douglas), G. Briggs (2¾ Douglas), D. McCrea (3½ Rudge), W. G. Rogan (2¾ Hobart), A. Deverell (3½ B.S.A.), W. N. Kyle (2¼ Enfield), H. McClintock (3½ Premier), G. A. Graham (8 Enfield sc.), F. C. Parkes (4 Triumph), J. T. Cathcart (2¼ James), W. J. Fagan (5 Indian), and F. N. Draper (2¼ Velocette).

CHOSEN ROUTES FOR THE ILKLEY TRIAL.

BY the manner in which it organised the one day open trial under the A.C.U. last year, the Ilkley Motor Cycle and Light Car Club earned for itself a high reputation, providing one of the most sporting day's rides that has yet been enjoyed in the North. This year, by the manner in which it is entering upon the arrangements for the open trial, to be held on July 16th, it looks like adding materially to that reputation.

The solo riders climb Middle Tongue Hill in Nidderdale, Summer Lodge (famous as the hill which caused the "strike" in last year's Six Days Trial), and Preston Scar in Wensleydale. The sidecar men miss these delights, but, as a compensation for Summer Lodge, they are sent round by the Buttertubs Pass. The total mileage for the solo machines will be 168¾, and for the sidecar riders 174½.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

FOLLOWING THE SPORT ON PAPER.

Sir,—I was much pleased to see that one of the opening articles in a recent issue related to "following the sport on paper." I know quite a number of readers in my locality who are not only content to but really enjoy following the sport on paper.

I am really writing this note (there are hundreds thinking the same thing, but not writing) to let you know that we (readers, but not riders) are exceptionally pleased to see that you appreciate us so much. I am writing from a knowledge of readers in this district, and I feel sure it will stand good all over the country.

I might also mention that the technical side of your paper is most interesting, but for the benefit of your less learned readers a small explanation of the more scientific and algebraic terms sometimes used would make *The Motor Cycle* the best that money could buy. STRANRAER.

Stranraer, Scotland.

SIDECARS FOR DISABLED DRIVERS.

Sir,—Referring to a letter on page 650 requiring information on sidecars for disabled riders, and signed "1914-1919," you will be interested to hear that we recently adapted the Connaught £100 outfit for a man who has lost his left leg.

In his case we had to transfer the foot brake (already on the left) to the right hand side. We made a few other minor alterations, and, as a result, he is riding the outfit daily without difficulty. WARLAND DUAL RIM CO., LTD.

Sir,—Replying to "1914-1919's" letter I may say that I had the misfortune to lose my leg in the war—the left leg, 4in. above the knee.

I am riding a 4 h.p. Triumph and sidecar, and I find that there is no discomfort in using the ordinary saddle.

The brake pedal is, as you know, on the left, and cannot be transferred very easily. This difficulty was surmounted by having two straps passing through the hole in the brake pedal, and making them into two loops into which I insert my artificial boot, and while keeping the foot in place I find that by having a stronger spring on the back brake the weight of the leg does not put the brake on until such times as is necessary, when it can be manipulated with the greatest ease. In fact, the leg being always in contact with the brake makes for a quicker action in emergencies. I have arranged the foot rest on that side so that it does not interfere with the brake.

Does anyone know if the Triumph brake pedal could be made to operate from the right?

NORMAN D. BROOKS.

Sir,—On my 1920 5-6 h.p. Rover sidecar, which is entirely hand controlled, the straightforward design of the machine lends itself more easily to alteration of controls than many makes, and, further, has the advantage of being of good weight, having large wheels, long wheelbase, and, most important, a low saddle position.

The clutch and brake controls (standard being foot) are operated by levers on the handle-bars and working by $\frac{3}{16}$in. stranded cable in rigid metal tubing. A lever brake is also fitted, acting on a friction principle. The gear change is central. The footboards require edgings round to keep one's feet from bouncing off.

Further, a substantial saddle cover is necessary to save one's trousers from wear due to contact between the hard artificial leg and saddle. (This from experience, alas!) An ordinary large size Brooks saddle is very comfortable.

A lever starting gear is fitted to the kick start spindle, discarding the crank. The exhaust lift lever is fitted to the top main tube in a suitable position.

These alterations were satisfactorily carried out by Mr. P. W Surplice, of Bournemouth, after about six weeks experimenting. Needless to say I have no trade connection with him, but can thoroughly recommend him, as he has fitted out other machines for one-legged riders, mine being his first double case, for I have lost both legs.

The tax is only 5s. for a converted machine. R.G.P.

Parkstone.

JOURNAL BEARINGS FOR MOTOR CYCLE HUBS.

Sir,—Mr. A. J. Hobdell wishes to know the experience of those who have used journal bearings in the front wheels. This is my experience. I fitted a journal hub in 1919, with the result that the set of bearings in when fitted and two sets since are worn out. A fourth set is now wanted badly. The two new sets cost me, at least, 25s. per set. I have used both single and double rows of balls, but there is no adjustment, and they have "gone wobbly" very soon indeed.

Manchester. S.W.

Sir,—I am very surprised to see that Mr. Hobdell's letter in a recent issue has not received the attention it deserves—not only at the hands of motor cycle manufacturers, but by the makers of the bearings themselves, who, one would imagine, would be in the best position to speak authoritatively on the subject.

As a humble member of the motor trade, it has interested me greatly to note the gradual adoption of roller and ball bearings for gear boxes and engines, and I suppose the change will eventually be made with motor cycle hubs.

I am in agreement with Mr. Hobdell, that with a sidecar machine, the side pull will be considerable, and, personally, I do not think the usual bearing would deal with this. A thrust bearing would be required.

Perhaps the bearing makers will enlighten us as to the ability of journal bearings (both roller and ball) to deal with such loads.

Do we take another lesson from car practice? Makers of car hubs are effecting the change now even with the cheaper makes. The better cars have been so fitted for years.

Orsett. W.B.S.

CONSIDERATION FOR THE DANGEROUSLY ILL.

Sir,—With a son lying dangerously ill, and with straw on the road for fifty yards in front of my residence to deaden the sound of traffic, as a motorist of twenty-five years' standing I have been surprised to find that my fellow motorists, in a very large proportion, seem to be lacking in all thought or consideration for those who are suffering the tortures of pain and distress.

The sight of straw or peat covering a road is surely an indication to the meanest intellect to refrain from noise, yet car drivers and motor cyclists—the latter the greatest offenders—have blown hooters, opened exhaust cut-outs, and shown by the expression in their faces that the straw obstruction was a nuisance to them, and that the suffering of a fellow creature was of little consequence.

May I, as an old motorist, ask you to suggest the adoption of a code rule amongst those who drive cars or motor cycles that straw or peat covering a road should in future be recognised as a road sign, and indicate to all to go slowly, make the least noise, and refrain from hooting within five hundred yards? R. A. OSMAN.

AIR COOLING AND OIL COOLING.

Sir,—*Re* Mr. Granville Bradshaw's article on cooling of motor cycle engines, I had a peculiar experience while driving a Napier lorry in the M.T., A.S.C. One day while proceeding from Crowborough to Tonbridge the lower joint of the radiator burst, leaving the engine absolutely dry. I went some four or five miles before I became aware something was wrong. After waiting an hour and rejointing, I filled up with water and started up. The engine started, ticking very nicely—much quieter than before, as previously it had been badly carboned up.

I attributed the fact that neither bearings, valves, pistons, or cylinders were damaged to consistent over-oiling, as I was new to lorry driving, and thought I had to keep the engine smoking! Also, I was using Wakefield's Castrol, as the depot had run out of everything but motor cycle oil.

Glasgow. M.T.

Sir,—On reading the first instalment of Mr. Bradshaw's article, I gather that air-cooling at its best, with natural draught, is, as we may say, barely good enough for its purpose. Water-cooling is all right, but too cumbersome and complicated. May I, then, enquire—and I would be very glad of Mr. Bradshaw's reply—whether the use of a simple compromise, in the form of a Perkin tube, has ever been seriously considered?

Since it is not everyone who knows what a Perkin tube is, I may say that it consists of a strong walled tube partly filled with water and hermetically sealed at both ends. It was used in a motor car radiator system some ten or fifteen years ago by, I think, the Lune Valley Engineering Co., of Lancaster, but in that case it complicated rather than simplified the cooling system. It acts, of course, as a very efficient means of transmitting heat at temperatures above boiling point only, and is ever so much more efficient than rods of any metal. That it would stand the high temperature of an air-cooled cylinder is clear from the fact that it has been used with one end in a furnace and the other in the ovens in which bread was baked. That was used, of course, for heating rather than cooling, but the principle is the same. My question to Mr. Bradshaw would be as to whether he thinks it would be practicable and worth trial to embed the lower ends of a series of Perkin tubes (say ¼in. outside and ⅜in. inside diameter) in the cylinder walls and head, and to fit the upper ends with cooling gills.

Having no means at disposal for making such an experiment, but in the belief that the method would have certain distinct advantages even over water-cooling, I would be very glad to know that the matter was being considered by others who want to see petrol engines improved. J. H. LESTER.

"O wad some power the giftie gie us,
To see oursel's as ithers see us!"—*Burns.*

AVERAGE AND MAXIMUM SPEEDS.

Sir,—I have been very much interested in the letter from Mr. R. C. Atcherley, *re* the speed of 60 m.p.h. which he asserts he has obtained from a 1919 Triumph, and should advise him to take up speed in earnest, as this is really remarkable from a standard Triumph. I am afraid I am a little late in answering his letter, but I have only just returned from a 900 mile journey, and, being the possessor of a quite good sporting 'bus, which is really fast, I am especially interested, as, although I was a D.R. from 1914 until 1919 (riding only Triumphs—in that time I had nine new machines, and since demobilisation have had three of that make), it was, I always thought, a very good "tub" that would do fifty. Whilst I am a great admirer of the Triumph as being a bicycle for every-day work, I shall want a lot of convincing *re* his mile a minute machine, as, although on paper, and in conversation, sixty is often mentioned, I think I am not far wrong in saying that it is like the fish the angler talks about, very much exaggerated. I would suggest that Mr. Atcherley verifies the truth of his speedometer. Let us pass on to the letter of Mr. L. W. E. Hartley, *re* averaging thirty. On a recent Saturday, starting at 10 a.m. and finishing at 6.30 p.m., including stops for petrol, I covered a distance of 219 miles, which works out somewhere about 25 m.p.h.; and I did not stop to admire any scenery nor to pick daisies, but just kept going. Although I am as fond of speed as anyone, I really do not think that on a really hard day's running one can average much above this.

The machine I am at present riding is my eleventh since being "demobbed" (and three I had pre-war), and I think I can honestly claim I have ridden every class of motor cycle barring a big four-cylinder 'bus. I am immensely fond of speed, I love speed, I even thrive (up to the present) on speed; and the reason I have had so many changes is that I am always on the lookout for a faster 'bus, and, as I do quite a lot of riding (4,600 miles in the last three months), I think I may claim to know a little of road speeds, averages, and the speeds of standard machines.

I also use a fairly accurate speedometer, and do not do my riding with large exhaust pipe, leather coat, and blasé attitude, round the local park, as so many of our 60 m.p.h. speedmen do! RELKCUB.

Cardiff.

EAST END CHILDREN'S OUTING.

Sir,—Permit me to thank you for your kind support of Mr. Loughborough's recent appeal for motor cyclists who would volunteer to convey children from Bow to Hertfordshire for a day in the country, and to express my most grateful thanks to those who so kindly responded and so enabled the effort to be carried out successfully.

When each contributed according to his power, it may seem invidious to mention names, but I must especially thank Mr. A. J. M. Ivison, of Mill Hill, to whose untiring efforts the success of the outing was mainly due, and Mr. Duncan Watson, chairman of the Harley-Davidson Co., who most generously presented a large box of chocolates to each of the sixty children.

May I venture to add the hope that this effort will be improved upon by others?

A day's happiness in the country, to a child of the slums, is worth a little self-sacrifice—and I have found that motor cyclists are good-hearted sportsmen always.

THE HOST OF THE OCCASION.

Harpenden.

RETAINING OIL ON THE MAGNETO CHAIN.

Sir,—I have had the same trouble as Mr. Willoughby, only my "'bus" used to pull up and stop. If first the chain is taken off and cleaned in paraffin, and boiled in a mixture of tallow and blacklead for a few minutes (so that this lubricant will get under the rollers), and then when in place smeared with plenty of Prices' Bermoline it should not cause any more trouble. G. E. JACKSON.

Sir,—I notice that one of your readers has been troubled with magneto chain lubrication. I think the following method, if carried out, will overcome that difficulty.

Remove the chain cover, smear the chain with graphite; replace cover very tightly after seeing that both faces are clean. From the flywheel side of the engine, a small opening will be noticed in the chain cover against the magneto sprocket wheel; oil freely here, making the chain cover act as an oil bath. LUBRICATION.
Worksop.

Sir,—Referring to the letter by Mr. J. L. Willoughby, *re* "Retaining Oil on the Magneto Chain," a friend and I had the same trouble on a 1920 two-stroke. An unusual stiffness in the engine was traced to the magneto chain, which was found bone dry with the links standing up like the teeth of a saw, and bright red rust exuding from every bearing surface. The chain was soaked in paraffin, carefully eased, and well brushed over with engine oil, but after about thirty miles it was as bad as ever. The alignment of the magneto was tested and found O.K. by the agent, who replaced the chain free. This promptly went the same way, so we drilled a hole in the casing (pressed steel), and injected plenty of oil before every run without any improvement. "Stewing" in graphite grease cured the trouble for about one hundred miles.

It looks to me as if the chain, after slinging the lubricant off, gradually heats up, until, on a long run, it becomes practically *red hot*, which would explain the bright coloured rust working out from the inner surfaces of the chain. Stewing in graphite grease every one hundred miles, a really well-fitting oil bath case or a liberal drip feed are my only suggestions. Perhaps the makers or the chain manufacturers can cast some light on the subject.
E. A. L. PARKER.

Sir,—As most of my riding has been, and is being, done on a Villiers-engined machine, Mr. J. L. Willoughby's letter naturally caught my eye. His trouble in keeping the chain oily is, I think, shared by many, but is, in many cases, an example of "what the eye does not see," because I daresay that, had the rattle not drawn his attention to it, Mr. Willoughby would have forgotten the existence of the chain altogether. Chemico chain lubricant should be better than oil, I should imagine, and can be recommended. As regards the rattle, I should imagine that the chain is out of line, and, perhaps, also one of the sprockets eccentric. This rattle once worried me on a 1914 Villiers. On that engine the magneto rested on two rails cast on to the silencer ends. The cure was effected by new type engine plates and magneto platform. OE 1382.
Harborne.

MORE ABOUT THE ARBUTHNOT TROPHY TRIAL.

Sir,—In reply to "K15's" letter about last year's Arbuthnot Trophy Trial, published in *The Motor Cycle* of June 2nd, is he not rather hurriedly drawing conclusions when he describes it as a machine smashing trial?

I gather that he was at the finish of the trial and heard the competitors' accounts, which would, no doubt, have exaggerated the poor state of some of the roads. He states that he saw the machines at the finish. Did he see them at the start? I was unable to compete in last year's event, but, judging from the account in *The Motor Cycle*, and knowing something of the district in which the trial was held, I concluded that most of the failures were due to the machines not being properly prepared, and that some were due to bad luck. Owing to the wet weather, the course was stiffer than it might have been, but, even so, the roads were good compared to those in several other trials, where, not only do machines complete the course, but also several gain gold medals and are in a fit state for riding at the end. Surely, therefore, the Arbuthnot Trophy Trial cannot be accused of "machine smashing."

I have only been able to compete in a few of the easier type of trials, but only on one occasion have I smashed up my machine, and that instance was entirely due to my own stupidity.

I do not think "K15" is justified in calling the roads in question "a collection of rocks and boulders," as is suggested in his last paragraph.

Last year's course was ideal for the class of competitor concerned. I am sure that "K15" will agree with me that the course must be stiff enough to find a winner without falling back on acceleration tests, etc., the results of which depend so largely on the machine, when, as far as possible, only the personal element should be tested in a trial of this nature.

Trials are one of the best sports extant, and I think it is up to all naval officers who are at all keen on motor cycling, to make every effort to compete in this year's event and make it a real success. I am sure they will enjoy it.
H. F. FELLOWES, Lt. R.N.

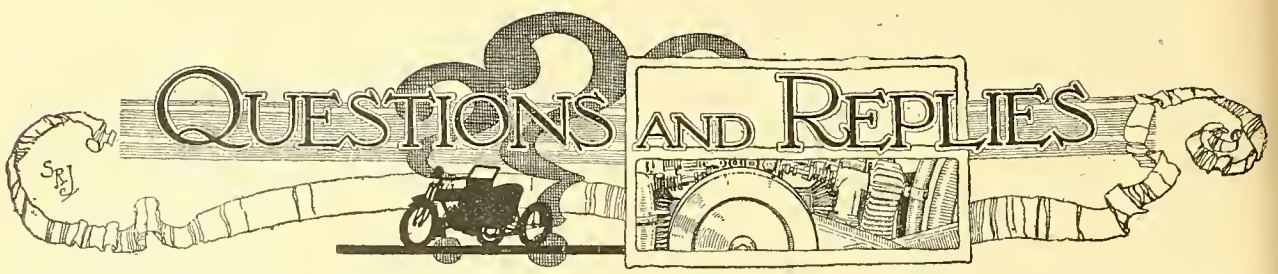
Sir,—I have just read a letter in your issue of June 2nd, which is distinctly liable to frighten off intending competitors in this year's Arbuthnot Trophy Trial, who know nothing of competition riding.

I saw in *The Motor Cycle* of May 27th that the course to be followed this year is to be much the same as that of the A.C.U. one-day trial. As a competitor in the latter event, and an intending competitor in the Arbuthnot, I would like to assure everyone that there is nothing included which might be considered of a "machine smashing" nature even by gentlemen with such a lively imagination as "K 15." Let him by all means bring along a pocketful of corks if he wants to; they are such useful things!

I think if more "N.O.'s" realised what a thoroughly sporting and enjoyable event the Arbuthnot Trophy is they would do everything in their power to compete every year. A better two days for a keen amateur motor cyclist cannot be imagined, and there is no risk whatever of smashing one's machine. HALF LITRE.
Penally.

SUMMARY OF CORRESPONDENCE.

Referring to "Puzzled's" letter last week under the heading "Solution Next Week!" the cause of his trouble was that the piston had been replaced with the baffle the wrong way round.



An Irish correspondent recently went to considerable trouble to help a stranded B.S.A. rider who broke an exhaust valve outside our reader's house. It was a very wet day, and, amongst other things, the motor cyclist borrowed an overall coat. He has not yet returned this. The address of our correspondent is Killinear House, Drogheda.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*

	Price. net.	Book post.
"MOTOR CYCLES AND HOW TO MANAGE THEM." The standard handbook on the motor cycle. It deals with every part of the machine, and with every type of machine, and will be found invaluable to all motor cycle riders. New Edition. Just published	2/6	2/10
"TRACING MOTOR CYCLE TROUBLES" A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/-	2/3
"MAGNETOS" By A. P. Young. A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes, from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES" By "Ixion," of *The Motor Cycle*	5/-	5/3
"THE MOTOR CYCLE" ROAD MAPS. England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10
"THE MOTOR CYCLE" ROUTE BOOK With 32 pages of Road Maps of England and Wales, Scotland, and the London District ..	5/-	5/4

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

FITTING A GEAR BOX.

Please state whether it is possible to convert satisfactorily a 1910 3½ h.p. fixed engine Triumph into a three-speed kick-starter model by fitting a gear box, etc., on to the bracket between the mudguard and engine bearers?—T.B.

It will be impossible to fit a countershaft gear box on your 1910 Triumph unless you have new rear stays fitted to the frame; the new stays must have a special bracket suitable for carrying the gear box.

CARE OF 4 H.P. DOUGLAS.

Kindly advise me on the following concerning my 4 h.p. Douglas. (1.) What brand of lubricating oil do you recommend for engine, gear box, and timing gear respectively? (2.) Does the multiple disc clutch require lubrication? If so, what is the best lubricant? (3.) The Amac carburetter is at present fitted with a No. 28 jet. What adjustments are necessary for using benzole?—L.T.

(1.) A good quality oil of medium body will suit the engine and gear box, although a slightly thicker oil would perhaps be preferable in the latter. There is no need to lubricate the timing gear separately, as it receives the necessary amount of oil automatically. (2.) The clutch does not require lubrication. (3.) It may be necessary to lower the level slightly when using benzole, and possibly a slightly smaller jet will be an advantage.

A SILENT MACHINE WANTED.

As a regular reader of your paper, I should be glad if you would advise me on the following point. I have a 7-9 h.p. 1919 Powerplus Indian, which is most noisy. What can I do (even with slight loss of power) to remedy the fault? Would you recommend an aluminium silencer?—T.P.R.

These machines are not usually noisy, and we can only think that the silencer on your machine has either become damaged or has been altered in some way. (We assume, of course, that you are not driving permanently with the spark retarded.) It is doubtful if you can obtain any silencer which may be readily fitted to your machine, as considerable alteration to the existing exhaust pipes would be necessary.

CONVERTING A TWO-SPEED CONTROL.

I have a 3 h.p. Enfield two-speed and kick-starter, but I do not like the present method of engaging the gears. (1.) Could these be made foot-controlled as the Scott? (2.) If this is not possible, could it be done from the handle-bars?—A.L.

It would be extremely difficult to make the Enfield gear control suitable for foot operation, although a good mechanic with workshop facilities could no doubt devise a method. Handle-bar control also does not lend itself to adaptation in this case, as the force required to engage the gears would very quickly cause flexible wire mechanism to become out of adjustment; the design of a control would also be difficult.

FAULTY JOINTS ON TWO-STROKE.

An American two-stroke engine which I overhauled recently will not start except for an occasional explosion, but the spark appears very good, and the carburetter is so simple that I cannot see how any fault could be there. On turning the flywheel there is a hissing between the cylinder and crank case. Should this be gas-tight? (1.) Could you suggest a possible cure? (2.) Will benzole damage the cork float of the carburetter?—G.F.

(1.) There should be no leakage between the cylinder and crank case, and you must remove the former and remake the joint with thick brown paper, smeared with seccotine. (2.) Unless the cork float is periodically varnished with shellac, it will be damaged eventually by benzole.

REAR PLUG OILING-UP.

(1.) The back plug of my Douglas is continually sooting up. I have just had new piston rings put in, and I drained all the oil out, thinking there might be a stoppage in the overflow. I have also had a new plug in, but none of these things cure it. The machine runs well until the plug soots up; when the plug is cleaned it goes off again without a hitch. It is a 1919 machine, and I have been using petrol. I have had no trouble up to about a month ago. (2.) Would paraffin or a mixture (say half and half) of paraffin and petrol be injurious to the engine of the above machine?—E.M.C.

The trouble is evidently due to over-lubrication of the back cylinder; this is a common occurrence on horizontally-opposed engines, which should not be over-oiled. You might limit the supply of oil slightly, and it would be advisable to increase the gap of the sparking plug points in the offending cylinder: it will do no harm if you open them about $\frac{1}{16}$in. or even $\frac{1}{10}$in. (2.) A mixture of half paraffin and half petrol would not injure the engine in any way, although the running might be a little harsh.

Important Dates.

Thurs. June 16th—Senior T.T. Race.
Sat., June 18th—North-Western Centre A.C.U. Open Speed Trials
Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup
Fri., July 1st, and Sat., July 2nd—Arbuthnot Trophy Trial.
Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.
Sat. July 2nd—500 Mile Race at Brooklands for the Miller Gold Cup.
Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials
Sat., July 9th—St. Andrews Speed Trials
Sat., July 9th—Cardiff M.C.C. and associated clubs Open Hill Climb.
Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.
Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.
Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials.
Sun., July 24th—Motor Cycle Grand Prix Race in France.
Sat., July 30th—Newcastle and District M.C. Open Speed Trials.
Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.
Sat., Aug. 6th—B.M.C.R.C. Open Brooklands Meeting.
Sat. Aug. 6th—North Wales M.C.C. Open Reliability Trial.
Fri. Aug. 12th—Motor Cycle Grand Prix in Belgium.
Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.
Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.
Thurs. Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.
Mon., Aug. 29th, to Sat., Sept. 3rd—A.C.U. Six Days Trial.
Sat., Sept. 17th—Grand Prix Race for Cycle Cars.
Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

Read the following:—

NEW ROVER CYCLE CO., LTD.,
May 28th, 1921.

"You will be very pleased to learn that the Rover Motor Bicycles, on Saturday last, achieved a very big success. One of our 3½ h.p. machines ridden by Mr. Ravenhall won the only three Amateur Speed Trials for Sidecars at Stile Cop Hill Climb in the following classes :—

500 c.c. Class
750 c.c. Class
1,000 c.c. Class

"It will probably be gratifying to you to know that the gear box for this particular machine was fitted with your clutch plates, which evidently stood the test extraordinarily well."

VELOCE LTD., 1921.

"It may interest you to know that your 'DON' Brake Lining was used on all three Velocette Machines which competed so successfully in the 1920 *A.C.U. Six Days Trial. It was found to be quite satisfactory in all cases, and has since been used both for competition and touring purposes."*

CYCLES MOTOR CYCLES

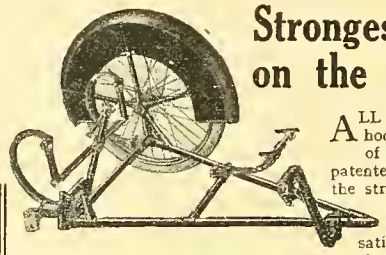
This Week's Selection.

Ingle Nook, Bury Road,
Rochdale.
25/5/21.

Dear Sirs,

I must write and tell you how extremely pleased I am with my 1920 James 2¼ h.p. 2-stroke. Last Easter I went to Croydon (10 miles far side of London). The journey from Rochdale is 210 miles. This I did in 10 hours, without any trouble whatsoever. I emptied the petrol tank at commencement, and put one gallon in. This ran out at Stony Stratford, 140 miles away. On the return journey, which I did the day following, I repeated the performance, *i.e.*, a non-stop run home, 420 miles, and not one hitch.

I have done roughly 5,000 miles with this machine, and have yet to have my first trouble. I have not even had a sooted plug, I use the machine daily for business, and beyond filling up with oil and petrol, and lubricating machine, I have never needed to touch it. It has so far been a **wonderful machine.**



I have also done 200 miles with a passenger on carrier, 11 stone 6 lbs., and no signs of heating up.

Wishing you every success.

A satisfied owner,
EDWARD S. DUNCAN.

Any Manufacturer can make wild unsupported statements concerning his own machines. The words "best," "fastest," "most reliable," etc., are becoming positively wearisome.
We propose, therefore, to publish—week by week—in this space an unedited letter from a private owner and rider selected from our weekly post, with a view to giving the motor cyclist a fellow rider's opinion of the machines we turn out.

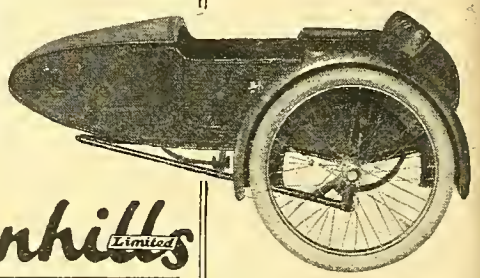
OFFICES & WORKS, GREET, BIRMINGHAM "JAMES" London Depot 22 Holborn Viaduct, E.C.1

Strongest lightweight on the road



ALL Dunhill Sidecar Chassis embody the triangular frame design of which we were the original patentees (No. 4784/15). This gives the strongest *possible* chassis, which is yet exceedingly light in weight. Dunhill Chassis satisfactorily do the work of other chassis more than twice their weight.

Obviously, then, the Dunhill patent triangular design materially reduces running cost and enables you to get better service from your sidecar outfit. The triangular frame design is described and illustrated very carefully and thoroughly in our catalogue, a copy of which we shall be happy to send on request.

Illustration shows our model A.35 Underslung Lightweight Chassis, suitable for machines up to 3½ h.p. The patented triangular principle gives exceptional strength and rigidity, combined with minimum weight. Frame distortion is totally impossible. The chassis is well sprung, having large Cee springs at the rear and a semi-elliptic leaf spring in front. It is made throughout in our own motor shops from the best quality solid drawn steel tube.
The three-point attachment fittings are machined from the solid steel bar—eliminating all risk of breakage at these points.
Price of chassis only.. .. .. £18.

Dunhill Lightweight body, model B.36, for machines up to 4 h.p. Smartly finished, attractive design, strongly made, very light, ample room for tools, and plenty of leg room. With or without door. Standard colour green, upholstered leather cloth to match.

Price, mounted on A.35 chassis as described above. **£30.**

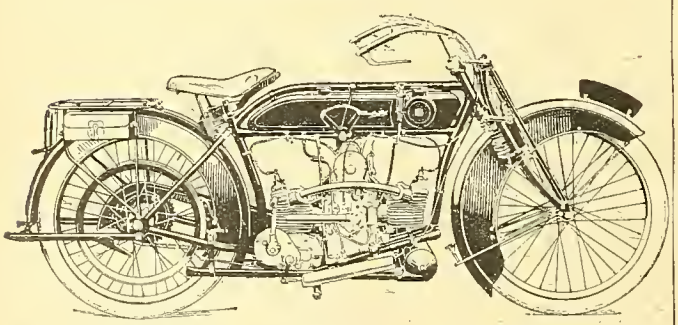
THE Humber

4½ h.p.
Flat Twin.

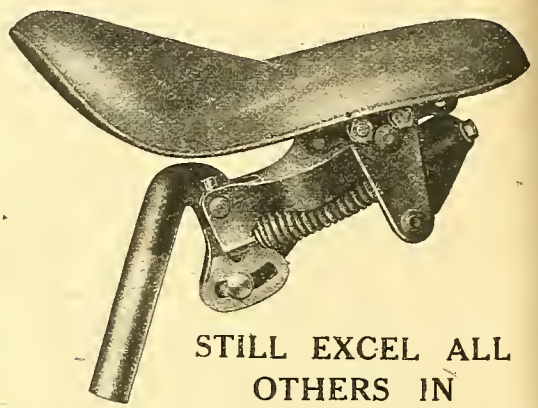
"One of the Quietest Machines on the Road."



PRAISE indeed, and fully justified in its application to the Flat Twin-cylinder Humber Motor Cycle, a model which has been described in motor cycling quarters as "Coventry's finest production." Certainly, the outstanding feature of the engine is its almost uncanny silence. The machine has won many conspicuous successes in recent trials, and greatly enhanced its popularity thereby.

The following letter from a purchaser is an illustration of the satisfaction which is generally expressed by owners:—

"The 4½ h.p. 'Humber' Combination I purchased from you last July has been entirely satisfactory. It is comfortable, fast, and has ample power for all the running I have, or am likely to put it to. I obtained the FIRST PRIZE in the Reliability Trials held by the Rugby and District Motor Cycle Club, on April 24/21. I did a non-stop run without the slightest difficulty or worry. I can thoroughly recommend the 4½ h.p. 'Humber' to anyone who wishes for reliability and comfort combined with a very useful turn of speed."



Before choosing your machine write for full descriptive booklet.

BENETFINKS, 107, CHEAPSIDE, LONDON, E.C.2.

You cannot be certain

without the help of a pressure gauge whether the air pressure in your tyres is right. Pressures must be right if you would get the utmost mileage and safety and comfort out of the tyres. When tyres were small it was fairly easy "to make a good guess," but, nowadays, when tyres are up to 28in. x 3½in., under or over-inflation is very difficult to avoid unless you can test the air pressure. Under-inflation causes heavy wear and drag, and makes steering difficult. Over-inflation means discomfort.

Insist on having the

Schrader Universal TYRE VALVE

"Schrader Universal" Motor Cycle Tyre Valves are one piece, jointless air-tight valves which require less frequent inflation, and which can be easily and quickly tested—with a minimum of trouble—by a tyre pressure gauge.

With "Schrader Universal" Tyre Valves you can get your pressures right, and keep them so. "Insides" need no adjusting for inflation; they are easily removed or replaced by using the slots of valve cap as a key. Extra "insides" can be had from all good dealers.

CONVERSIONS

The valves on your present tyres—if not already "Schrader Universals," can be adapted to the "Schrader Universal" principle at a trifling cost. And then you will have no inconvenience from leakages, arising from perished valve rubbers, or other causes. Write to us for particulars.

Illustrated Booklets post free.

Try the SHALER way

It's perfectly simple—anyone can produce a clean, firm, permanent tube repair at the first attempt. No expert knowledge of vulcanising is needed—and the resultant repair becomes part of the tube itself. The

SHALER Five Minute Vulcaniser

is used with perfect success by more than a million motorists all over the world. Use the Shaler, and save time, trouble, and money.

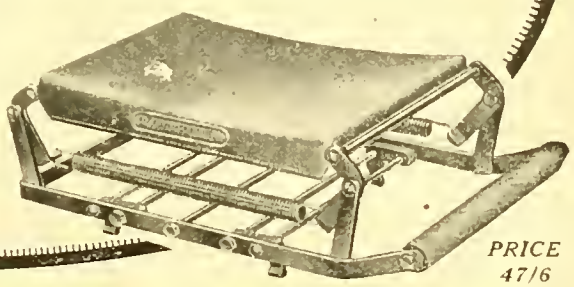
Introducing The

Townshend

PILLION SEAT.



THIS is the Seat you need.

It completely solves the problem of perfect Pillion riding. Scientifically designed to assure maximum comfort and safety, it has a substantially-made frame of particularly handsome build and finish. No sharp corners or projecting metal edges. Well padded seaped Seat on stout metal base. Very strong, double-action Clip fastening. Fitted on any carrier in 3 minutes.

The spring-action is through rocker arms at each corner on strong lateral springs, the whole seat moving vertically ONLY, hence NO-END—OR SIDE SWAY. NO-BOUNCING OR BUMPING is possible, and all danger of steering-wobble is eliminated. No moving parts to pinch the fingers. Handle at rear for passenger's assistance, and for lifting machine on to Stand. Send for fuller particulars. Obtainable of all Dealers and Garages.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

☞ DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, ½%. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

ENGLEBERT TYRES

Super-reinforced

The cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make. These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "best out of them."

Whatever tyre mileage you are satisfied with, these tyres are "good for more."

The 1921 Tourist Trophy Races.

IN any review of last-week's T.T. races the outstanding feature was the success of the rider of a Junior 350 c.c. machine in the Senior 500 c.c. class. Such a result was little expected in most quarters, though the fact of last year's Senior winner's time being handsomely beaten in the Junior race on Tuesday of last week foretold that Senior mounts would be hard put to it to equal the fleetest 350 c.c. machines. Many consider that the 500 c.c. machine is at a disadvantage on such a tortuous course, and that the race is not won on sheer speed on the level, but upon corner work. Be that as it may, the winner was in no sense a reckless rider, and, possessed of a mount which held the road magnificently, he was able to prove what we suggested after last year's Senior race, viz., that the present limit of 500 c.c. might reasonably be cut down to 350 c.c., Junior machines to 250 c.c., and genuine lightweights to 200 c.c. without loss of speed. After all, as we have long argued, if we gain anything by the T.T. it is in efficiency from a given capacity, and instead of piling on weight to cope with the increased speed attainable, and producing heavy solo machines (some scaled over 300 lb.), the natural course seems to be gradually to continue the restriction of engine "c.c.," and so gain the advantage of greater engine efficiency by *reducing weight*. Many question whether the ideal solo mount is a machine of 80 m.p.h. calibre scaling 300 lb.; yet that was a fairly common specification of Senior machines. Speed is only of real value when opportunities for its employment are available.

After all, when a 350 c.c. machine is capable of winning the Senior event, the Tourist Trophy races are well on the way to attaining their real objective, and, since the Isle of Man course may be considered as typical of average British road conditions, it is unlikely that the solo tourist will require more speed or power than is provided by the modern 350 c.c. engine.

Single-cylinder Engines.

This year, overhead valve single-cylinder engines scored decisively, but in saying this and without any desire to detract from the Senior winner's performance, certain 500 c.c. side-by-side valve machines which came within an ace of winning the Trophy failed from reasons of ill luck. According to the winner, his maximum speed was about 73 m.p.h., yet it is known that Senior machines in the race were capable of 80 to 85 m.p.h. It is the uncertainty of a non-stop run in such a long distance event which vests so much interest in the T.T., and in this connection it is significant that in the Junior race of five laps, thirty-eight of sixty-five starters survived the course, whereas in the Senior event of six laps, only twenty-four of sixty-four starters completed the course within the allotted time. The efficiency of modern single-cylinder engines is remarkable. In the races they greatly outnumbered twins. Such considerable strides towards the lightening of reciprocating parts have been made possible by recent research, that one of the main disadvantages of the single-cylinder engine has been dissipated, since considerations of strength and rigidity render it difficult to produce pistons and connecting rods of equivalent relative weight for very small twin or multi-cylinder engines. The first 350 c.c. twin occupied twentieth place in the Junior race, and the first 500 c.c. twin (a two-stroke) was seventeenth in the Senior event.

Three-speed countershaft gears were the rule on the machines of the leaders, yet it cannot be overlooked that a machine which for four laps made the fastest circuit had but two speeds, and was checked by temporary trouble on the two remaining laps. Chain drive is, of course, now firmly established as the best form of drive for fast motor cycles, and in the Senior event every machine was thus equipped.

A technical review of the races will be found in another part of this issue, and also a graphic description of the Senior event.

An Index to the advertisements in this issue will be found on page 62

Occasional Comments

The Value of Racing.

YES, it is certainly true that the T.T. costs a mint of money, and that in the final issue every half-penny of the cost comes out of *our* pockets. But just as racing developed the British 500 c.c. machine—the world's best general utility machine—so the Junior T.T. is ultimately going to provide us with a roadster machine which will be handier than the 3½ h.p., and cheaper to buy, without being any slower on the level or any weaker uphill. The proof is that in 1921 the A.J.S. covered five laps in less time than four laps occupied twelve months ago. This is intensive culture with a vengeance.

F.I.C.M.

THE International Federation of Motor Cyclists has a rule that events held under its regulations must be open to all nations. So ex-enemy stuff was not barred in the T.T. There was precious little of it about, but one rider still treasures a pair of pre-war Bosch plugs, which have long been the apple of his eye. The massed battalions of plug manufacturers could not bully-bribe or argue him into a change. So he was the only starter who used German plugs. Presently he fell by the wayside. Eagle-eyed emissaries of British firms side-stepped the marshals to inspect the derelict machine. Great was the glee when one of the Bosch plugs proved to have given way in lap one to a British article.

If the Island Went Dry?

THE T.T. is an event which suggests—and generally receives—a certain amount of celebration. The Island has always resembled Thrums in that its population includes a large percentage of the unco' guid. There are rumours—*horrid* rumours, as most motor cyclists regard them—that the Island may go "dry" before 1922. In fact, one eminent member of the trade is already designing a petrol tank with a false bottom, so that he may take over his whisky ration if all the Manx bars close down. Others are discussing the possibility of a new course somewhere else, and at least one crack rider says he would rather T.T. in Ireland with the risk of bombs and chessboard holes at every hairpin than put up with lemonade at his pit in the third lap. I don't think there is any real fear. Some of the Manx folk have their prejudices, no doubt: but at least they all know how to tempt us over there, and how to denude our pockets on arrival. The Island will *not* go dry: but if it does, the dryness will continue to display a suspicion of moisture in T.T. week.

The Singletons.

IN the Junior T.T. there were eight solitary representatives of eight different makes. Two failed to finish, but all honour is surely due to the following singletons:

7th. W. Howarth (Dot-Jap).
19th. G. Browne (New Scale).
22nd. N. Black (Omega).
24th. S. F. Haden (New Comet).
38th. G. W. Jones (New Hudson).

H. G. Hawker completed the octet, but never went to the Island.

Average Speed.

I WISH some first-class rider would do a lap of the Manx course with a recording speedometer fitted, giving a graph of his speed variations, like those Negretti and Zambra—barographs, do they call them? For example, Howard Davies laps at just over 55 m.p.h. He does a few yards at 5 m.p.h. round Ramsey hairpin and Governor's Bridge, and slows to 20 m.p.h. momentarily at many lesser curves. What does he touch in the mad drop off the mountain—80 m.p.h. or more? What is he really doing at Ballacraine, at Craig-na-baa, at Hilberry? It would be extremely interesting to have a full graph of the actual speed variations which go to compose a fastish lap. Will somebody please carry out this stunt next year?

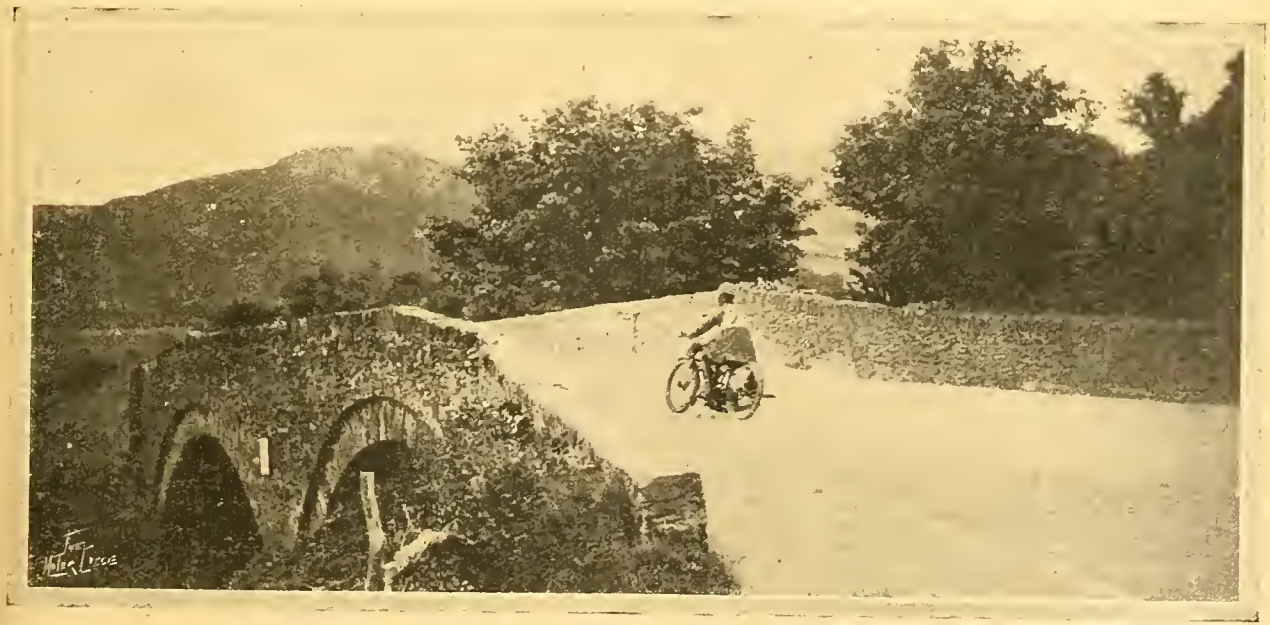
The "Oil Pump."

MOST machines in the Island get a *sobriquet* of sorts, generally abusive and sometimes positively improper. The nicknames are taken in good part, and the Wooler is rather proud of being hailed as the "Flying Banana," while the Sun Vitesse, being remarkable for its engine balance, answers to "St. Vitus" without protest. But a certain sparking plug maker persisted with marked venom in alluding to a nameless machine as "that blinking oil pump." I

Occasional Comments.—

questioned him. "The darned thing smokes like a gas attack. There are umpteen of them entered. Every man jack of them intends to carry ten spare plugs in the race, and they think they are fast enough to change two plugs a lap and win. I don't mind giving plugs by the dozen, but when it comes to grosses . . . !"

An Anti-motorist.

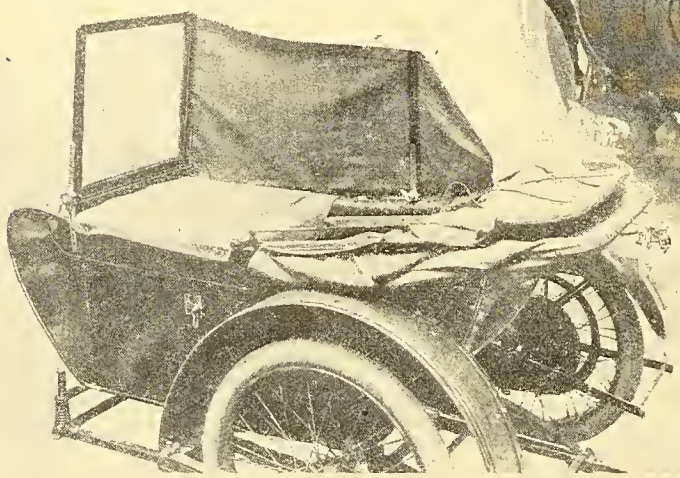


ON the Princes landing stage at Liverpool there is a veteran porter of some seventy summers. One of his jobs this year was to embark a 7·9 h.p. Harley without assistance. There was a 10in. step up on to the gangway. He stubbed the front wheel against this step, found the machine had become immovable, and sought relief by waggling the gear lever. Thus, he got the Harley into bottom gear on full compression against the step. Behind him a crowd were fighting to board the *s.s. Mona*. Before him a bevy of blasphemous porters were struggling to get down the gangway for fresh loads. Our elderly friend is now a rabid anti-motorist.

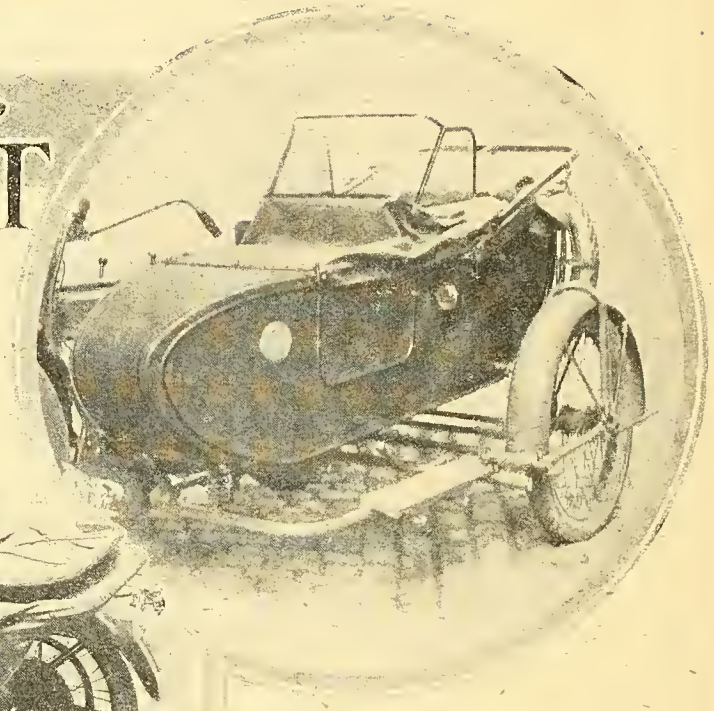
On a Rudge.

I MAKE it a point every summer to wangle a really long run on either a Rudge or a Zenith. Sidecars or trials' secretaries have driven most of us to accept the chain drive and the double figure gear ratio as our ordinary nourishment. But we still have the sense to recognise that for solo work in country where hills are hills (and *not* gymnasia for training young chamois), the infinitely variable gear with the belt drive knows no rival. So last week I borrowed a Rudge, and ripped off 150 miles across country in one piece with infinite relish. Non-stop, of course. My one complaint was that the 500 c.c. Rudge has grown so hearty of late years that in an ordinary English county a solo rider does not really need the gear lever at all—you can romp up anything you meet by a touch of the throttle. It *is* a nice 'bus. A pal has offered me a heavy wager that I will not get a gold on it in the English or Scottish Six Days. I am half inclined to take it on. If the present gorgeous weather were likely to last, I am sure I would risk my money. But I hear that Secretary Loughborough is mapping out routes in Devon, and, as for the Scottish—well, some of us know what Applecross is like in pouring rain. So perhaps I would feel safer on something heavy with a chain to it, and one of those beastly but inevitable competition gear boxes with a low ratio of about 22 to 1.

Comfort First.



THERE is probably no feature in which various makes of motor cycle are more differentiated than that of comfort. I have recently been carrying out some private tests on the point. I began by selecting a car with good springing and approximately the same maximum speed as the average 3½ h.p. motor bicycle. A route was then laid out which included surfaces varying from superb to atrocious, and a typical assortment of straights, corners, and gradients. The car was then sent over the route in the hands of a driver who was instructed to go as fast as was (1) safe and (2) comfortable. Three separate makes of motor bicycle were sent over the same course under similar driving orders, no watches or speedometers being carried on any of the four vehicles. An almost identical average speed (rather a high one) was recorded by the car, by a spring framed motor bicycle, and by a motor bicycle with 3in. tyres. The fourth machine, which had a rigid rear frame and 2⅜in. rear tyres, was 7 m.p.h. slower over the course than the other trio, and its rider complained on arrival that a legal limit average would be grossly uncomfortable over the course on the machine in question.



Although Sulby Bridge is one of the most picturesque spots on the course, greater interest attaches to this picture because it depicts J. Whalley (2¾ Massey-Arran-Blackburne), the "hard luck" man of the Junior, on his fourth lap, and still holding a leading position.

SIDECAR COMFORT

Modern Sidecars and their Screens and Cushions discussed from the Passenger's Point of View.

(Left) A screen and side curtain arranged to provide full protection from draughts on a tandem-seated Grindlay sidecar.

(Right) This Matchless outfit has been ingeniously equipped with two screens—a Bluemel and an auxiliary screen which is concealed under the apron.

SIDECAR owners appear to be divided into three distinct classes: those who appreciate the requirements of their passengers and provide for their comfort, those who do not, and the inexperienced.

The first group requires no reminder regarding the many little points which so add to enjoyment of the pleasures of the open road as a sidecar passenger, and the number of *de luxe* outfits in commission nowadays indicates that this class is in the majority. The inexperienced may learn by observation how to provide that comfort enjoyed by such a large number of sidecar enthusiasts.

On the other hand, the second category of sidecar owners may require weaning from the idea that they owe to their passengers more than is provided by a sidecar body, a chassis, a wheel and an apology for a cushion.

A 'Busman's Holiday.

Actual experience is more convincing than argument. The sidecar driver whose usual passenger is less enthusiastic than she was wont to be should undertake a long journey as passenger in his own sidecar. If a passenger has complained of undue fatigue at the end of a journey, has a pain in the nape of the neck or the shoulder, or is subject to headaches, something is at fault, and something which usually can be remedied. The driver who takes a 'busman's holiday will discover these things—discomforts which perhaps his passenger has suffered unnecessarily, in silence and perhaps in ignorance that all sidecars are not alike.

We will imagine a fast machine equipped with a light sidecar which has been produced without full consideration of the service it is intended to fulfil. Probably the motor cyclist on his 'busman's holiday will discover that the body is a little too narrow and, perforce, he is compelled to use the "topsides" as arm rests, in which case it may be found that the seat is a little too low—a combination that produces at least three distinct discomforts. First, the arms have partially to support the weight of the body, and after a journey over indifferent roads, one suffers from that stiffness such as experienced after unaccustomed exercise in a gymnasium; secondly, with arms "abimko," it is almost impossible to use the rear cushion as a back-rest; and thirdly, should it rain, the elbows are "out in the wet."

The Position of the Sidecar Cushion.

The remedy is obvious. A wider body is desirable; but no doubt the majority of those possessing such sidecars will prefer to render the existing body more comfortable. In this event, much benefit will accrue from a little patient experimenting with different heights and angles of the seat cushion.

Owners of single-cylinder machines who have submitted themselves to the test as passengers no doubt will have been impressed by another form of discomfort, *i.e.*, the noise of the exhaust. The bark of a healthy engine heard by the passenger is a very different sound from that which the driver may have enjoyed.

If the 'busman's holiday be undertaken on a day when rain is encountered, the passenger *pro tem.* will

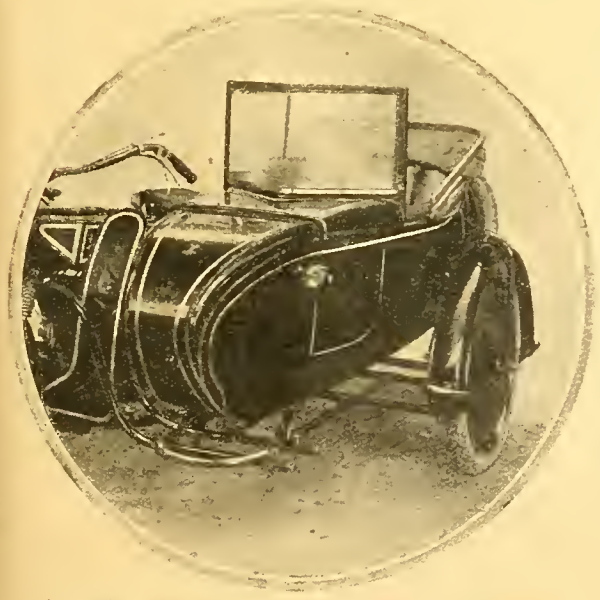
Sidecar Comfort.—

find that the rain that beats in his face as a driver is nothing compared with the stinging mixture of rain and fine grit which is thrown into the passenger's face when splashed up by the front wheel.

One such trip should convince the temporary passenger that a windscreen, which he may have regarded as a speed destroying luxury, is an absolute essential. He should bear in mind that all cars—even semi-racers—are fitted with screens; yet the occupants of a car are very much higher from the ground and further away from the wheels than the sidecar passenger. It is interesting to know that *The Autocar* considers that a screen for the rear seats of a four-seater is as necessary as the driving screen in front.

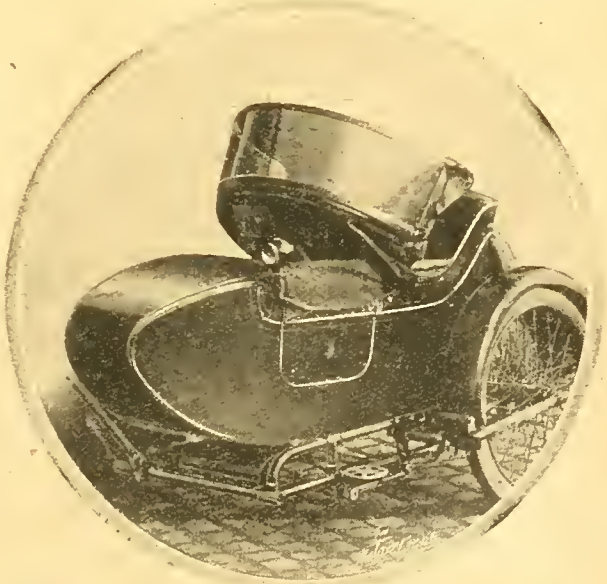
Of all the types of windscreens available for fitting to sidecars, the least serviceable is that which is merely a pane of glass or celluloid in a rectangular frame.

Especially is this the case when it is placed too far forward. This type, however, can be made to provide the necessary comfort if it is fitted with a side screen of hood material, which should be more than a triangular curtain from the top of the screen direct to the sidecar. The method shown in the illustration (of the Grindlay sidecar on the preceding page) indicates how a side curtain should be fitted in conjunction with a square screen placed well forward—as it must be where a child is carried in front of the adult passenger (unless two screens are used).



T. Weaver, who has demonstrated the power and reliability of the modern 2¾ h.p. sidecar outfit. His mount is a Verus, and he survived a recent strenuous two days' trial without loss of a mark.

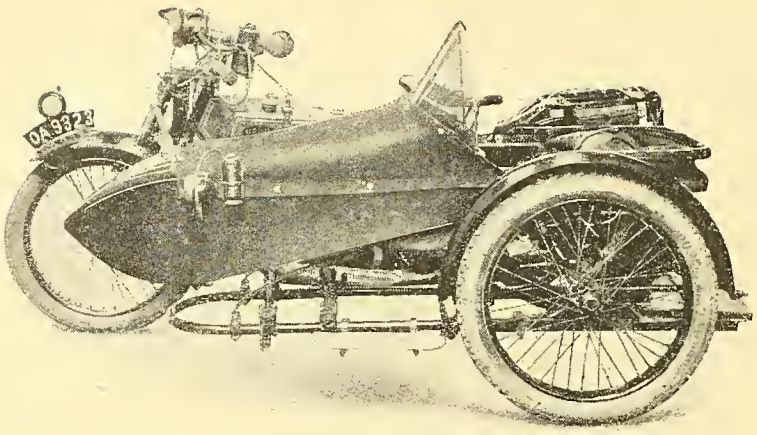
Members of *The Motor Cycle* staff have used two screens with success, and one of the best arrangements has been found to be a small rectangular screen at the fore end of the well, to protect the juvenile passenger, and a Bluemel screen for the rear seat. One of the illustrations on the previous page depicts a Matchless family sidecar so equipped. When the front seat is not in use the forward screen is placed in a horizontal position under the apron.



The Bluemel screen is constructed of steel and celluloid and has side wings which eliminate the necessity for a side screen, as *the main screen can be adjusted* as desired, both in its height and its "fore and aft" position. The latest model is an excellent fitment in service and neat in appearance, large enough for the most commodious sidecar, and yet not out of place on a body of the sporting type.

The Royal model Easting screen is another fitment which should be carefully considered. The comfort provided by this type of screen is now well-known to many thousands of motor cyclists, but all are not cognisant with the latest model, which is carried on rods pivoted at the forward end of the sidecar, so that access and egress are greatly facilitated. The Easting can also be used in lieu of a hood by tilting it well back over the passenger's head. A small window is fitted in the apron.

We have mentioned before that the forward position is not ideal for a glass screen, and several makers now



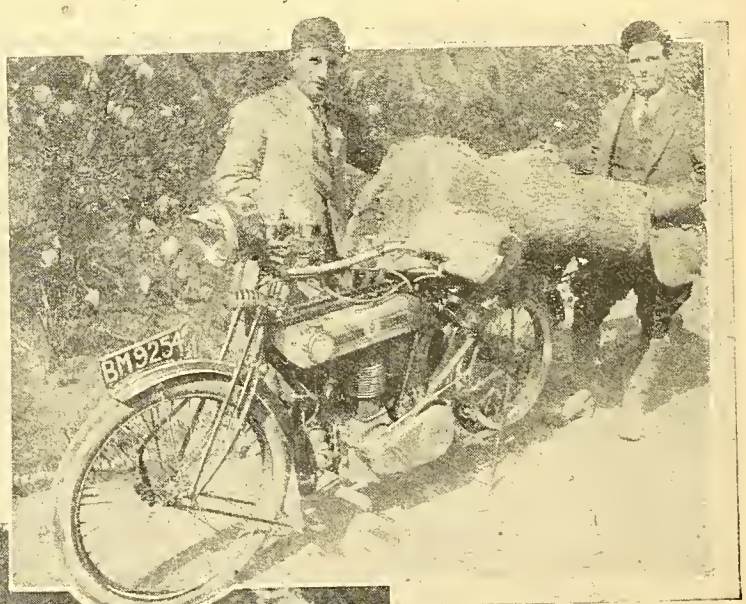
A graceful design of V-fronted screen mounted on the hinged dashes of the 8 h.p. Excelsior outfits.

When the Royal Easting is used as a hood, a small mica window in the apron takes the place of the transparent screen.

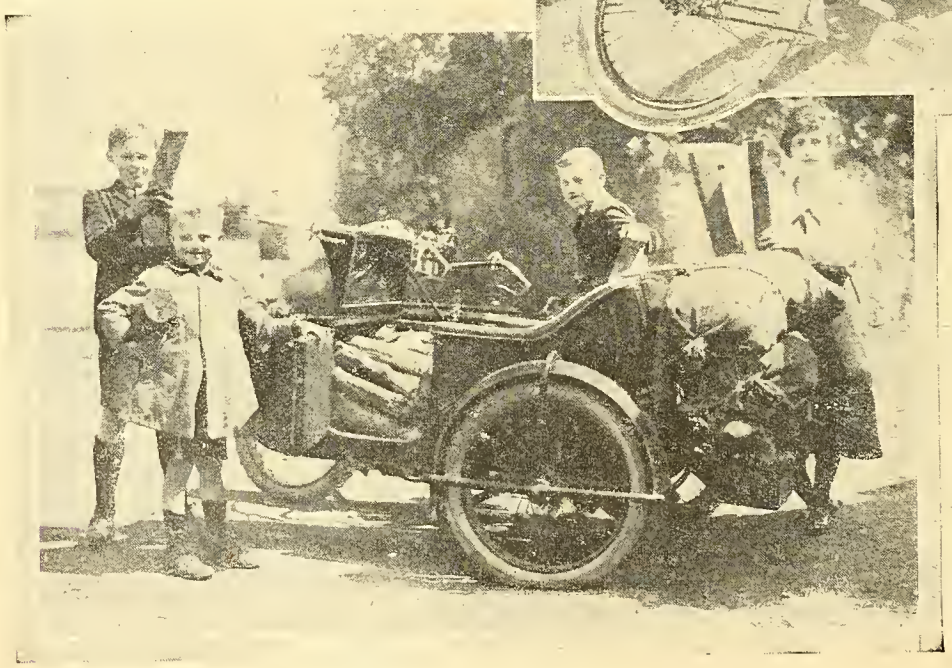
Sidecar Comfort.—

A small sporting sidecar, possessing all the refinements of the leading heavier models—the 2¾ h.p. Verus-Canoelet.

market machines with screens fitted on a hinged dash. Notable among these is the A.J.S., where, however, it has been found advantageous to fit a small side curtain. In fact on the latest model, the manufacturers offer a side screen of celluloid.



The 8 h.p. Excelsior outfit screen has been developed a little further. Not only is the front screen fitted to the hinged dash, but it is V shaped and has a side screen incorporated.

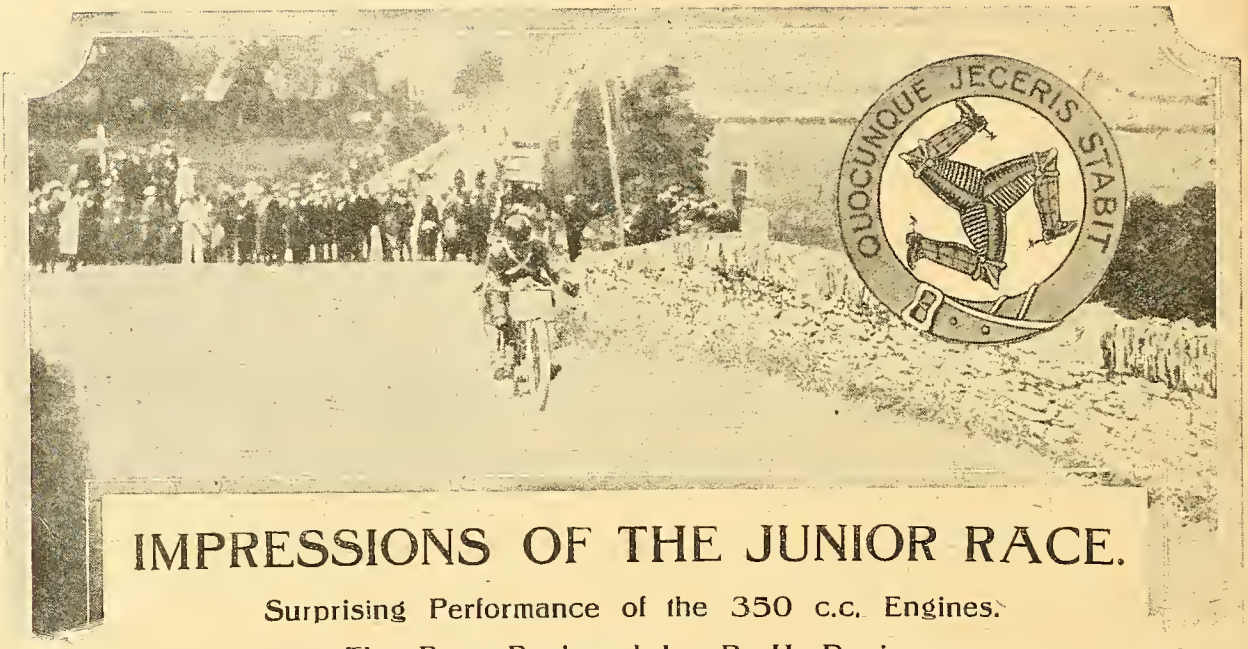


Even the smallest sporting sidecar needs a screen, and some owners go so far as to fit a hood. One of the best equipped sporting sidecars we have seen is illustrated. It is a Verus-Canoelet, a sidecar particularly suitable for use with such machines as the Verus and other 2¾ h.p. Blackburne engined mounts. It will be noted that it is fitted with a step, a luggage grid, and a hood and screen.

Incidentally, the lightweight sidecar outfit is becoming more popular every day, for such is the power of the average 350 c.c. engine, that machines so fitted are found quite suitable for serious touring. As an example of this, we may mention that a three-speed 2¾ h.p. Verus and sidecar survived the recent Two Days Trial of the Birmingham Club without the loss of a mark. This, too, is not an isolated example of what can be accomplished with the lightweight sidecar.

The question of weight is a vital one. But as the power - weight ratios of engines are decidedly improving, refinements may be added to the sidecar without unduly burdening even the smallest engine.

Finally, it should be remembered that not always does such a fitment as a windscreen slow a machine. Very often the reverse is the case.



TO KEEP THE HOME FIRES BURNING!

(Left) Every little helps. An A.J.S. sidecar is pressed into service for the conveyance of the domestic fuel.

(Right) A case where the "willing horse" was badly abused. It need hardly be stated that this load was not conveyed under power to its destination.

ATTITUDES AND EXPRESSIONS.

IMPRESSIONS OF THE JUNIOR RACE.

Surprising Performance of the 350 c.c. Engines.

The Race Reviewed by B. H. Davies

WE have had more exciting spectacles than this year provided in the Junior T.T., but we have never had better cause for congratulation, or more food for thought. The race is a regular sermon preached to the trade, the rider, the press, the engineer, the financier, and the advertising expert. Unlike the average church sermon, it will not send its auditors to sleep.

Text No. 1 is the power of a sound technical brain. Ten firms enter for the 350 c.c. trophy. One of them triumphantly annexes six of the first eight places on the list, though the other nine unquestionably had the will to win if they could. It follows that text No. 2 is the value of prolonged preparation. The A.J.S. people got their small single out in a hurry for the 1920 race, and snatched a lucky victory by the skin of their teeth, after a series of smashed vital parts. By 1921 they have "summered and wintered" the 'bus, as they say in Sussex, and consequently prove invincible. By 1922 some of their leading rivals will have had time to develop full stamina, and to polish up a little more speed. Then we may see a real race, and not a walk over.

Unprecedented Reliability.

Third in point of interest I set the miraculous reliability of the machines. The stay-at-home student may fail to see anything very marvellous in the fact that thirty-eight machines completed the course out of sixty-five starters—a percentage of fifty-eight. I am writing away from my files, but I cannot recall any race—car or cycle—which produced such a fine percentage of finishers. I never saw the huge A.C.U. scoring board so packed with lap times from end to end and from top to bottom. In an international motor car race nobody is surprised if only 30% of the starters complete the distance. This splendid record of 58% reliability at record speeds over a vilely dangerous and difficult course has been achieved by what one may call the Ugly Duckling of the motor cycle world, *i.e.*, the tiny machines which until recently were the butt and the bugbear of most practised riders. Even to-day Great Britain is the only country which takes them seriously.

One Hour Faster than Last Year.

Next in order we must digest the phenomenal speed of the race—roll it on our palates and scent its aroma like a good wine. One solid hour faster than last year! Fifty-two miles an hour—and, at that, the winner did not open out till after the half distance, and was possibly not the fastest man in the race! A Junior record lap of 41m. 4s., when the previous Senior lap record put up by that king of speedsters, George Dance, in 1920, was no better than 40m. 43s.! This record means over 55 m.p.h. round a course which has been likened to a skein of Berlin wool after an eel has had an epileptic fit in it. It is hard to say whether the sheer achievement of such speeds from a 350 c.c. engine or the astounding acceleration of a whole hour over five laps within twelve months is the more amazing feature. Nor must the 2¾ h.p. machines be allowed to overshadow the babies. Prentice's New Imperial is not a member of the medium roadster class like the 2¾ h.p. Douglas and others which have long been welcomed in the Tourist fraternity. It is a beggarly little 249 c.c. Its weight only just topped the 200 lb., and in averaging better than 44 m.p.h. it had to clamber up the seven-mile ascent out of Ramsey. We shall have to watch the 2¼ h.p.: it may yet loom as large in the industry as ever the 3½ h.p. has done. The one unalterable demand of the motor cycling public is a certain minimum performance in respect of speed and climb. Give them that. The less the machine weighs, the less the machine costs to buy and to run, the better most of them will be pleased.

In estimating the high factor of reliability displayed in the race, we ought not to overlook the petty items

Impressions of the Junior Race.—

which are regarded as mere accessories to an engine—a gear box and a dashing rider. Take tyres, for example. Tyres are often mentioned by astute riders to camouflage some mechanical trouble, so that a tale of tyre trouble cannot always be taken at its face value. Still, this year's Junior affords a very good demonstration of tyre quality. The roads were unusually dry and flinty. The speed was phenomenally high. Yet only two men encountered serious tyre disasters. Howard Davis was possibly deprived of victory by a puncture. Whalley was decelerating as the race progressed, so it is probably fair to say he lost second place rather than victory through a puncture. But there were 130 covers in the race, and well over 100—possibly over 120—of them stood the racket nobly. Or take another accessory—plugs. A plug expert told me he never feels any anxiety about plugs at Brooklands where full speed is sustained, but that he considers the Manx races are an acute problem with the ever-varying speed, frequent cut-outs, and so on. Yet the lap times prove that a good modern plug will stand unlimited heat, plus unlimited oil.

Turning to the actual incidents of the race, I frankly admit that my fullest sympathy goes out to Howard Davies, although after his Thursday's triumph he probably does not want much! I set out the lap times of the three men who had some chance of winning.

	Eric Williams.			H. R. Davies.			J. Whalley.		
	H.	M.	S.	H.	M.	S.	H.	M.	S.
1st		44	0		41	29		42	16
2nd		43	38		55	6*		43	19
3rd		44	20		41	20		45	41
4th		42	51		42	11		44	41
5th		42	34		41	4		56	42*
Total ...	3	37	23	3	41	10	3	52	59

*Tyre trouble on these laps.

Now, if we credit Davies and Whalley with five laps covered at the average speed of the four laps in which they did *not* puncture—41m. 31s. per lap for Davies, and 43m. 59s. for Whalley—the first three riders would have been:

	H.	M.	S.
1. Davies	3	27	35
2. Williams	3	37	23
3. Whalley	3	39	56

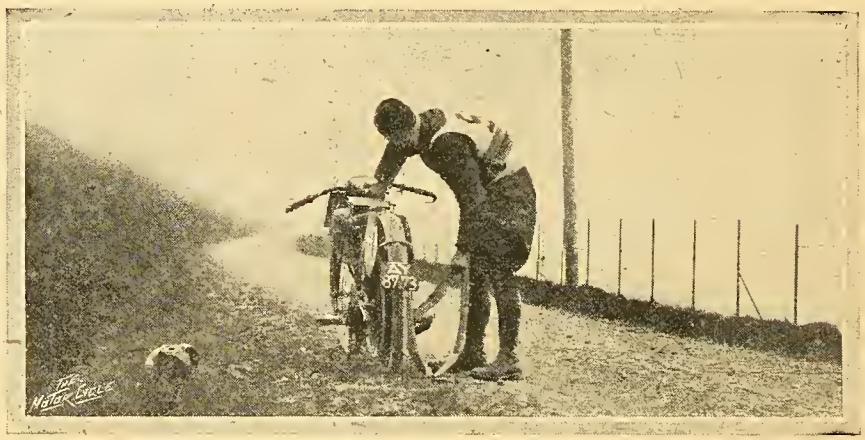
These conjectures are pure "hot air," in a sense, but they suggest that Davies was genuinely unlucky not to win, for his four non-stop laps averaged over 54 m.p.h. Whalley was also extremely unlucky, but he was not robbed of an easy victory by his fall. Moreover, if he had won, the Massey-Arran luck would have been incredible—to score at the first essay, with a proprietary engine fitted to a new 'bus, and ridden by a man secured by a fluke on the eve of the race! I hope and expect to see Whalley win a good race in the near future when luck serves him better: he is a rider of the extremely select, top-notch class. Incidentally, the times indicate what a positive chasm divides the crack rider from the ordinary man. It is as impossible as it would be unkind to identify all the men who enjoyed non-stop runs: still more so to name those who might have had five non-stops if they had done nothing silly in the way of machine control, engine control, gear control, or oil management. But it is no exaggeration to say that a rider like Howard Davies could give ten minutes per lap to a good many racing men, even if they were mounted on machines as good as his own. He can give two minutes a lap to anybody outside a very select coterie, whose names will occur to my readers; and he could give twenty minutes a lap to many amateurs who have carefully built up small local reputations as speedsters.

Turning to the babies. I hope my good New Imperial friends will not feel hurt if some of us almost wanted

J. Joynson (2¾ N.U.T.) on the Gooseneck—one of the dangerous twists of the course. At this point it was most interesting to watch the various styles of cornering adopted by the riders.

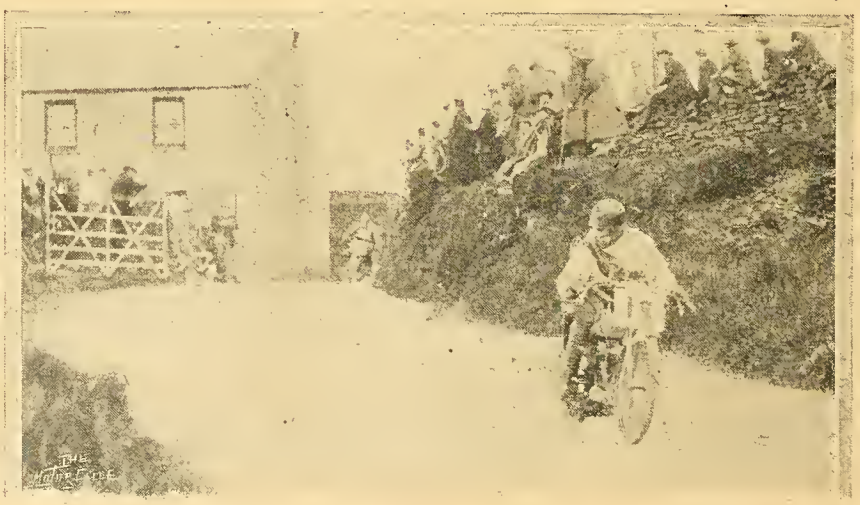
Impressions of the Junior Race.—

the Levis to head the lightweight class, just for the sake of auld lang syne. The Butterfield brothers were almost the only men in England who believed in the tiny engine through thick and thin—they are very largely responsible for the fact that a "flyweight" class exists. Poetic justice would have been satisfied by a Levis victory. Still, their turn may come again, and the New Imperial-Jap performance was certainly hot enough for anything. It is not many years since the fastest lap in the Senior was under 50 m.p.h., and a 250 c.c. New Imperial ridden by Prentice in 1922 will lap at 50 if he gets a non-stop. The Velocette toyed with the Six Days Trial last year, and, like Alexander (the great, not "Duggie" or "Alfie" or "J.R."), is now sighing for new worlds to conquer. It could not quite conquer this this year, but it finished three machines out of four, and the trio's joint average approached 42 m.p.h. Good enough, eh?



Cornering.

Some observers found the cornering disappointing. I feel nothing but a vivid dislike for the ghoulish type of spectator who goes to Sulby or the Governor's Bridge with a sneaking hope of witnessing a bad crash. My own judgment is that the corner work was superb. Take Governor's Bridge as a sample. The men approached the first angle of this terrible Z very fast. They slowed down so accurately that the machines practically came to a standstill at the point of the wall, so that they could be wrenched round in their own length. In the getaway for the C bend which follows, they were deceptively fast, judged by the roar of their engines; they were lying over at a steep angle with the wheels only a few inches from the gutter all the way round. In other words, there was just the perfect combination of dash and restraint.

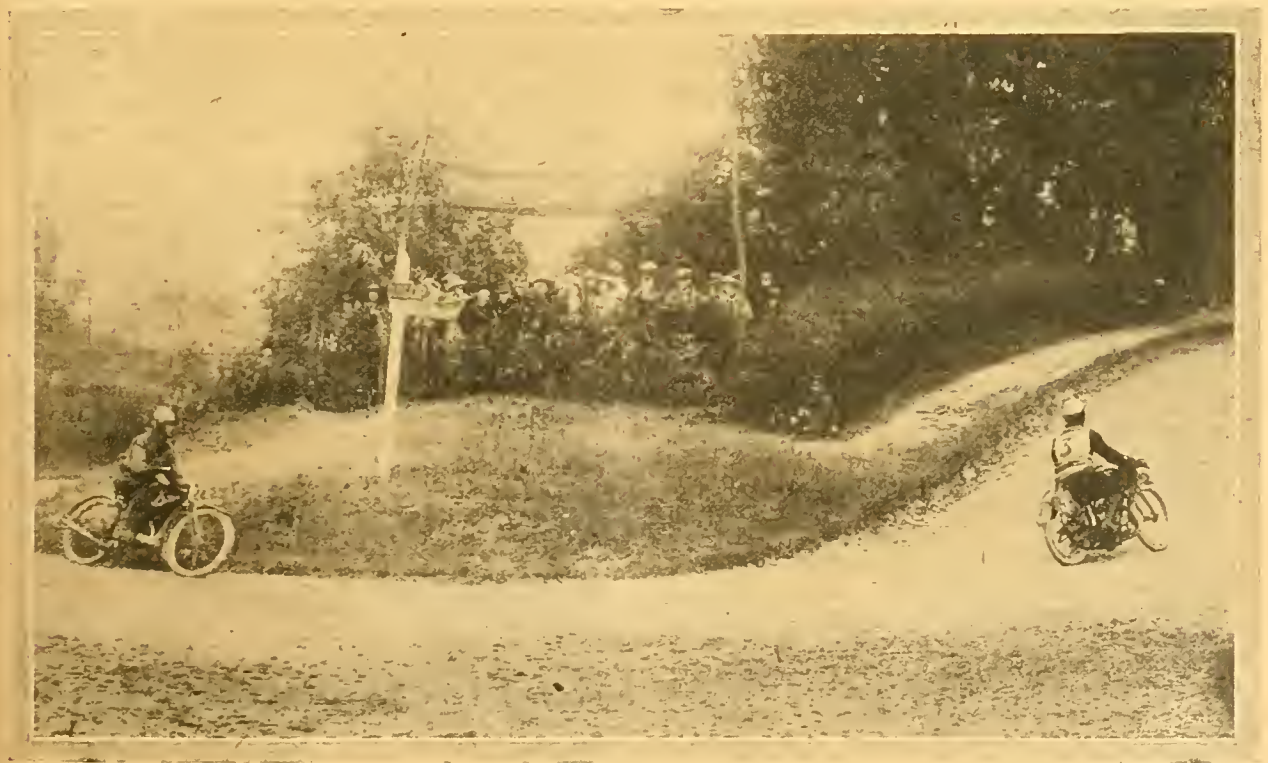


The Douglas *débacle* was naturally the chief disappointment of the day. We trusted them to threaten the A.J.S. monopoly, and make a real breath-catching race of it. They had five machines, all ridden by good men,

Lined up for the start of the Junior race—for the competitors, a most trying half-hour, reminiscent of waiting for "zero" or the dentist's ante-room.

——!——!! Our photographer did not report what H. Petty said when the rear tyre of his 2¾ h.p. Coulson went flat. Only those who have suffered in similar circumstances can fully sympathise with the victim.

Looking back—but why? Apart from the danger of the practice there is a superstition that it brings bad luck. Possibly W. J. Lord (Hobart) is wondering what would happen if Kepple Gate were to swing shut!



Impressions of the Junior Race.—

and their two finishers could do no better than twentieth and thirty-seventh. In South Africa there is a thorn bush called "waacht ein beetje," or whatever is the Cape Dutch for "wait a bit." It expresses the mood of the Douglas camp. They have been so frightfully busy since the war that they started preparations for the Junior rather too late. In plain English, they had a thumping good Junior engine, but they had not got a Junior frame. So the eager little engine had to be dropped into a walloping Senior chassis, and was set to pull over 280 lb. up the mountain. Remember the thorn bush when 1922 comes round.

"Subsidies."

It is perhaps hardly my province to mention one rather objectionable feature of the secret history of every T.T. race, but it deserves a line or two, because it is a great nuisance to everybody except the riders, and is liable, under certain circumstances, to hoodwink the public. I refer to the eternal chaffering in which most riders indulge with regard to the equipment of their machines. The fact that—let us say—Spuggins's split pins were used on the victorious machine is a useful advertisement to Mr. Spuggins. So he and the other manufacturers of split pins—Muggins, Buggins, and the rest—bid against each other for the custom of the various riders. So it comes about that the more mercenary riders are perpetually bargaining and changing—let us say—their make of tyre lever or tank enamel until the last moment allowed by the rules. It follows that these subsidies allow a quite undistinguished private rider to make his expenses and a bit over, whilst the winner, if he be a smart man of business, might conceivably net four figures. The A.C.U. is doing its best to repress the business by compelling equipment to be specified in advance. I dislike it, because—well, if I happened to manufacture a second-rate belt or chain or plug or tyre or magneto, and had sufficient capital at my disposal, I might get my wares on to nearly every machine in the race, and so create a wholly false impression. Up to the present no harm has been done. No firm has exploited the system to fob off a bad article on the public. This does not alter the fact that the system is rotten. This system helped to kill British magnetos in pre-war days, and will always ensure the failure of any novelty which does not enjoy heavy financial backing.

In conclusion, no firm in the trade need begin to regard the Junior T.T. as the private preserve of the A.J.S.—a kind of walled-in park, with "Trespassers will be prosecuted" placarded all over it. Give the A.J.S. full credit for three successive wins. But if the tin-tack—or whatever it was—which checked Whalley on his fifth lap had elected to afflict Williams instead, the race would have been won at the very first time of asking by the Massey-Arran—a machine of which very few have been made: a fine engine, but one which anybody can buy in duplicate on the open market, and an amateur rider picked almost at random. It follows that the A.J.S. team—though formidable—is not invincible. Several concerns mean to set it a tough proposition in 1922.

A SCENE IN THE JUNIOR RACE.

G. Prentice (2¾ h.p. New Imperial-Jap), who won *The Motor Cycle* Cup, and E. A. Jacob (Coulson), who successfully completed the five laps, cornering well at the Ramsey Hairpin.

Technical Aspects of the Junior T.T.—

the 250 c.c. class to the efficiency and easy change of their gear box; and the new light Burman three-speed (which was fitted to Whalley's Massey-Arran) appears an admirable job. Certain manufacturers experienced considerable gear box trouble during practice, but overcame these initial worries before the race. Douglases and Scotts used four-speed gears, though the gear on the latter machines was used as a three-speed, since two of the ratios were very close together.

Perhaps the most notable two-speed entry was that of the Triumph Co. Their own two-speed box is an admirable piece of work, and the wonderful slow pulling and acceleration of the overhead valve engine compensates for the lack of the third ratio; while the performance of the side-by-side valve engine in putting up a lap in 40m. 8s. does not appear to indicate any loss from this cause.

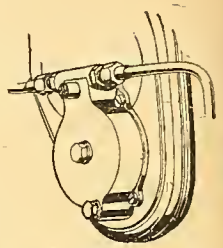
Frames.

Only two new frames made their appearance in this year's races—the T.T. Scott, with its cleverly-arranged triangulation and its detachable sub-frame carrying engine and gear unit; and the sloping frame (giving an extremely low position) of the new B.S.A. As regards breakages, frames seem to have made considerable strides, but more than one manufacturer has discovered that where high speeds are concerned there is more in designing a good steering machine than good forks and low centre of gravity. This lesson, taught by the general increase in speeds, should prove valuable, and it is to be hoped that those manufacturers who encountered steering troubles (in spite of the fact that the best known principles of frame design were embodied) will continue their experiments for the good of the trade and the motor cycling community at large.



Another noticeable feature was the fitting of auxiliary chain stays by Sunbeam and Velocette—a feature which is worthy of special consideration for maintaining lateral rigidity.

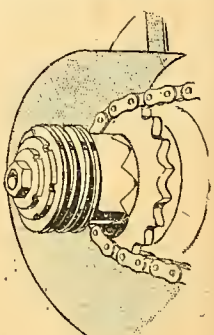
Part section of small K.L.G. plug as used on Levis and other machines

Carburetters.

Although the majority of entrants competed with standard types of carburetter, the Amac two-lever being the most usual, there are two points worthy of special notice. A.J.S. machines, as before mentioned, used an additional extra air on the engine side, and several riders, including the winner of *The Motor Cycle* Trophy, employed Cox-Atmos single-lever carburetters with admirable results. On the other hand, the Indian machines, usually fitted with a single lever carburetter, reverted to two levers for the T.T., and certain other automatic carburetters were fitted with a second control lever.

An oscillating oil pump on the Sunbeam magneto chain case.

Bearings and Lubrication.



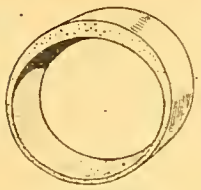
In view of the prevalence of ball and roller bearings on racing engines, it is interesting to note that, with the exception of a double row roller big end, the A.J.S. is a plain bearing engine throughout, which supports the contention that, provided the crankshaft is properly constructed, and that regular lubrication is ensured, there is but little friction loss with this type of bearing. Mechanical lubrication is making headway, Sunbeam, Rover, Velocette, and B.S.A. designers being amongst its supporters, and it is likely to make many more converts in the near future. In this connection, it is interesting to note that the Velocettes used just about one and a half pints of oil for the whole course, so regular and satisfactory is their pump. This fact also provides the main cause of the regular two-stroking, even down the mountain, of this fascinating little mount. Handle-bar or foot-controlled oil pumps are almost universal for racing purposes; and, until mechanical lubrication becomes standard practice, there seems no reason why touring machines should not be so equipped.

Flywheels.

With the exception of two-strokes and flat twins the Blackburne was the only outside flywheel engine in the races. Nevertheless, a proper realisation of the merits and defects of each type appears to be gaining ground. For instance, outside flywheels were kept as close as possible to the crank web so as to avoid torsional oscillation, and inside flywheels were given much greater clearances from the crank case so as to avoid oil drag—$\frac{1}{4}$ to $\frac{5}{16}$ clearance being given in most cases instead of $\frac{1}{16}$ to $\frac{1}{8}$. The Ivys had steel rims shrunk over the crank webs, which, in addition to raising the crank case compression, assist steady running by centralising the rotating masses.

Brakes.

Fewer auxiliary brakes were fitted than usual, but the Webb expanding front brake has made great headway, as it deserves to do, not only lightweights, but, in many cases, 500 c.c. machines being equipped in this way. Good brakes are vital to the security of the rider, and, in addition, save many seconds per lap by enabling corners to be approached at higher speeds. It is encouraging, therefore, to find that standard brakes were considered to be sufficient in so many cases. The A.J.S. expanding brake undoubtedly proved its value. Convenience was also considered in the design and position of the brake pedals—quite an important point.



The adjustable shock absorber on the engine-shaft of the 350 c.c New Imperial.

Technical Aspects of the Junior T.T.—

Tyres.

There was a noticeable increase in tyre sizes, 700 × 80 mm., 28 × 3in., 26 × 3in., and 650 × 65 mm. being common sizes; while only Levis, New Hudson, and Velocette machines remained faithful to 24in. wheels. Three ribbed and rubber-studded tyres divided the honours fairly evenly, and it was not uncommon to find studded tyres on the rear wheel with three-rib on the front, while the front tyre was occasionally of smaller section than the rear. This arrangement is probably ideal for the T.T. course, though the tourist naturally prefers interchangeable tyres.

Section of special Hutchinson tube in use in both Junior and Senior events.

Ignition.

K.L.G. plugs almost monopolised the entry, and it is a tribute to their excellence that so little plug trouble was experienced in spite of high compressions and oily engines. High-tension magnetos were universally employed, but it was noticeable that some of the small machines fitted a larger sized magneto for the race. Scotts were fitted with the Lucas two-spark instrument.

Congratulations.

In conclusion, it is clear that the Junior, Senior, and lightweight trophies were carried off by a combination of superb design and workmanship and exactness and care in tuning. The speeds which were accomplished, especially in the Junior event, were such an improvement over last year's as to indicate an enormous advance in motor cycle design and construction. Had the Senior event been run on a typical French course, with long straight stretches and comparatively few corners, the results might have been different, but in any case Messrs. A.J.S. are to be most heartily congratulated on designing and building what is probably the fastest road racing machine suitable for the British Isles. We may feel assured that the very valuable lessons which they have learned will be incorporated in their touring machines, and it is even to be hoped that the T.T. machine may be placed on the market.

OVERHEATING.

Is the Defect Misnamed? Heat, in itself, does not lessen Efficiency.

I HAVE two machines. One of them appears to get almost red hot—so far as actual temperature goes. It fairly sizzles! Yet this engine never overheats. It will haul a sidecar up the interminable passes of the Highlands, pulling better at the top than at the bottom. The temperature it attains is something colossal. I have seen flies drop dead in the air on approaching within a yard of it!

The second engine runs remarkably cool. One can hold one's hand on the cylinder without discomfort, yet after two miles of low gear work it pinks itself out—and that at a much lower temperature than the first normally runs at. In other words, one gets hot but does not overheat, while the other keeps cool and does overheat. A paradox surely.

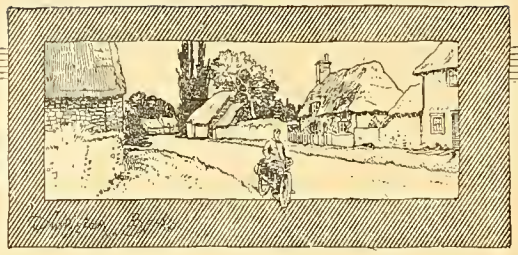
A Matter of Distortion.

This, I conclude, is purely a matter of distortion. The first engine "distorts evenly," the second distorts in such a way as to lose its compression—or at all events, to upset itself. Overheating, then, in the ordinarily understood sense, is not in this case so much a matter of attaining a high temperature as it is of the engine retaining its proper shape at the maximum temperatures it reaches.

One might argue from this that it does not very much matter of what metal cylinders are made so long as they are the right shape. If pre-ignition and excessive oil consumption could be washed out, a hot running engine would be every bit as good as a cool running engine. In other words, the only real reason why an engine should run cool is because we are accustomed to regarding motor cycle cylinders as such badly designed articles that unless they do run cool they warp out of shape. Make the cylinder symmetrical, and I venture to think that it would not matter a great deal whether it were made of aluminium or cast iron, or any other reasonably suitable material. Indeed, if it were possible to make the cylinder and piston absolutely symmetrical, the only advantage of aluminium or machined steel would be its lightness.

Why "Overheating" is Difficult to Cure.

My own experience, mentioned in the first paragraph, makes it easier to understand why "overheating" is often so difficult to cure. We may not be trying to cure overheating at all; we may be trying to cure warping. And since some engines begin to lose power through warping at a much lower temperature than others, it will be seen at once that under certain conditions no number of auxiliary radiators, etc., are of very much use.



Personally, I have adopted my old friend "Ixion's" tip, and find it very effective. When "Ixion" buys a new machine he flies at full throttle round the entire countryside, till his engine is absolutely and utterly blued. He then takes it home, and by dint of a coal hammer and a blacksmith's file he trues up the piston in a vice—a thing that "Ixion" might do, but which we would not recommend anyone else to try.

After the First 1,000 Miles.

With my own new machines I blue them in utterly during the first 1,000 miles, then return them to the makers, pointing out that the cylinder and piston are warped, and will they please have the engine machined up and trued, as the compression is rotten. This well and scientifically done, it is impossible thereafter to take a rise out of that engine. Miles of full throttle have no effect upon it, and I may add that my present hot engine was subjected to this treatment, while the cool runner which overheats has not been back to the works. It will go in due course, and I guarantee that when it comes back it will prove as impervious to overheating as its excellent stable mate.

Overwhelmed!

Messrs. A. J. Stevens (1914), Ltd., Wolverhampton, ask us to insert the following note: "As it is quite impossible for us to thank individually all who congratulated us upon our recent success in the T.T. race, we trust they will accept this as an acknowledgment of their good wishes."

A Beauty Spot in the I.O.M.

On the Island last week many visiting motor cyclists took advantage of the hospitality of Mr. H. H. Crippin, who invited them to tea at his hotel at Glen Helen, and gave them permission to roam through the very beautiful glen.

C. and M.T. Benevolent Day at Manchester.

On Monday subscriptions for the Manchester Centre of the Cycle and Motor Trade Benevolent Fund will be sought by an energetic committee, led by the chairman, Mr. Fred Webster, and assisted by a band of volunteers. It has always been the custom in the past for sympathisers to express their appreciation of the work of the fund by means of donations on that day, and it is hoped that on this occasion those who have previously assisted in this way will forward their donations to the centre hon. treasurer, Mr. A. Freeman, Lucas, Ltd., Manchester, in order that their contributions may go to swell the total for the day. The adequate organisation of the outlying districts is one of the problems of the scheme, and the services of those who can spare an hour for this purpose will be appreciated by the hon. secretary, Mr. N. Randolph, Dunlop Tyres, Manchester, who will furnish all particulars.

THE MAN WHO KEPT THE JUNIOR RACE INTERESTING!

The end of a plucky ride. J. Whalley, with flat rear tyre and with silencer adrift, after finishing a ride remarkable for fine riding, bad luck, and sheer grit.

Special Features.

THE SENIOR T.T. RACE.
TECHNICAL ASPECTS OF THE RACES.
IMPRESSIONS OF THE JUNIOR EVENT.

Popular Machines with the Clubs.

An analysis of the makes of motor cycle entered by the various clubs in the M.C.C. Club Team Championships for *The Motor Cycle* Cup, to be held on Saturday, provides some interesting information. There are 23 Triumphs, 17 Nortons, 13 Harleys, 13 Sunbeams, and 11 Indians.

1914 AND 1921 T.T. WINNER.

Eric Williams's tired smile of victory would indicate that he would enjoy much more a quiet bath and a few hours rest than the enthusiastic demonstrations of his admirers.

Reliability of Overhead Valves.

Overhead valves swept the board in the Junior race. The most violent critic can hardly object that properly designed overhead valve gear is unreliable after the consistent performance of all the A.J.S. machines. The average tourist at any rate, will hardly break valves that withstand five and six laps of the Isle of Man course at over 52 m.p.h.

Safety in Night Driving.

There is still room (says *The Autocar*) for improvement in the rules and regulations governing the position of lights on modern road vehicles. When trucks and trailers are being drawn by a traction engine each should carry a light upon its right-hand side, so that other road users can see plainly exactly what they are meeting. Also when an engine is towing trucks, etc., every truck should be provided with a red light to the rear; and when any part of a load projects more than three feet beyond the rear light the load itself should also carry a red light

ROAD TESTS OF NEW MODELS.

The 2¾ h.p. O.K. Sidecar.

A lightweight sidecar outfit designed to meet the requirements of those to whom economy in upkeep is a consideration—the 2¾ h.p. O.K. Junior.

WHEN it is realised that the five leading 250 c.c. lightweights in the Junior T.T. race finished the 188 mile course at speeds varying from 42 to 45 m.p.h., one cannot wonder at the growing popularity of this type of motor cycle for light sidecar haulage. Machines that make such fine performances as these *must* possess a reserve of power much above the requirements of the ordinary 20 m.p.h. solo rider.

This is no new discovery, of course. The ultra-lightweight sidecar outfit is now an established type, and more and more makers of genuine lightweights are turning their attention to the sidecar hauling possibilities of their products. Messrs. Humphries and Dawes, Ltd., the makers of the 2¾ h.p. O.K., form a case in point; although in this instance it has been decided to adopt an engine of slightly larger capacity, and the frame has also been modified—it has not been redesigned—to meet the additional claims on power and reliability entailed by the extra passenger. That by doing so they have not lost the daintiness and low weight one expects (but does not always get) from such outfits was proved to us recently on the occasion of a short road trial of the new model.

An Impression of Solidity.

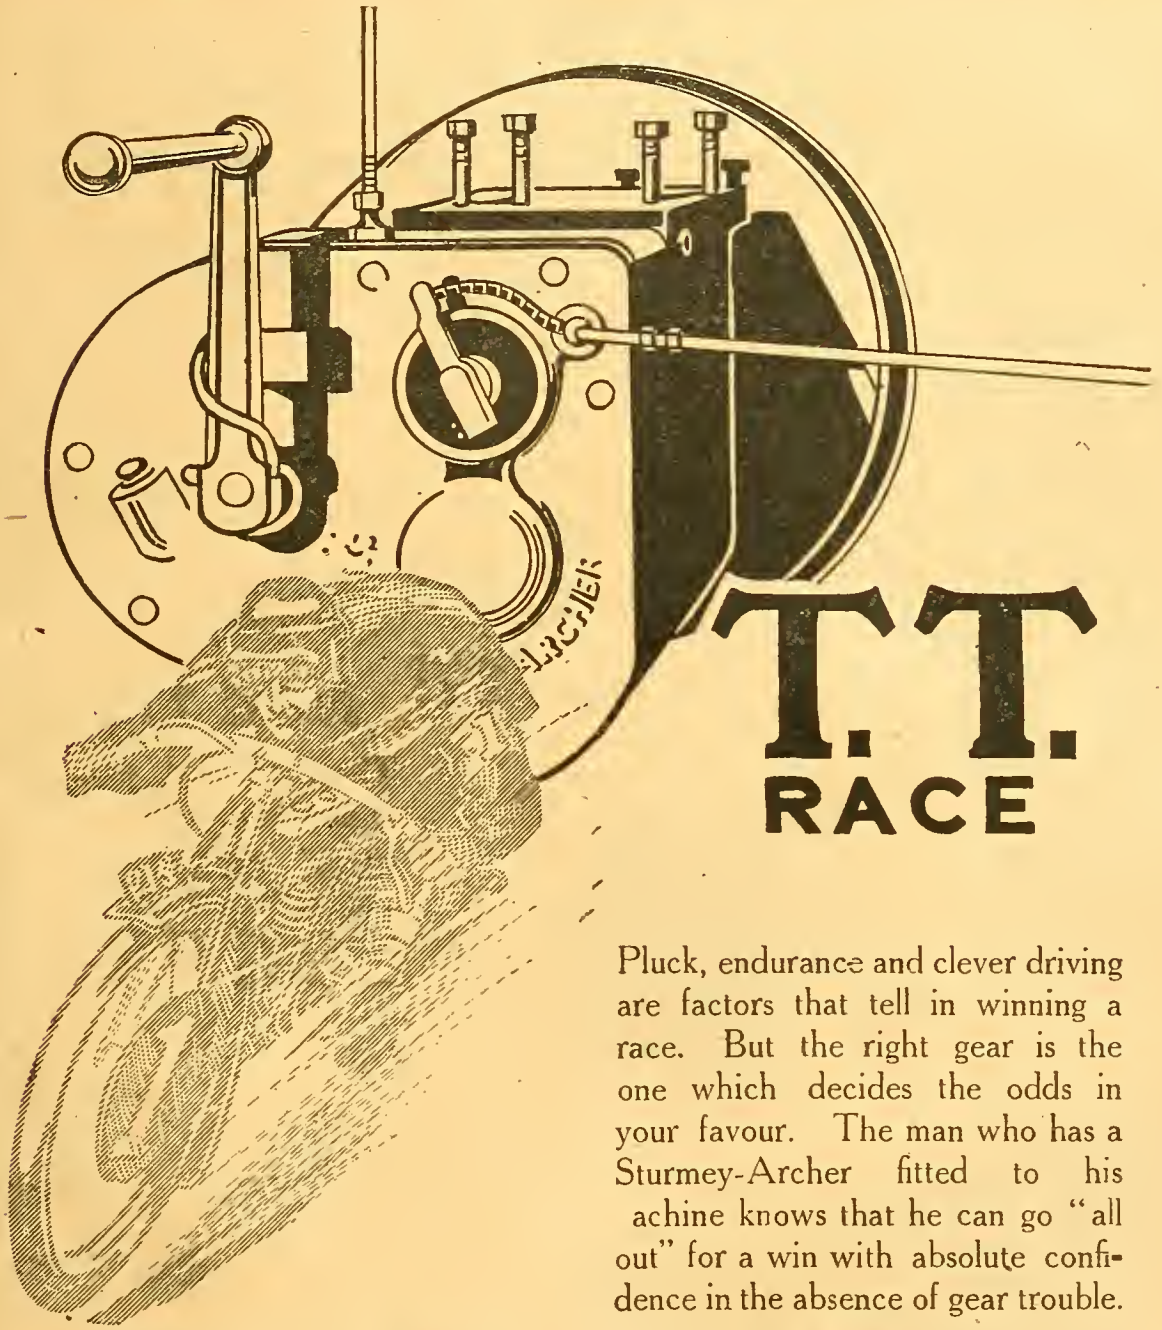
On first mounting the saddle, and even before starting up the engine, one gets the impression that this lightweight outfit is a serious proposition and not a toy. The riding position is comfortable, and—an important point—even a fairly tall rider is not cramped, and the designers have succeeded in making a small machine "feel" like a big outfit (as regards the rider's position) and yet have retained perfect symmetry in the general outline.

Starting up, any lingering qualms and suspicions that, after all, the O.K. outfit would be underpowered for the heavy load we were to impose upon it were quickly dispersed. A pleasing purr from the engine might have been produced by almost any two-stroke—although there was a noticeable absence of vibration—but on "opening out" the power and acceleration were unmistakable, and top gear was engaged in a very short space of time indeed, considering the conditions—an up-grade and a heavy passenger.

Our favourable initial impression of the power of the engine remained during the run, which included only one gradient that called for the lower ratio. This change-down we had fully expected, but had the road been clear we think that, actually, we might have just got up on top.

As we mentioned earlier, the engine is of a greater capacity than the one normally fitted to the O.K., being a Union two-stroke of 70 × 76 mm. (292 c.c.). It is a workmanlike design of the three-port type, and is chiefly notable for the novel magneto drive—a universal coupling from the main shaft. Otherwise it follows conventional lines.

Excellent finish characterises the whole outfit, including the sidecar body. Regarding comfort from the passenger's point of view, we found that some experiments with different angles of the seat were necessary to find a really easy position.



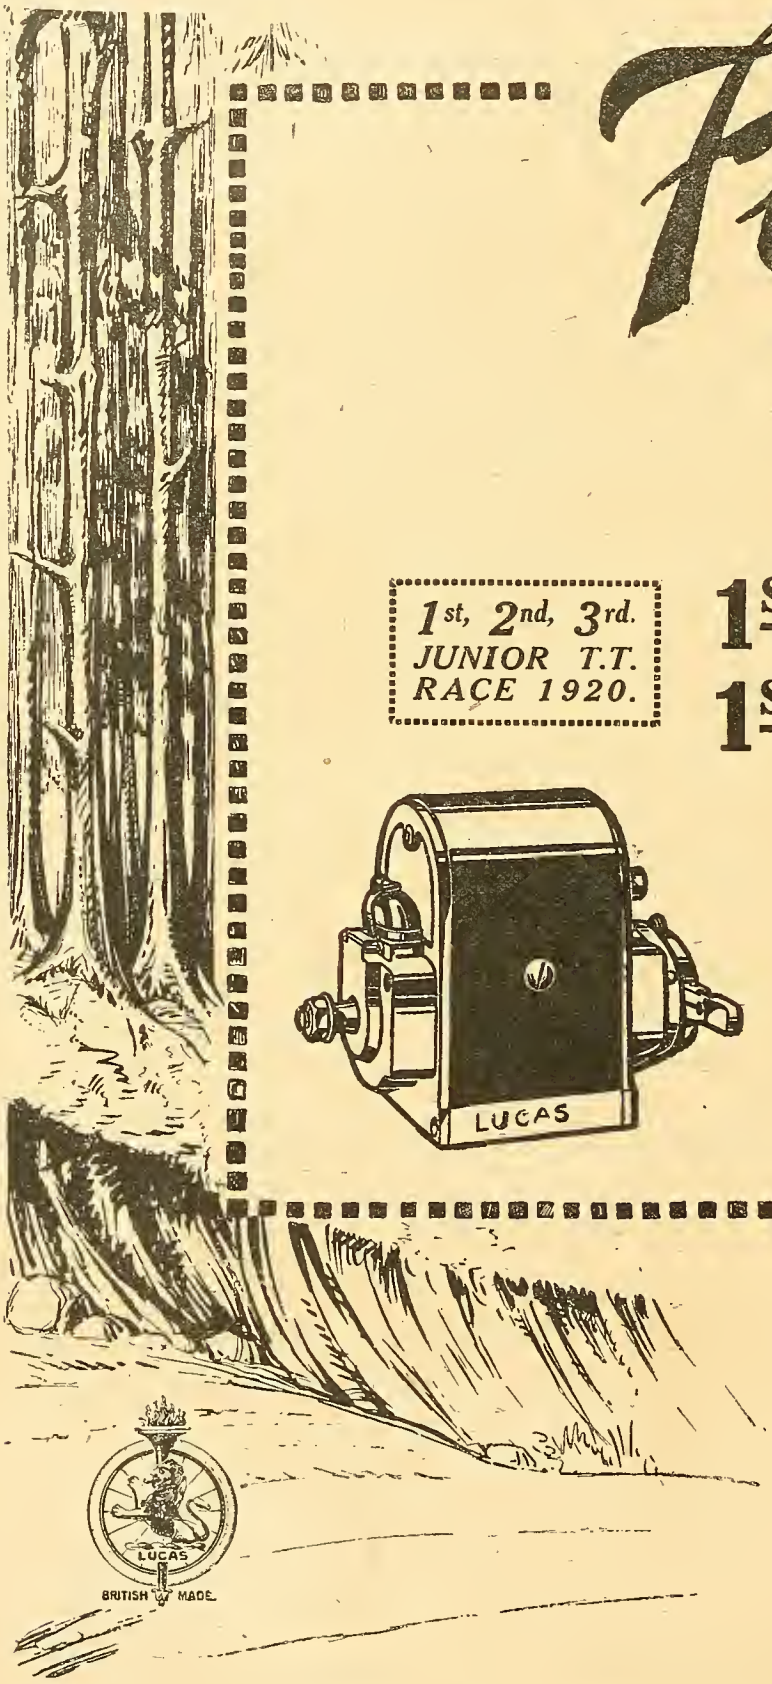
Considering the price, which is only 92 guineas for the outfit, the O.K. sidecar will, we predict, rapidly take a leading position in its class.

AN A.C.U. OBSERVED TRIAL.

THE longest observed trial yet undertaken by the A.C.U. will take place shortly after the T.T. races, when two Excel motor bicycles will complete a run from John-o'-Groat's to Land's End without stopping the engines, in charge of eight drivers, each man taking a 200 miles section.

Although there is nothing difficult in the way of hills on the course, which is about 889 miles in length, the trial is one which will test any machine.

Of the two machines, one will be fitted with a 4 h.p. Blackburne engine and the other a 4 h.p. single-cylinder J.A.P., 550 c.c. We hope to make reference to these machines in an early issue.



T.T. RACE

Pluck, endurance and clever driving are factors that tell in winning a race. But the right gear is the one which decides the odds in your favour. The man who has a Sturmey-Archer fitted to his achine knows that he can go "all out" for a win with absolute confidence in the absence of gear trouble.

Sturmey-Archer Gear Oil, specially prepared for countershaft gears, gives the best results. In quart tins 3/3 each.

Club News

Sutton-in-Ashfield M.C.C.

A class reserved for ladies in the recent reliability trial was won by Miss B. Dove (2¼ O.K.), with Miss W. Parnell (4 Douglas sc.). General results of the trial were :

1, J. Savory (2¾ Douglas); 2, H. Buttery (8 Rex sc.); 3, E. Oscroft (4¼ B.S.A.).

Doncaster and District M.C.C.

Results of the most successful gymkhana held recently at Cusworth Park were as follows :

QUARTER MILE RACE (Two-strokes Only, 275 c.c. and Under).—1, H. C. Dodds (2½ Radco); 2, A. B. Dodds, Jr. (2½ Levis).

QUARTER MILE RACE (Solo, 350 c.c. and Under).—1, H. Christian (2¾ Douglas); 2, R. B. Hepworth (2¾ Douglas).

EGG AND SPOON RACE (Solo, Unlimited c.c.)—1, J. E. Slater (3½ Sunbeam); 2, H. Harper (2¾ Coulson B.).

MUSICAL CHAIRS (Solo or Sidecar, Unlimited c.c.—1, J. E. Slater (3½ Sunbeam); 2, H. Christian (2¾ Douglas).

QUARTER MILE RACE (Solo, Unlimited c.c.).—1, H. Christian (2¾ Sunbeam); 2, J. J. Lister (2½ Norton).

BALLOON BURSTING COMPETITION.—1, J. J. Lister (3½ Norton); 2, R. B. Hepworth (2¾ Douglas); 3, S. Leach (4¼ B.S.A.).

Bristol M.C.C.

On a recent Saturday afternoon the club carried out a very successful trial for amateurs. A course of twenty-six miles, starting and finishing at Keynsham, was covered twice. It included several stiff hills, and touched Farmborough, the outskirts of Bath, and Lansdown. A number of secret checks were taken, to afford a definite means of finding a winner. Thirty-five started, and about twenty-three finished the course, the provisional result being as follows :

1, and King Cup, A. B. Fuller (2¾ Douglas); 2, J. Baynton (4 Blackburne); 3, S. G. C. Walters (7-9 Harley-Davidson sc.).

SPECIAL SIDECAR PRIZE.—H. J. Hobbs (4 Blackburne sc.).

SPECIAL GOLD MEDAL (for Best Lightweight Performance).—J. Bartholomew (2½ Verus).

Taunton and District M.C. and L.C.C. Club.

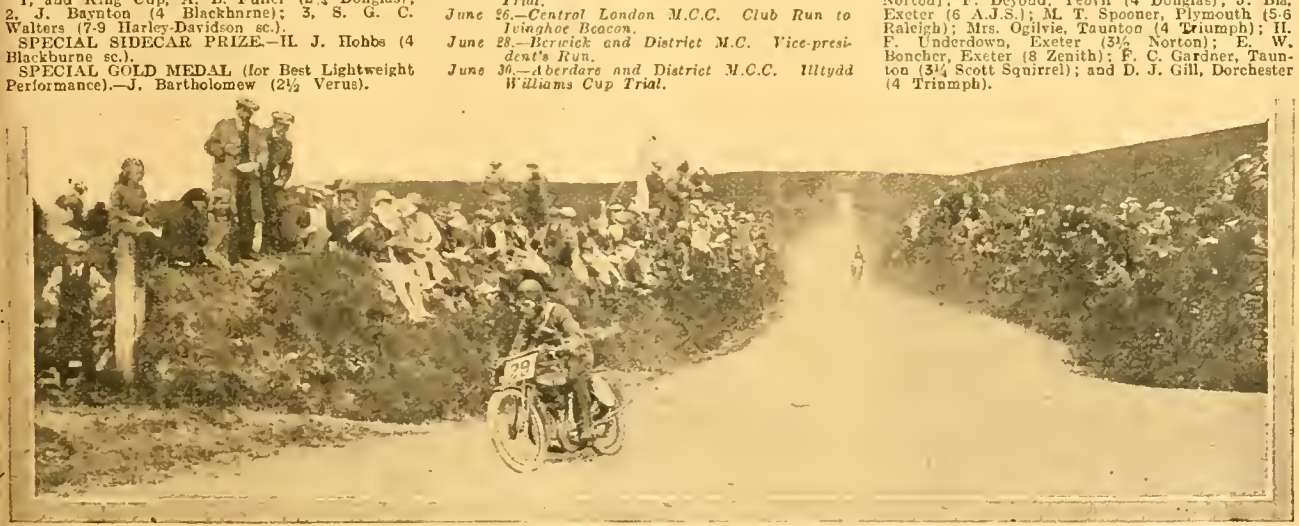
Taunton, Bournemouth, Barnstaple, Bridgwater, Dorchester, Exeter, Yeovil, and Plymouth clubs were all represented by teams in the Yeovil to Land's End reliability trial. The Exeter team, consisting of A. M. Knill (4 Indian Scout), G. R. Claridge (4 Triumph), and E. H. Williams (4 Triumph sc.), won the premier award. Medals were awarded as under :

SIDECAR MACHINES.

SILVER MEDALS.—F. Skinner, Taunton (6 Martinsyde sc.); Chas. Forward, Barnstaple (4 Douglas sc.); F. J. Blackwell, Dorchester (4 Triumph sc.); H. S. Williams, Exeter (4 Triumph sc.); T. V. Hook, Yeovil (4 Douglas sc.); E. A. Wright, Yeovil (7-9 Indian sc.); J. Glanville, Bridgwater (4 Norton sc.); and E. H. Williams, Exeter (4 Triumph sc.).

BRONZE MEDALS.—R. Sparrow, Yeovil (4¼ James sc.); T. Fallow, Plymouth (7-9 Harley-Davidson sc.); L. S. Potter, Taunton, (6 Martinsyde sc.); and F. A. M. Dodd, Dorchester (4 Coulson-B sc.).

LIGHTWEIGHTS.



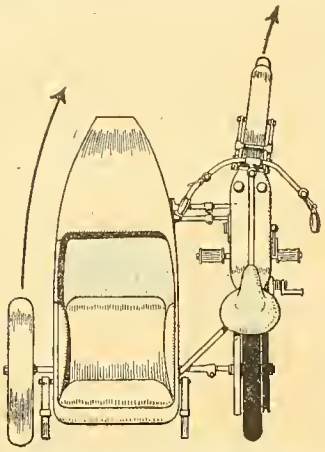
SILVER MEDALS.—W. J. Bailey, Dorchester (2¾ Douglas); J. F. Anderson, Taunton (2¾ A.J.S.); J. P. Webber, Barnstaple (2¾ Douglas); R. E. Waterman, Yeovil (2¾ Douglas); and H. A. Newton, Yeovil (2¾ Douglas).

BRONZE MEDALS.—C. R. Gage, Yeovil (2¾ (Zenith); Miss N. Phillips, Plymouth (2¼ Connaught); P. V. Hare, Taunton (2¾ Douglas); F. Hewin, Taunton (2¾ Blackbird); and S. H. Crowhurst, Taunton (2¾ Cedos).

SOLOS FOR 350 C.C.

SILVER MEDALS.—A. M. Knill, Exeter (4 Indian Scout); G. L. Morrish, Yeovil (3½ Sunbeam); S. H. Shattock, Taunton (3¾ Scott Squirrel); S. Goodman, Taunton (3½ Sunbeam); F. G. Vincent, Taunton (3½ Sunbeam); G. R. Claridge, Exeter (4 Triumph); A. J. Trenchard, Dorchester (4 Triumph); A. E. Hann, Dorchester (3 A.B.C.); B. V. Tucker, Bridgwater (3½ Norton); C. G. Clapshaw, Yeovil (4 Douglas); S. House, Bridgwater (3½ Norton); and R. J. Symonds, Dorchester (3¼ Lea-Francis).

BRONZE MEDALS.— R. B. Robins, Dorchester (4 Triumph); S. W. Easton, Taunton (3 A.B.C.); O. Ford, Exeter (4¼ B.S.A.); K. Delve, Barnstaple (4 Triumph); D. S. Southcombe, Yeovil (3½ Norton); F. Deyond, Yeovil (4 Douglas); J. Bia, Exeter (6 A.J.S.); M. T. Spooner, Plymouth (5-6 Raleigh); Mrs. Ogilvie, Taunton (4 Triumph); H. F. Underdown, Exeter (3½ Norton); E. W. Boncher, Exeter (8 Zenith); F. C. Gardner, Taunton (3¼ Scott Squirrel); and D. J. Gill, Dorchester (4 Triumph).



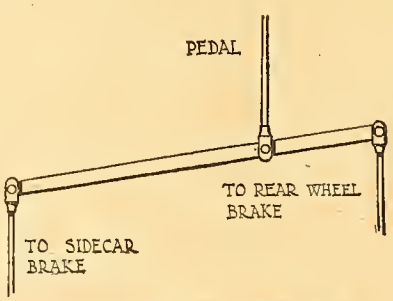
FOUR-STROKE v. TWO-STROKE IN THE JUNIOR.

Many of the spectators are so busy consulting programmes and watches that they hardly notice this little duel between D. Young (2¾ Blackburne) and L. Vickary (3 Ivy) at Craig-na-baa.

CONCERNING SIDECAR BRAKES.

Systems that are Dangerous and those that are not. The Experiences of a Well-known Rider.

THE coming of the sidecar taxicab has once more brought to the front the question of fitting a brake to the sidecar wheel. There is an idea abroad that these brakes are dangerous *per se*. In the case of the independent passenger-operated brake, this may be admitted at once without much fear of contradiction; but there are other types, notably the driver-operated compensated brake, which should not be condemned without thorough investigation.



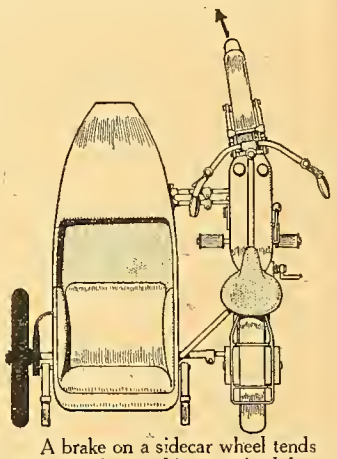
When the brake is applied to the driving wheel the tendency is for the sidecar outfit to swerve to the right.

Before venturing to detail experiences with sidecar brakes, it may be desirable to trace causes and effects when brakes are applied. Take, in the first place, the ordinary sidecar outfit with a rear brake on the motor cycle but none on the sidecar. When the rear brake is applied the cycle is retarded, but the sidecar must still tend to run on. As the attachment is anchored to the cycle, it is safe to assume that it must try to run round it, pivoting to the right. (In these notes I assume throughout that the sidecar is on the left of the cycle.) I suggest, therefore, that the sidecar must exert a push to the right. We are, however, so accustomed to this effect, accepting it as part and parcel of sidecar driving, that we do not notice it, but correct it automatically.

Independent Brakes Undesirable.

At the other end of the scale is the outfit with an independent brake fitted to the sidecar wheel. When this type of brake is applied, the effect is the exact opposite to that prevailing when a brake is applied to the driving wheel. The sidecar is retarded and the cycle attempts to swing round it. The result is a very decided pull to the left, difficult to correct.

If a brake is required on the third wheel, then it is obvious that we must have the sidecar brake interconnected with that on the driving wheel, but so designed and adjusted that application of the brakes exerts less retarding effect on the sidecar than on the motor cycle. This is commonly called a compensated action. It is easily rigged up for experimental purposes by introducing a yoke-bar at some point in the control. If the pull rod is attached to the centre of the yoke, there is still a decided pull to the left. Unequal distribution of power is obtained by moving the pull away from the centre.



Compensating lever arrangement for actuating rods of rear wheel and sidecar brakes suggested by our contributor.

Experiences with Compensated Brakes.

I had precisely such a brake on my Clyno outfit for the Scottish Six Days Trial of 1914. If I remember rightly, I found about three-fifths power to the motor cycle brake and two-fifths to the sidecar brake was a satisfactory distribution.

When I first fitted this brake I felt a slight sensation of "pull to the left" whenever I applied it. But this feeling quickly disappeared, and at no time was it at all pronounced, still less dangerous. The fact, however, remains that other riders always noticed it when they drove my outfit, but they also ceased to feel it after the first few miles. Now comes my main contention. I believe this "pull to the left" is nothing more than an absence of the "push to the right," which I have suggested is inherent in all ordinary cases.

A brake on a sidecar wheel tends to turn the machine to the left—hence the desirability for brakes on each of the rear wheels operated by a compensating lever.

A System Worth Adopting.

Until I am convinced of some better interpretation of my experience, I cannot help thinking that every ordinary sidecar oufit *does* tend to "swing right" whenever the brake is applied. We are, however, so used to it that it does not occur to us to isolate the phenomenon. In spite of the risk of being scarified by the high brows of the technical world, I will go so far as to propound a theory I suggest that a driver-operated compensated sidecar brake of the type described, so far from being dangerous, is superior to having brakes on the motor cycle alone, because: (1) It corrects the "push to the right" inherent in every non-sidecar-braked outfit and (2) increases greatly the total retarding effect obtainable before wheel-lock supervenes which is the important period.

I can truthfully say that my three-braked Clyno outfit in 1914 was, just because of this third brake, the most delightful machine to drive that I have ever yet handled in a long riding experience. I can only hope that this present revival of the subject will lead to a general adoption of the compensated sidecar brake.

P. W. BISCHOFF.

The International Senior Tourist Trophy Race

H. R. Davies, on a 2¾ h.o. A.J.S. (74 × 81 mm. = 349 c.c.), wins in the Record Time of 4h. 9m. 22s., at an Average Speed of 54·49 m.p.h.; F. W. Dixon (3½ Indian), Second; H. le Vack (3½ Indian), Third. Fastest Lap by F. G. Edmond (3½ Triumph) in 40m. 8s. = 56·44 m.p.h.

THE results of the Senior race last Thursday were received with pardonable incredulity when *The Motor Cycle* wires flashed them all over the country. Howard Davies, using the same 350 c.c. engine with which he rode second in the Junior two days before, won the Trophy in 4h. 9m. 22s., at an average speed of 54½ m.p.h. He was the most consistent rider in the field. For the first four laps he lay second, each time behind a different leader. Taking the lead after four laps he finished an easy winner by 2m. 13s. from F. W. Dixon, on an Indian. Davies's time was 13m. 1s. faster than de la Hay's winning time on a 500 c.c. Sunbeam in 1920. Le Vack, on another Indian, was third, he and Dixon having been Davies's most consistent pursuers throughout. Sunbeam, Triumph, and Norton machines divided the next nine places. The only other 350 c.c. machine entered (another A.J.S., ridden by H. F. Harris) was fourteenth. The first private owner to finish was W. Hollowell, Norton, twelfth. The fastest twin-cylinder was a Scott ridden by R. W. Stanfield (seventeenth). W. Brandish drove his Rover into the thirteenth place. Sixty-four machines started, and twenty-four finished. Many of the leading cracks, whom popular fancy tipped as possible victors, were thrown, including de la Hay, C. P. Wood, and G. Dance. The 1920 lap record was broken twice, viz.:

In lap 4, A. Bennett (Sunbeam), 40m. 19s.

In lap 4, F. G. Edmond (side valve Triumph), 40m. 8s.

A good shower would have been welcome to lay the dust on the eve of the race, but Thursday brought a continuance of bright sunshine, tempered by a cool

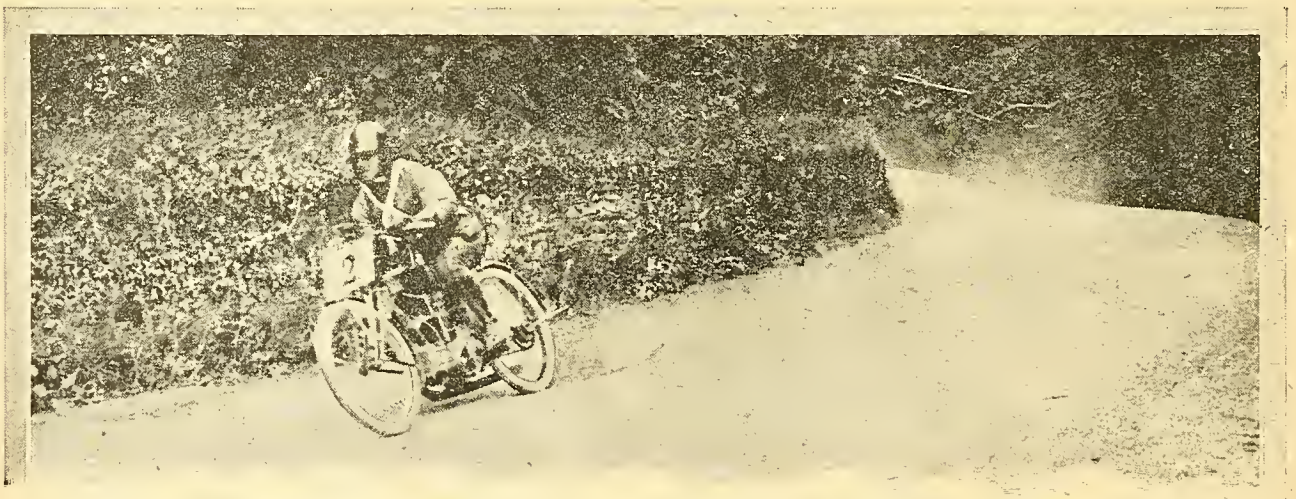
"One" and "two" the numbers read, and very appropriately too, for de la Hay (Sunbeam) was first in the Senior last year and Davies (A.J.S.) was second in the Junior on the preceding Tuesday—but, six hours later ——!

D

Britain and America represented by J. A. Watson-Bourne (leading on a side-valve Triumph) and F. W. Dixon (3½ Indian). Dixon, a wonderful rider, was eventually victor in this duel, and, incidentally, finished second in the race.

wind. Patches of thin mist dotted the mountain, and at times blew down into the lowlands like smoke.

An air of subdued excitement pervaded the neighbourhood of the stands as the crowd mustered and the riders completed their final preparations. Everybody expected a terrific race, and a breathlessly close finish between perhaps half a dozen men.



When the competitors were admitted to the tent, several tyres were discovered flat. Shemans's four-valve Triumph had a 1½in. nail in its back tyre, Horsman's Norton had a pinhole puncture, and one or two others were suspicious of foul play for similar reasons. However, the tent was opened early enough to admit of repairs, and sixty-four starters were soon filing out to their starting places. No. 4 (Ivy) had been transferred to the Junior race on the previous Tuesday; Groves's Rudge never came to the Island; Mallon (Sunbeam) and Eric Longden (Coulson) were absent through injuries received in practice.

Deputies.

Eric Williams's rheumatism had not been relieved by his ride in the Junior, so his Sunbeam was entrusted to Albert Milner. Clayton replaced Carey on the Blackburne, A. E. Wood took Gus Kuhn's place on the B.S.A., and Grahame Walker deputised for the injured Norton rider, Minton. A. H. Alexander was on the grandstand with his arm in a sling, and Norman Black rode his Douglas. Malkow's Indian was ridden by Noel Brown, and H. F. Harris handled O. Wade's 350 c.c. A.J.S. W. H. Hadfield took the mount of No. 64 (Norton), D. Young rode Remington's Blackburne, and Brockbank replaced E. Smith on No. 68 (another Blackburne).

De la Hay started No. 1 by right of his 1920 victory, but No. 2, H. R. Davies, was even more warmly cheered, both on account of his ill-luck in the Junior and because of his pluck in challenging all the 500 c.c. machines. Both men got away in great style, immediately followed by Sgonina on the first of the four-valve Triumphs, remarkable for its very quiet exhaust.

The programme bristled with famous names, alike of riders and of machines. Small wonder that even the experts looked bewildered when a fair spectator asked for a tip. "Wait till they've done a lap!" was a typical suggestion. Many of the Manx natives were backing H. R. Davies, against whom 17 to 1 had been accepted overnight. The more technically-minded observers proved to be rather wide of the mark. The most violent partisans were unable to feel real confidence in their favourites when competition threatened to prove so tremendous. The progress board was watched with almost painful anxiety, and everybody was eager for the first lap to finish, so that the times might provide some index to form. Milner left with an inflator stuck in

There has been considerable discussion lately as to who is the "champion motor cyclist." Many of our readers will not seek this illusive being much further than Howard R. Davies, who is shown (at Laurel Bank) making, perhaps, the greatest piece of motor cycle history to date—i.e., second in the Junior and first in the Senior with the same 350 c.c. A.J.S. engine.

Tourist Trophy Races

JUNE 14-16.

WAKEFIELD Castrol Regd MOTOR OIL

Again Excels!

JUNIOR T.T.

Won on Castrol for SECOND TIME IN SUCCESSION

Aggregate Distance: 188 Miles.

65 ENTRIES.

			Average.
1st	Mr. Eric Williams	A.J.S.	52 M.P.H.
2nd	,, H. R. Davies	A.J.S.	51 M.P.H.
3rd	,, T. M. Sheard	A.J.S.	49½ M.P.H.

In the Fly-Weight Class (250 c.c.) G. Prentice, riding a New Imperial, was First.

SENIOR T.T.

Won on Castrol for SIXTH TIME IN SUCCESSION

Aggregate Distance: 226 Miles.

64 ENTRIES.

			Average.
1st	Mr. H. R. Davies	A.J.S.	54½ M.P.H.
3rd	,, H Le Vack	Indian	54 M.P.H.

Wakefield House, Cheapside, LONDON, E.C.2.

In answering this advertisement it is desirable to mention "The Motor Cycle."

D5

A.V. 8-10 h.p. CAR
AT LESS THAN "SOLO" PRICE

Abridged Specification: 8 h.p. or 6 h.p. (at your option) latest type J.A.P. engine, two-speed fool-proof gear, ball-bearing throughout multiplate clutch CHAIN DRIVE, Claudel or Capac carburetter, cantilever springing, Thomson Bennett magneto, SCREEN, HORN, DISC WHEELS, TOOL KIT, NUMBER PLATES.

A most fascinating and serviceable little "bus" with a record for speed, reliability and hill-climbing achieved at Brooklands, and all big road trials, placing it well in front of all rivals.

Running Costs A Private Owner who has driven an A.V. over *19,000 miles*, in writing of his great appreciation gives his average petrol consumption at over 70 miles per gallon, and as to tyres the original pair are still running on the front wheels.

The Price of the Famous
"A.V." MONOCAR
has now been reduced to
100 Guineas
(Dickey Seat included)

For CATALOGUES and TRIAL RUNS apply to

"A.V." CONCESSIONNAIRES LTD., 15, Woodstock Street (next Bond Street), LONDON, W.1.

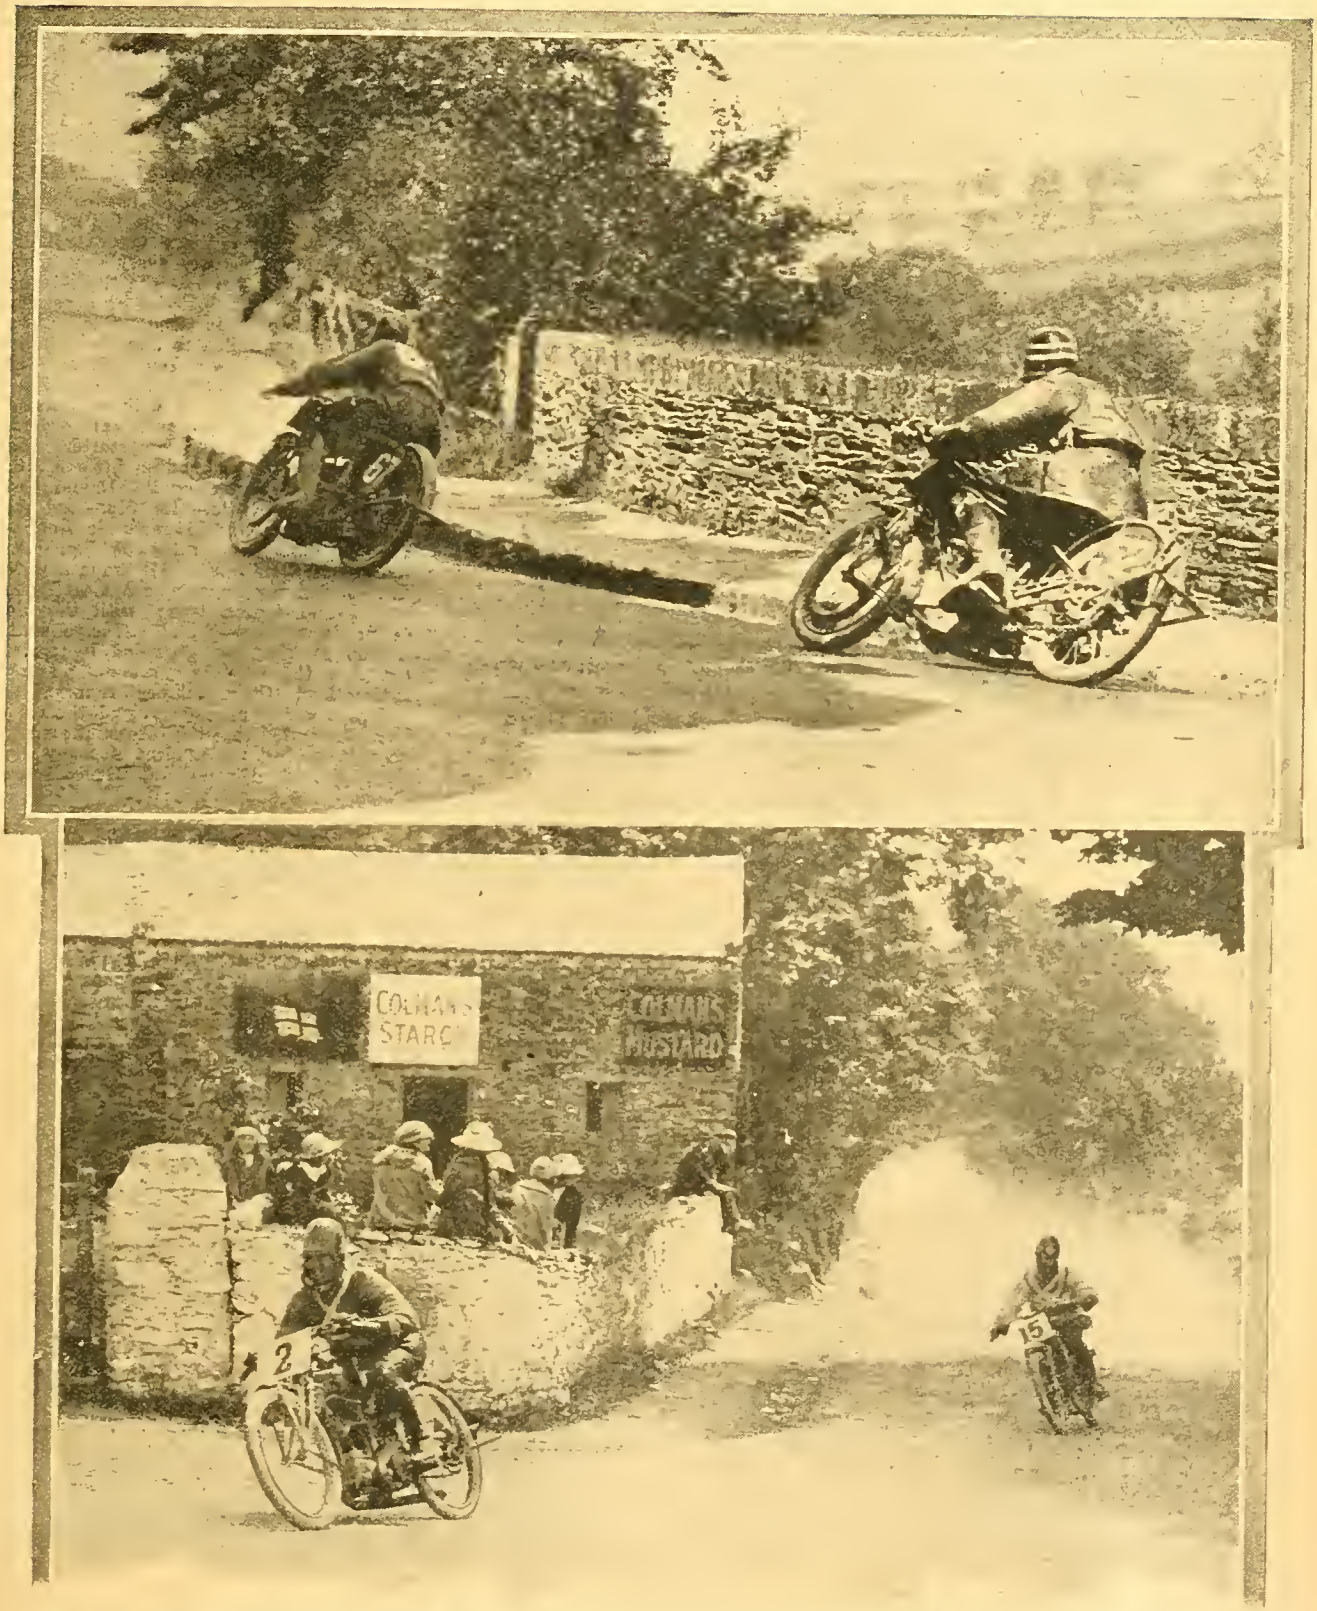
A few good districts open for LIVE AGENTS.

DRUID
FORKS ON T.T. WINNERS.

The remarkable strength and efficiency of the DRUID Fork and its ability to successfully withstand the gruelling and "super-strenuous" conditions encountered in the greatest of all Road Speed Events — The T.T. Races — was most graphically demonstrated in the 1921 Events, when machines equipped with standard DRUID Forks won the following positions:—

SENIOR T.T.
1st, 5th, 6th, and 7th.
JUNIOR T.T.
1st, 2nd, 3rd, 4th, 6th, & 8th.
250 c.c Flyweight Section
2nd, 3rd, 4th, and 5th.

These notable successes most emphatically prove:—



That the DRUID is the Expert's choice,
That the DRUID will withstand the hardest and most gruelling wear and tear.
That the DRUID is highly efficient, relieving the rider from shock and nerve strain, and —
That the DRUID helps to get the Best out of mac ine and rider

— and clearly points to the wisdom of motor cyclists everywhere

riding DRUID - equipped Machines!

A. DREW & CO., LTD., LEOPOLD STREET, BIRMINGHAM.

SETTING THE PACE!

(Top) G. Dance (3½ Sunbeam), No. 67, and W. Brandish, jun. (3½ Rover), No. 52, lying over at Braddon Bridge. The position of these two riders was approximately maintained for a complete lap. Incidentally, it was at this point that C. P. Wood (Scott) fell in the first lap.

(Bottom) H. R. Davies (A.J.S.), No. 2, setting a very hot pace for J. W. Moffat (3½ Scott), No. 15, on Ballacraine corner.

W. Hollowell (3½ Norton) on the Gooseneck. The cornering at this point was good in both races, and the gradient immediately after showed up the machines which were losing "tune."

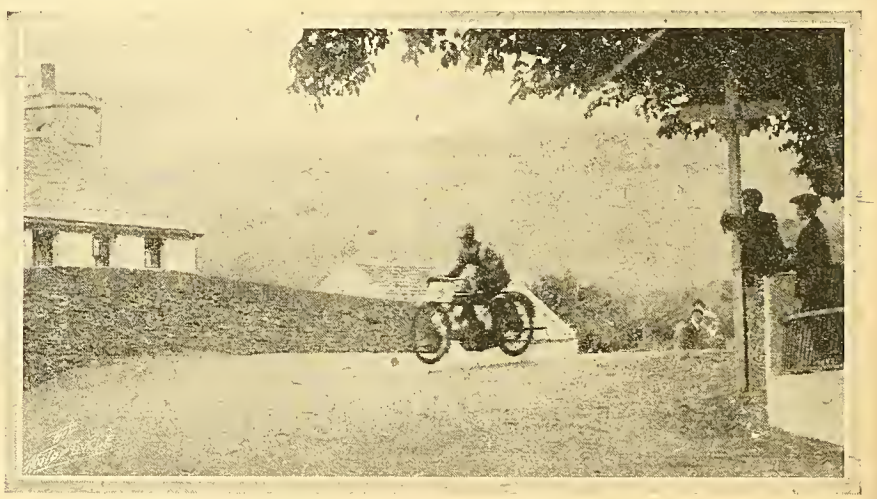
his legging, and had to ram it further down as he got away. Bennett, the American dirt track rider, got his Sunbeam off the mark in great style. The Indian men wore blazing red jerseys, and were easily recognisable. Whalley got a special cheer in recognition of his ill-luck in the Junior. When half the men had left, the progress board showed that one of the popular tips—C. P. Wood on the Scott—was in trouble this side of Ballacraine. The numbers on the board, recording the order past the various telephone boxes along the course, showed that Davies's little A.J.S. had actually passed de la Hay's Sunbeam in the first dozen miles. Of the rest, slower men were clearly being overhauled by Bennett and Dance (Sunbeam), Pattison and Shemans (o.h.v. Triumph), Edmond (side-valve Triumph), Le Vack and Dixon (Indians), Hassall, Hollowell, and Mitchell (Nortons). Dance, of course, got a rousing send-off as he left, and just then our anxiety was relieved when the board showed that C. P. Wood was still riding.

Only Eight Minutes Elapse.

The last man left at 10.3 a.m., and only eight minutes elapsed before the roar of an exhaust signified that H. R. Davies was completing his first lap—41m. 17s. from a standing start was pretty hot! Everybody said, "If the 2¾ h.p. A.J.S. can do 41m. the 500 c.c. engines will get down to 39m." De la Hay thundered past, close on Davies's heels, and apparently travelling a little faster of the two. At a similar interval — about 45s. — came Sgonina, quiet and fast, and presently the procession became almost continuous.

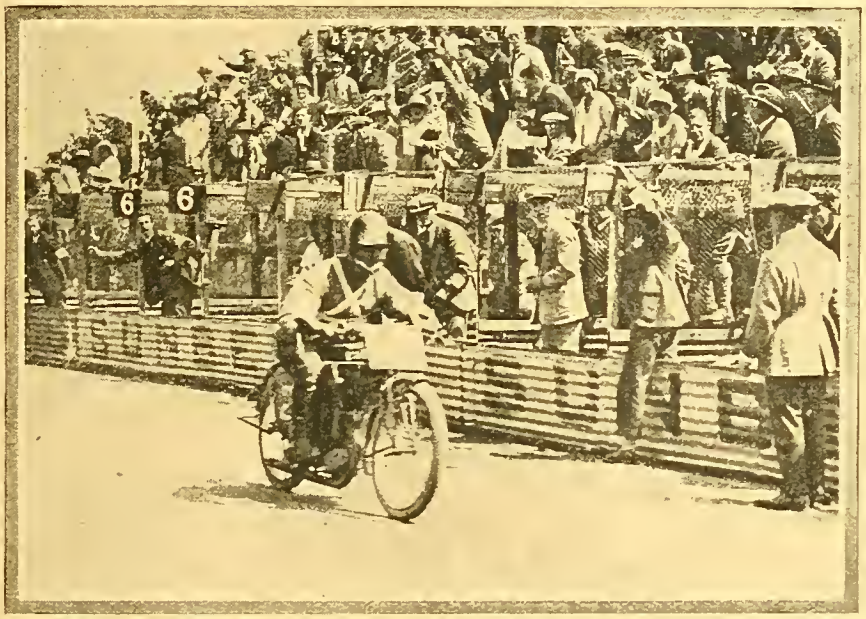
All the men were very dusty, and quite a number had slipped their goggles down to their necks, which suggested fog on the mountain. Langman and Clayton came through alongside, with Shemans on their heels—a dangerous formation, in view of the corners just ahead.

As we waited breathlessly for the lap times, C. P. Wood came in and stopped at his cage. He had been thrown at Braddan Bridge, stopped twice to tinker a battered air intake, stopped again at Ramsey to stuff a handkerchief into his cut knee, and, nevertheless, lapped in 53m. 28s. Brother "Tim" and a doctor forced him to retire. When the lap times were complete, most of the spectators received a great shock, for Davies's dazzling ride had actually taken the 2¾ h.p. A.J.S. round faster than anything except Dixon's Indian, and none of the machines had equalled the record lap in Tuesday's Junior race.



Positions at the End of the First Lap.

	m.	s.
F. W. Dixon (Indian)	41	16
H. R. Davies (A.J.S.)	41	17
F. G. Edmonds (s.v. Triumph)	41	37
G. Dance (Sunbeam)	41	39
H. Le Vack (Indian)	41	57
J. L. Mitchell (Norton)	42	3
C. Sgonina (4-valve Triumph)	42	4
A. Bennett (Sunbeam)	42	8
G. J. Shemans (4-valve Triumph)	42	10
H. Hassall (Norton)	42	14
W. Hollowell (Norton)	42	27
H. R. Harveyson (Indian)	42	29



The half-minute interval between each starter naturally caused the finishing of the first lap to be spread out over half-an-hour; but presently everybody knew that one minute covered the ten leading men, and our anticipations of a terrific race seemed to be justified. One or two dangerous men failed to appear—notably Clapham (Scott—broken piston at Crosby), and unlucky Whalley (Sunbeam), who had started with a poisoned hand in defiance of medical orders. Fifty-six of the sixty-four starters had passed when the astounding little A.J.S. was signalled in on lap 2. Davies had slowed down a little—41m. 53s.—and the crowd half expected his meteoric prominence to die away as the 3½ h.p. men warmed to their work. All the men were due to stop for replenishments after the second and fourth laps; with the aid of special appliances and intensive drill, a stop of 15s. was regarded by smart teams as the absolute maximum. Many riders kept their engines running to ensure a speedier getaway, and the time board indicated that the race might easily be won or lost on efficient depot work. Reg. Brown, Dixon, and Dance were amongst the quickest.

Nearly a Record Lap.

Lidstone's chain came off as he re-started, and in the next lap he had two punctures on Snaefell. Edmond's side-valve Triumph went round in 40m. 45s., *i.e.*, 2s. outside Dance's 1920 record. This hoisted him into first place, and the leading dozen after two laps evinced considerable reshuffling. It was ominous that the A.J.S. remained as consistent as it was speedy; but Triumphs, Sunbeams, and Nortons were still dangerous.

G. A. Vandervell (3½ Norton) jumping the bridge at Ballaugh, which the majority of riders disliked more than any other on the course, owing to the twisting nature of the road at this point.

Cheers for the winner. H. R. Davies (2¾ h.p. A.J.S.) receives an ovation from the grand stand as he flashes over the finishing line at nearly 60 miles an hour.

Second Lap Order and Growing Times.

	h.	m.	s.
F. G. Edmond (Triumph)	1	22	22
H. R. Davies (A.J.S.)	1	23	10
G. Dance (Sunbeam)	1	23	15
F. W. Dixon (Indian)	1	23	25
H. Le Vack (Indian)	1	23	38
H. Hassall (Norton)	1	23	42
G. J. Shemans (4-valve Triumph)	1	24	2
A. Bennett (Sunbeam)	1	24	11
W. Hollowell (Norton)	1	25	13
J. L. Mitchell (Norton)	1	25	30
J. W. Shaw (Norton)	1	25	38
S. Gill (4-valve Triumph)	1	25	43

The depot stops immediately after the end of lap 2 would obviously render record times improbable on lap 3. The humiliation of the 500 c.c. class before the little A.J.S. seemed certain if Davies encountered no trouble.

It was known that he had shifted his Junior engine into a new frame for this day's race, so completely had its behaviour on Tuesday pleased him. A buzz of discussion whiled away the brief intervals between the passings of dangerous men. Was Davies's dazzling riding responsible? Were the 3½ h.p. mounts unable to use their full speed on so tricky a course? But the scoring board relentlessly proved that the men were stringing out. After one lap ten men were riding within sixty seconds of Dixon, the leader. After three laps the first men were spread out over gaps totalling nearly six minutes. The plain fact was that the combination of Davies and his A.J.S., man and machine, had so far completely outridden sixty-one 3½ h.p. machines.

The dominating issue of 350 c.c. *v.* 500 c.c. was variegated by a few incidents during this third lap. Two very formidable men in de la Hay and "Duggie" Brown, both tipped at the post as possible winners, had to be written off. The hope of Manxland fell out with a broken valve rocker. Sunbeams were developing a marked offensive: George Dance was going to the front, and Bennett was not far behind. Dance and Dixon apparently rode the whole of lap 2 with a constant interval of about fifty yards between them. Norton hopes sank when Hassall was held up with temporary lubrication trouble.

Third Lap Positions and Growing Times.

	h.	m.	s.
G. Dance (Sunbeam)	2	4	37
H. R. Davies (A.J.S.)	2	5	5
A. Bennett (Sunbeam)	2	5	45
H. Le Vack (Indian)	2	5	59
F. W. Dixon (Indian)	2	6	27
G. J. Shemans (Triumph)	2	7	36
H. Langman (Scott)	2	8	18
F. G. Edmond (Triumph)	2	8	20
J. L. Mitchell (Norton)	2	9	37
J. W. Shaw (Norton)	2	10	15
J. A. Watson-Bourne (Triumph)	2	10	39
J. L. Emerson (Douglas)	2	10	52

Edmond's drop from first to eighth place was due to a broken petrol pipe at Sulby. Dance was now assuming the place we expected him to fill. The most consistent men were still Davies and the Indian riders, though Bennett looked most threatening.

A Dramatic Lap.

Lap 4 might easily have proved decisive. There would be no more depot stops till it was finished. It was speculated that Dance might increase his lead, and Bennett would possibly catch Davies. It would also show us if the Indians had any more speed up their sleeves. No man could be expected to "ride canny" after the half-distance. Nobody dared to quit the stand in search of lunch. The minutes flitted past, and at last Davies's arrival heralded the half-hour which would see all the leaders finish their fourth laps, stop to replenish, and roar away again. Davies was off again like chain lightning after the briefest of depot stops. Bennett electrified the crowd by a phenomenally early appearance. Quickening up each lap, he had improved his place from eighth to first, and his fourth lap broke all records—40m. 19s., or 55.15 m.p.h. Bennett being No. 9, there was a good wait before the later starters arrived. More surprises were in store. Edmond was signalled in early on a wonderful lap of 40m. 8s. (55.4 m.p.h.). Dance was seven or eight minutes late; his chance had been wrecked by a toss at Glen Helen. Machine and man turned a complete somersault; the two lower gears were put out of action, and he had to ride the last three laps on top gear. So the two Indians drew still nearer the front, and three Triumphs waited hungrily for an opening.

Fourth Lap Positions and Growing Times.

	h.	m.	s.
A. Bennett (Sunbeam)	2	46	4
H. R. Davies (A.J.S.)	2	46	14
H. Le Vack (Indian)	2	47	32
F. W. Dixon (Indian)	2	47	51
F. G. Edmond (Triumph)	2	48	28
G. J. Shemans (4-valve Triumph)	2	50	2
G. Dance (Sunbeam)	2	52	42
J. A. Watson-Bourne (Triumph)	2	53	4
J. L. Mitchell (Norton)	2	53	18
J. W. Shaw (Norton)	2	53	43
T. M. Sheard (Sunbeam)	2	56	15
W. Hollowell (Norton)	2	58	11

Dance, being No. 67, had not long departed before Davies—No. 2—dashed through on his fifth lap. Bennett followed fairly punctually, but was visibly losing pace. The A.C.U. had insisted on a medical certificate before allowing him to start, in view of his fall at Craig-na-baa on Saturday; he now began to feel the effects of a slight concussion—he was riding a marvellous race considering the circumstances. Lidstone, passing the cages at 60 m.p.h., nonchalantly threw a mangled tube into his depot.

The crowd were all on tiptoe to see the full score for five laps. The Indians were clearly unable to catch Davies. We did not as yet know that Dance had only one gear: his speed as he passed through was truly terrific, but he had lost too much time in the last lap. Bennett was evidently tiring. Unless Edmond on his side valve Triumph could overhaul the fleet little A.J.S., the incredible seemed inevitable—an outright victory by a 2¾ h.p. engine. One by one the marked men whizzed through. Then amateur timekeepers wrangled over their watches for

T. M. Sheard (on a Sunbeam) cornering at the Ramsey Hairpin in the Senior race. He piloted an A.J.S. in the Junior event, finishing third.

Here is photographic evidence of the fine and accurate riding of J. A. Watson-Bourne (Triumph). Only a few inches separate him from the comparatively high kerb of the pathway at Braddon Bridge. Incidentally, we think it will be admitted that this is one of the finest photographs of cornering ever taken

a minute or two till a messenger ran with a paper slip from the timekeeper's box to the brushman at the board. At last the full times went up.

Fifth Lap Positions and Growing Times.

	h.	m.	s.
H. R. Davies (A.J.S.)	3	28	16
A. Bennett (Sunbeam)	3	28	17
F. G. Edmond (Triumph)	3	29	57
F. W. Dixon (Indian)	3	30	18
H. Le Vack (Indian)	3	30	21
G. Dance (Sunbeam)	3	36	18
J. A. Watson-Bourne (Triumph)	3	36	40
J. L. Mitchell (Norton)	3	38	42
T. M. Sheard (Sunbeam)	3	41	41
F. C. Townshend (Triumph)	3	42	21
H. F. Harris (A.J.S.)	3	44	15
D. S. Alexander (Norton)	3	44	35

These positions were tolerably decisive. Bennett was decelerating. Edmond had to get back 10½s. from the A.J.S. on the final lap, and Davies is the last man on earth to permit such liberties, and neither Dixon nor Le Vack could be expected to gain 2 mins.

Nothing but accident or trouble could now stop the A.J.S. As it happened, it was Edmond whose luck was out. His oil tank burst at Quarter Bridge. Three times on the lap his engine seized. The last seizure occurred on the mountain, where poor Edmond was so done that he had to rest ten minutes before he could free the piston; of course this tragedy was not known till later. Davies screamed over the finishing line at 1.40 p.m., his engine going better than ever; nevertheless, the necessary time allowances for late starters had to be made before it was quite certain that he had won. The minutes ticked away—too late for Bennett (No. 9) to win now! Edmond had started 21½m. after Davies. Two o'clock struck; the minute hand of the big official clock slid relentlessly on—2.2, 2.3, 2.4. At last Mr. Loughborough seized the megaphone, and announced that the incredible had become the actual. The impudent little 350 c.c., handled with superb ability by Howard Davies, had outstayed and outstripped the cream of our 500 c.c. engines—a miraculous feat which will always be famous in the annals of the sport. Naturally, our first reflection was: "If only Davies had not punctured in the Junior, he would have won them both in one year on the same engine!"

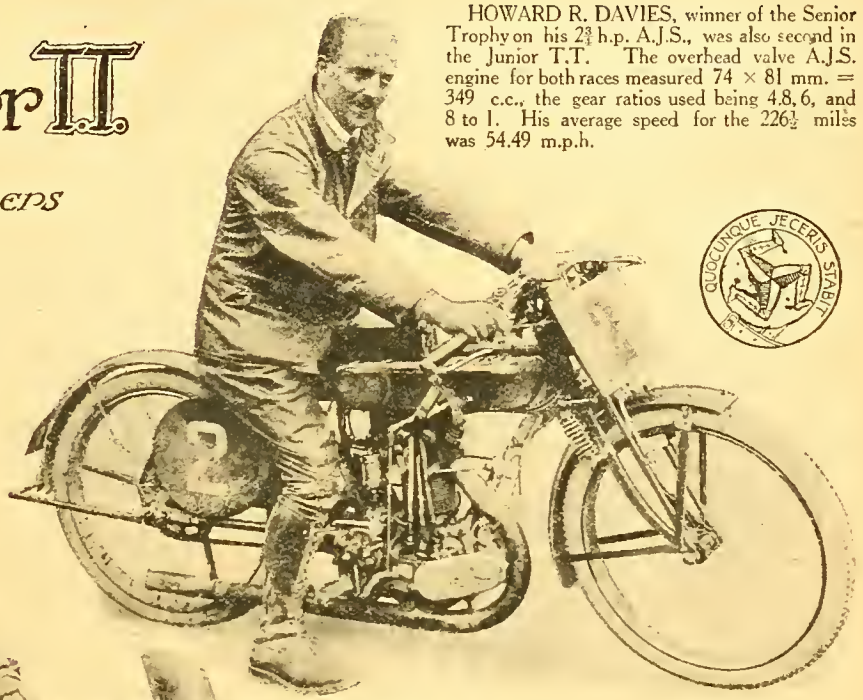
Final Positions and Total Times.

	h.	m.	s.
H. R. Davies (A.J.S.)	4	9	22
F. W. Dixon (Indian)	4	11	35
H. Le Vack (Indian)	4	12	6
A. Bennett (Sunbeam)	4	14	11
J. A. Watson-Bourne (Triumph)	4	18	55
J. L. Mitchell (Norton)	4	24	4
F. G. Edmond (Triumph)	4	24	6
G. Dance (Sunbeam)	4	24	25
T. M. Sheard (Sunbeam)	4	26	42
F. C. Townshend (Triumph)	4	27	51
D. S. Alexander (Norton)	4	29	30
W. Hollowell (Norton)	4	30	18

Impressions at Various Parts of the Course.

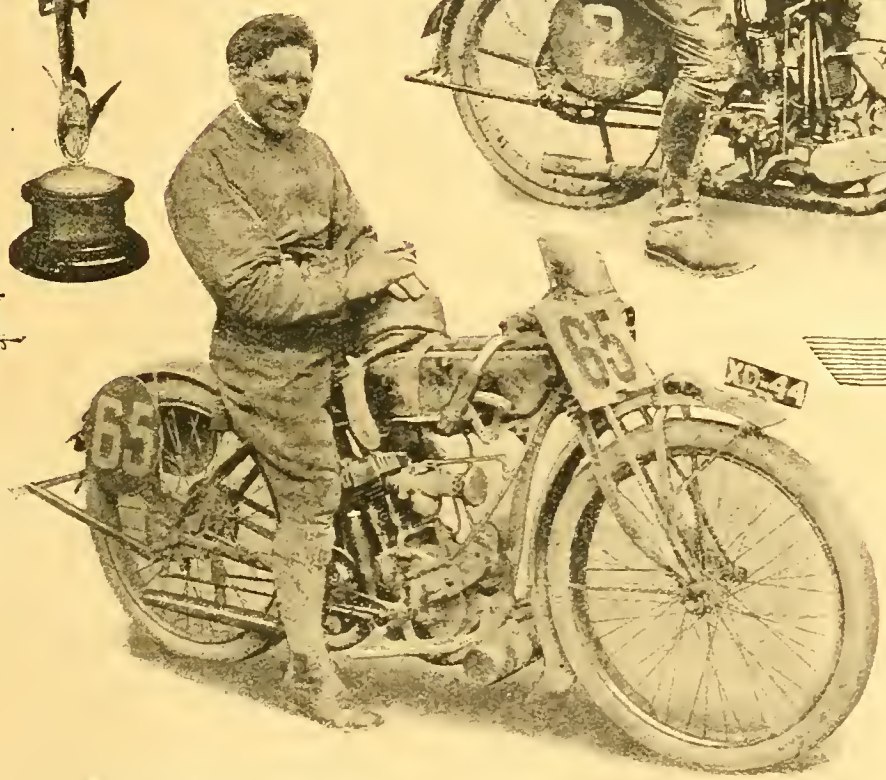
BRADDON BRIDGE.

BRADDON was quite a favourite vantage point, and several hundred spectators had assembled on both sides of the awkward double corner. Thrills there were in plenty, for the practice laps had taught the most adventurous just how fast they could negotiate it without a spill.



Race day speeds are always a little faster than the best practice performances—riders take a little more risk and place increased confidence in their judgment and the power of their brakes. On his first lap Clarence Wood, the Scott first string, over estimated one or the other; probably his brakes were at fault, for he struck the bridge and rather severely cut his leg in addition to damaging his radiator. His carburetter, too, was knocked about. He carried on, however, only to retire at his depot. Sutcliffe, one of the Norton riders, also came to grief here through his footrest catching the ground, tearing up a furrow in the road and throwing him heavily. He was not seriously hurt.

In the last circuits, it was obvious that the riders were speeding up, and not a few spectators sighed with relief when their favourites came through the test of driving for the last time without harm. Dixon had accelerated up to sixty again in a very short distance, and Dance's supporters at this point knew that the



The Senior T.T.

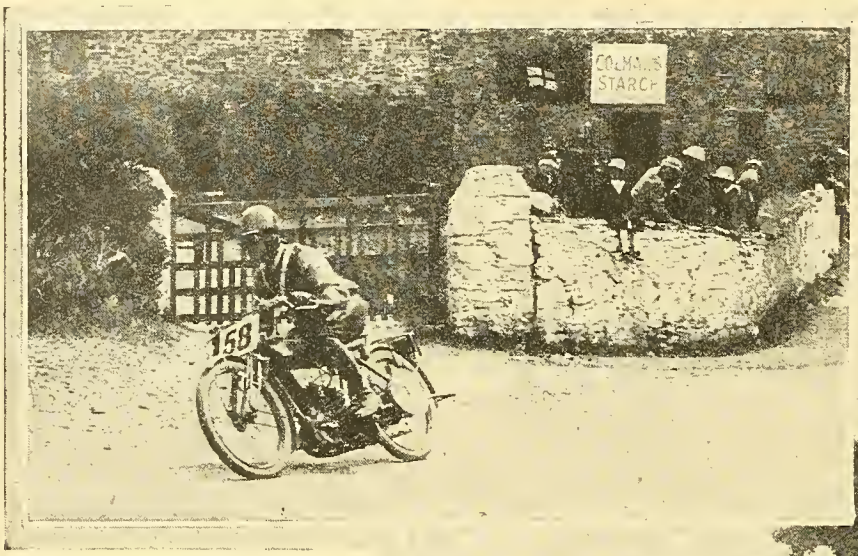
Prize Winners in 1921

HOWARD R. DAVIES, winner of the Senior Trophy on his 2¾ h.p. A.J.S., was also second in the Junior T.T. The overhead valve A.J.S. engine for both races measured 74 × 81 mm. = 349 c.c., the gear ratios used being 4.8, 6, and 8 to 1. His average speed for the 226½ miles was 54.49 m.p.h.

F. W. DIXON, who on a single-cylinder 3½ h.p. Indian attained second place, his average speed being 54.02 m.p.h. The side-by-side valve engine measured 79.3 × 100.8 mm. = 498.8 c.c.

H. LE VACK and his 3½ h.p. Indian, which he rode into third place. The engine is identical with Dixon's, and his average speed was 53.91 m.p.h. All three leaders enjoyed no trouble runs, stopping for replenishments on two occasions only.

Senior Tourist Trophy Race.—



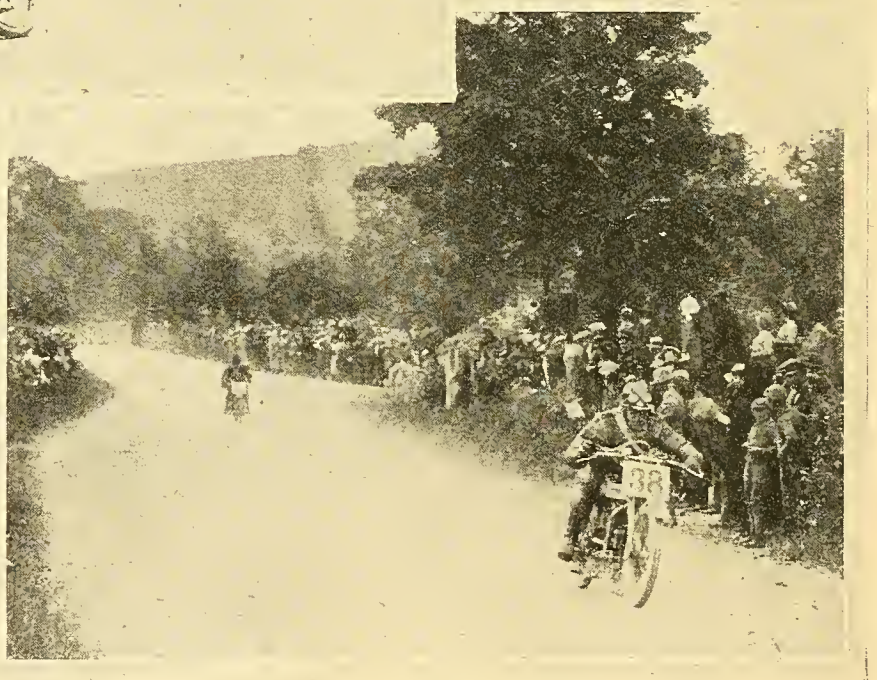
Indian rider had drawn ahead obviously through some mishap to the Wolverhampton star. It subsequently transpired that the Sunbeam crack was only able to use his top gear for the last three laps, which slowed him on the corners and up the mountain. However, he appeared to be unable to shake off Brandish, who, jockeying his Rover superbly, was close upon his heels for two complete circuits.

Brandish, on the Rover, impressed the onlookers with his steady and constant riding.

BALLIG BRIDGE.

WATCHES and unofficial score boards were greatly in evidence at Ballig Bridge, and most of the spectators were able to follow the progress of the race. Even the local lads and lassies, Everyone seemed to expect that the first three men would provide an exciting race in themselves, for the chances of de la Hay's Sunbeam (No. 1), Davies's little A.J.S. (No. 2), and Sgonina's overhead valve Triumph (No. 3) were freely discussed. Probably they did not quite expect the Junior machine to overtake last year's Senior winner before reaching that point—within the first eight miles—and a cheer went up as Davies was seen hurtling towards the bridge. He negotiated it in masterly style, leaping several yards and landing without sign of a wobble. Forty-five seconds later de la Hay passed, the expression on his face suggesting restraint. Evidently he expected the smaller machine to crack up, and, eliminating Davies from his mind as a possible finisher, had set himself a schedule.

The next five passed in starting order. Townshend (Triumph) had already caught C. P. Wood, who had started two minutes ahead of him, and they crossed the bridge together, as did Taylor (B.S.A.) and Harveyson (Indian). After these initial thrills, the riders formed an almost unbroken procession until the second



BALLACRAINE.

AT Ballacraine the spectators worked themselves up into a high pitch of excitement. They had assembled to be thrilled and were not disappointed, although the excellent riding of the experts on the one hand and the cautiousness of the less experienced on the other relegated this once dreaded corner into the "general" class. On his first lap, Hollowell (Norton) attempted to improve upon his practice speed at this point, and narrowly escaped crashing into the wall, while on the second circuit Norman Black (Douglas) scraped by with barely an inch to spare.

Several long intervals between competitors were more than compensated for by the spectacle of three or four riders negotiating the corner abreast. One of these trios consisted of Edmond (Triumph), Horsman (Norton), and Elliott (Rover), the last mentioned coming to a standstill due to a cylinder plug blowing out. Lucas (Scott) also retired here with one cylinder out of action.

Hassall (Norton) took the bend at a splendid speed, as did Harveyson (Indian), who was very much behind time, and was riding like a demon to regain lost ground. Dance's cornering was wonderful to behold, and Dixon was close on his heels, as he had been for many miles. Strange, on his 1914 type twin James, was doing all he was out to do, and could be expected to do in view of latter day developments. A standard machine on well tried lines was in the race to prove reliability; whilst

(Left) At speed round Ballacraine corner G. E. Stobart, who piloted his James twin in capital form. (Right) H. Thorpe and A. H. Alexander, both riding Douglas machines, hurtling towards Laurel Bank after crossing Ballig Bridge

by processes of deduction, were able to estimate the relative positions of their favourites. It was rather amusing to hear them discussing the Italian Sgonina, the Frenchmen Le Vack and de la Hay, and the Americans Harveyson and Dixon. They were uncertain whether Olsson was a Dane or a "misprint." Of course, as it happened, they were wrong in every case.

lap, when the excitement became intense, as Davies was seen to be still leading the Sunbeam by half a minute, showing a nett gain in time of a minute. From Ballig Bridge round again Davies had taken 40½ minutes, but Vandervell (Norton) had only taken another fifteen seconds, and Bennett (Sunbeam) was timed to have lapped at 41m. and Hassall (Norton) 43m.

Senior Tourist Trophy Race—

Thus throughout, the race was followed at Ballig with an eye on the watch; so keen were many of the spectators in this respect that they missed the demonstration of riding skill.

CRAIG-NA-BAA.

THE Ramsey hairpin and Sulby Bridge seem to be rather played out as vantage points on the course. Not so Craig-na-baa. Here there were crowds of spectators. No one was allowed to stand in front of the inn and against the wall round the corner, where a mattress had been placed so as to soften the impact should a competitor strike it. Happily it was not needed.

The first interesting news was that de la Hay and Davies were running close together, and soon after that the latter, who was leading, was reported to have reached Ramsey. His arrival, followed by de la Hay and Sgonina, was vociferously cheered. In course of time it was clear that the leading men were Davies, Dixon, Edmunds, Le Vack, and Bennett, but definite news was hard to gather. Though the corner was on the down grade, all the riders changed down to second to negotiate it. On the occasion of Bennett's (Sunbeam) first arrival, he went dangerously near the wall.

Some excitement ensued when Milner (Sunbeam) and Harveyson (Indian) arrived together, the Indian rider eventually shooting ahead down the straight. Pattinson (Triumph), like all the Triumph riders, cornered and rode magnificently. Sutcliffe and Hadfield (both on Nortons) were the first men we noticed to take the corner without cutting out.

One of the finest exhibitions of riding was made by Dixon (Indian), who actually passed a competitor on the inside of the corner. Baldwin (Martin) retired here with a broken crankshaft, and Milner was in trouble through a pin puncturing his rear tube.

The Auto Cycle Union deserves the congratulations of all motor cyclists for the excellent organisation of this year's event.

* * *

There was a "Press T.T." after the Junior race, for *The Motor Cycle* was on sale in the Island with a description of the Junior event the day following—an unexpected but thoroughly appreciated event.

* * *

Previous T.T. winners who witnessed last week's races were Jack Marshall, F. A. Applebee, P. J. Evans, Tim Wood, Hugh Mason, Harry Reed, and, of course, Eric Williams, and T. C. de la Hay who again competed.

* * *

Everybody is asking what positions 2¾ h.p. machines will occupy in the 500-mile race at Brooklands on July 2nd. Make no mistake, Howard Davies's performance last Thursday has given the 3½ h.p. exponents a thorough fright.

* * *

Dr. Low, the judge who examined the winning machines after the races, spoke in high terms of praise of their internal condition, and laid particular stress upon the improved lubrication systems.

* * *

The heaviest competing motor bicycle in the Senior race was Simister's B.S.A. (314 lb.), and the lightest H. R. Davies's A.J.S. (202 lb.). The heaviest rider was Watson-Bourne (195 lb.) and the lightest R. W. Stanfield (129 lb.).

* * *

"Pa" Applebee found out on the way to the enclosure that he had covered a lap in practice that morning with his cylinder nuts only finger tight.

* * *

W. Brandish, jun., was noticeably the fastest Rover rider, and rode most consistently. His lap times were 44m. 34s., 44m. 41s., 46m. 6s., 44m. 32s., 46m. 3s., and 44m. 40s. The two 46m. laps were those following his stops for replenishments.

* * *

For consistent running the record of the two Sun Vitesse riders would be hard to beat. In the Junior race they finished twenty-eighth and twenty-ninth, G. N. Norris beating his *confrère*, M. Bishop, by 4m. 16s. It should be added that the entries were made on the last day, and the company immediately began to build up two motor cycles with rotary valve engines of 247 c.c.

T.T. TRIFLES.

In Thursday's race, de la Hay, the T.T. holder, had one of the aluminium valve caps blow out during the third lap. The cause of his retirement was not ascertained until after the event, and thousands were left wondering what had happened to him.

* * *

There was talk in the Island of arranging next year's T.T. on French soil, and there is much to be said in support of the suggestion.

* * *

To average 44.9 m.p.h. for 188¾ miles is a performance which indicates the progress of 250 c.c. engines. The figures represent the record of D. G. Prentice when he won *The Motor Cycle* Cup on a 2¼ h.p. New Imperial-Jap.

* * *

The A.C.U. officials were very keen on the observances of the rule dealing with the changing of competitors' equipment specifications, but the official who complained that a rider who had declared he would use a Lucas magneto and turned up with a Thomson Bennett (made by the Lucas Electrical Co.) took the biscuit.

* * *

The Electric Ignition Co. were distributing mascots in the shape of silk handkerchiefs bearing a lucky horseshoe (magnet), and wishing the wearer the best of good fortune.

* * *

The timing box on the grand stand was an excellent piece of organisation. The edifice was built on two storeys, in the lower of which there was a small independent telephone exchange connected to the principal parts on the course. Above were desks for the timekeepers, facing a window looking up the road, a calculating machine to facilitate the working out of the times which were entered in the scoring books and also on cards which were dropped down a chute to Boy Scouts, who passed them to the scoring board official; and two telephones, one to the marshal and the other to the principal posts on the course. The clerk of the course, Mr. T. W. Loughborough, sat at a window at his own desk, with the telephones and a megaphone at hand.

* * *

Sulby Bridge, regarded as the most dangerous bend on the course, was treated with great caution by most; H. Pattinson (Triumph) did a lurid skid, but recovered himself, while A. E. Taylor (B.S.A.) and H. Langman (Scott) were not too happy.

Colonel Maddoc, the chief of police in the Isle of Man, was of immense assistance to the A.C.U., and personally attended at the Grand Stand on each race day.

* * *

The I.O.M. Steam Packet Co.'s men say that the roar of the T.T. exhausts was audible several miles out at sea.

* * *

G. Strange (James) burst his back tyre on the last lap, and fell three times in consequence.

* * *

Norman Black had only ridden his Douglas three minutes prior to the race (he took A. H. Alexander's place). His back brake went out of action in the second lap, and he rode four laps without it.

* * *

W. Hollowell, who was the first private owner and ran into twelfth place, is only twenty years of age. He is a member of the Warrington M.C.

* * *

The Scotts emit four separate notes on their different gears. In decelerating they are the first four notes of "Home, Sweet Home," and in accelerating of a well-known hymn.

* * *

Riddell (B.S.A.) provided some comic relief after his retirement by pedalling past the grand stand in the wrong direction on a lady's push bicycle.

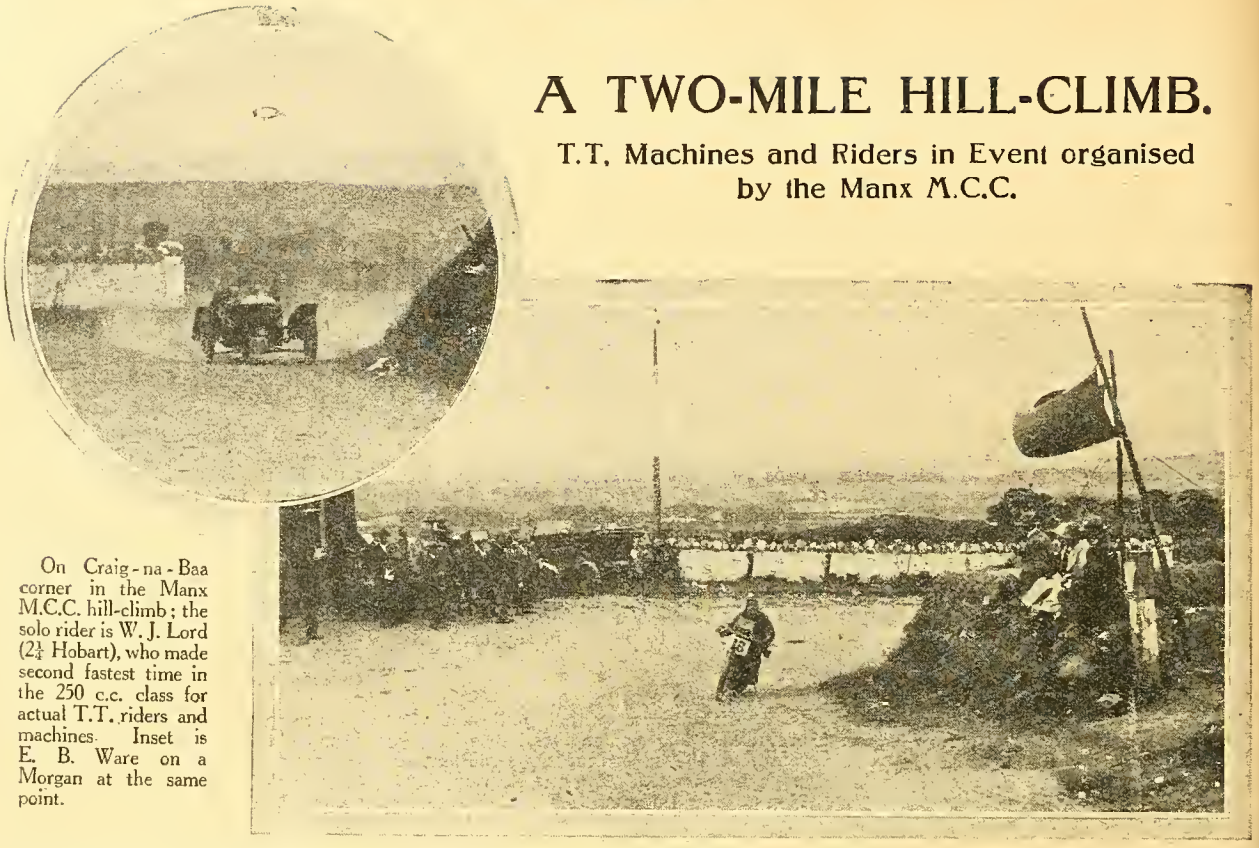
* * *

J. L. Mitchell fell at Sulby Bridge, on his second lap, and hurt his shoulder rather badly. For the remaining laps he was unable to use his left hand.

* * *

The Sunbeam ridden by Sheard, which finished ninth, was owned by the Manx motor cyclist, H. B. Mylchreest in a private capacity.

* * *



Davies's (A.J.S.) expression was one of great concentration, in strong contrast to many, who never seemed so occupied but that they could wave to friends.

THE NISBET AWARD.

THE A.C.U. has decided to award the Nisbet Trophy for the most plucky performance to G. W. Jones (New Hudson). On his second lap Jones struck Sulby Bridge, and was precipitated over the parapet into a bramble bush. Undaunted, he made his machine rideable, and completed the subsequent three laps.

A TWO-MILE HILL-CLIMB.

T.T. Machines and Riders in Event organised by the Manx M.C.C.

On Craig-na-Baa corner in the Manx M.C.C. hill-climb; the solo rider is W. J. Lord (2¼ Hobart), who made second fastest time in the 250 c.c. class for actual T.T. riders and machines. Inset is E. B. Ware on a Morgan at the same point.

IT has become a custom of the local club in the Isle of Man to organise some event on the day following the Senior T.T., and this year a hill-climb was held, in the reverse direction of the T.T. course, from Hilberry to Keppel Gate.

Quite a number of those who rode in the races entered in the special classes for men and machines which actually competed in the T.T. races, and some fast times were made over the two-mile climb, which, although not severe in gradient, is very trying over the last half-mile.

The organisation was not particularly effective, and those especially who had established themselves at Craig-na-baa to see the cornering had little understanding of the meaningless succession of riders who came by in any order but that indicated on the programme.

The Triumphs especially made good ascents, as did the A.J.S. machines in the 350 c.c. class. In the 250 c.c. class B. Kershaw was very fast; but, owing to taking the corner too fast, he lost time in recovering from the ditch into which he rode; unfortunately, he was disqualified on a technical objection, but was obviously faster than others in his class.

Fastest Time by a 3½.

No very startling performances were made in the open classes, in which H. Hassall (3½ Norton) rode to victory; but excellent attempts were made by Miss W. Simmonds (3½ N.U.T.), H. H. C. Price (6 Martinsyde), and W. Brandish, jnn. (3½ Rover). T. H. Copeland (3½ N.U.T.) had a bad fall at Craig-na-baa, but did no serious damage, as his machine skidded into the wall wheels foremost, thus minimising the impact. The projecting portion of the wall was subsequently padded with sacks of straw, but no one else fell.

Passenger entries were lacking, and a duel between a G.N. and A. B. Ware's Morgan provided the only runners in this class; the latter was noticeably faster.

500 c.c. CLASS (for actual T.T. machines and riders).—1, F. Edmond (Triumph), 2m. 17s.; 2, E. Williams (Sunbeam), 2m. 25⅗s.

350 c.c. CLASS (for actual T.T. machines and riders).—1, E. Williams (A.J.S.), 2m. 29s.; 2, H. Harris (A.J.S.), 2m. 29⅘s.

250 c.c. CLASS (for actual T.T. machines and riders).—1, G. Davison (Levis), 2m. 54⅗s.; 2, W. Lord (Hobart), 3m. 2s.

500 c.c. CLASS (open).—H. Hassall (Norton), 2m. 4s.; C. Sgonina (Triumph), 2m 10s.; D. S. Alexander (Norton), 2m. 30s.; J. S. Mylchreest (Norton), 2m. 31s.

350 c.c. CLASS (open).—G. Grinton (A.J.S.), 2m. 30s.; R. Jacobs (Coulson), 2m. 32s.; B. Kershaw (New Imperial), 2m. 50s.

CYCLE CAR CLASS (not exceeding 1,100 c.c.).—A. B. Ware (Morgan), 2m. 45s.; A. Hogg (G.N.), 4m. 20s.

CURRENT CHAT (Continued from p. 786).

The International Six Days.

Entries at ordinary fees for the International Six Days, August 1st to 6th, close on Saturday next.

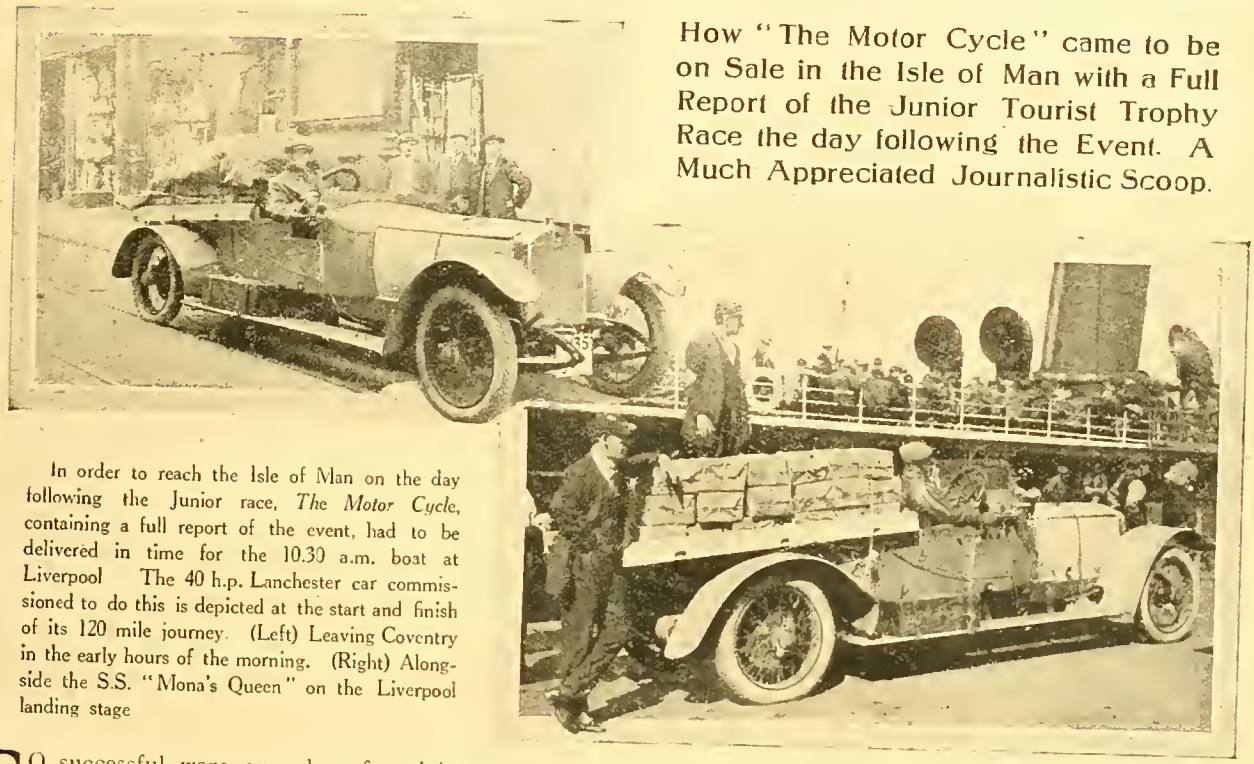
Equipment in the T.T.

... G. Prentice's New Imperial, with which he won *The Motor Cycle* Cup for the best performance on a 250 c.c. machine, had a J.A.P. side-by-side valve engine, and was equipped with an E.I.C. magneto, Cox-Atmos carburetter, K.L.G. plug, Avon tyres, John Bull knee grips, and Pedley handle-bar grips.

The Scottish Six Days.

Over sixty entries have already been received for the Scottish Six Days on July 11th to 16th. The entries, at normal fees, close on Monday next.

The Grand Prix.

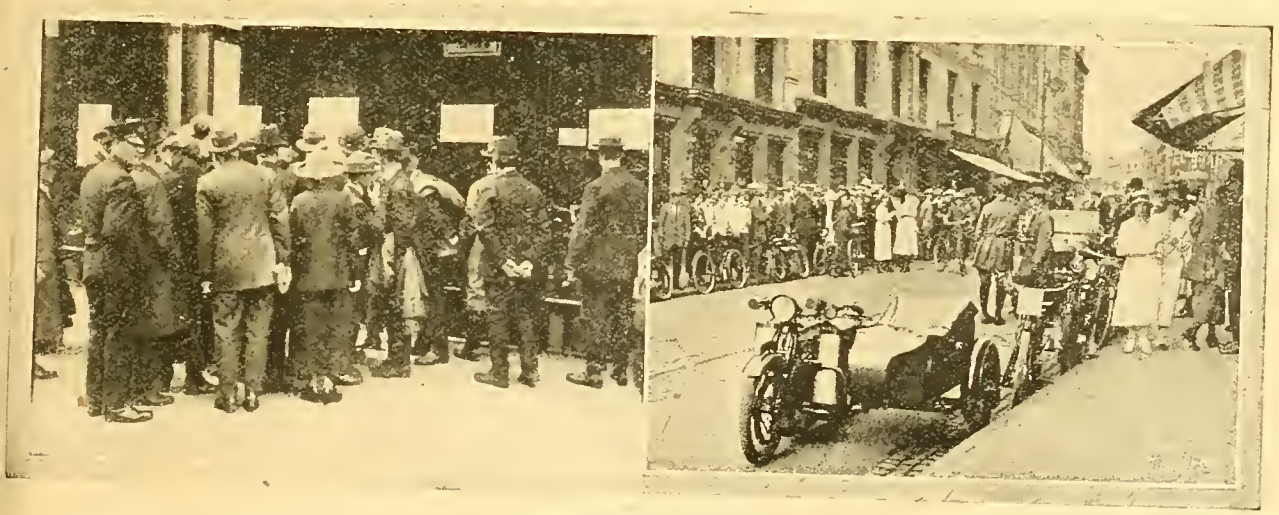


As previously announced, *The Motor Cycle* has secured a number of tickets for reserved seats in the grandstand for the Grand Prix race on July 24th. A few of these tickets still remain, and early application to the Editor is necessary in order to secure them. The price is ten francs.

Speed Trials at Morecambe.

Quite a number of T.T. riders took part in the North-western Centre Open Speed Trials on Saturday last. There were sixty-one entries in all, divided into all the usual classes. A course of one kilometre was marked off on the Morecambe Promenade, and some high speeds were put up. Unfortunately, the meeting was marred by a sad accident, for in the 1,000 c.c. sidecar class (expert barred) S. Seal dashed into an electric light standard, with fatal results. His wife, who was in the sidecar, escaped with slight injuries.

FIRST OUT WITH THE JUNIOR T.T. REPORT.



How "The Motor Cycle" came to be on Sale in the Isle of Man with a Full Report of the Junior Tourist Trophy Race the day following the Event. A Much Appreciated Journalistic Scoop.

In order to reach the Isle of Man on the day following the Junior race, *The Motor Cycle*, containing a full report of the event, had to be delivered in time for the 10.30 a.m. boat at Liverpool The 40 h.p. Lanchester car commissioned to do this is depicted at the start and finish of its 120 mile journey. (Left) Leaving Coventry in the early hours of the morning. (Right) Alongside the S.S. "Mona's Queen" on the Liverpool landing stage

SO successful were our plans for giving readers a detailed illustrated account of the Junior Tourist Trophy Race as quickly as possible after the event, that we were able to have copies of *The Motor Cycle* on sale on Wednesday's boat and in the Isle of Man on Wednesday afternoon, *i.e.*, the day after the event. Seeing that the Isle of Man is about 175 miles as the crow flies from Coventry, where *The Motor Cycle* is at present printed, careful organisation was essential in order to secure this advantage. Congratulations from all quarters have been showered upon this journal.

As we have been asked many times how the feat was achieved, we venture now to provide a few particulars concerning it. One of the chief factors in this case was the service rendered by a superb 40 h.p. Lanchester car which the Lanchester Motor Co. placed at our disposal. Directly the race was over on Tuesday the complete description was transmitted

WHO WILL WIN?

All over the country *The Motor Cycle* T.T. telegrams were eagerly followed, and scenes like the above were common. (Left) Outside the Colmore Depot at Liverpol, just after the third lap positions of the Junior were displayed. (Right) The crowd at Coventry, discussing possibilities between the fifth and sixth laps on Thursday.

First Out with the Junior T.T.—

to Coventry. Owing to congestion on the wires our long message did not reach the office till 10.30 in the evening. After the usual technical routine of preparing the pages had been gone through, printing started in the small hours of the morning, and by 4.45 a.m. some thousands of copies were complete and ready for despatch.

Shortly after five o'clock these copies, made up in parcels, were loaded on to the platform of a special body mounted on the 40 h.p. six-cylinder Lanchester chassis, which at once set out along the open road at speed for Liverpool. Despite the fact that it was carrying a dead weight of approximately three-quarters of a ton of papers, the smooth running and powerful vehicle was able to take advantage of the freedom from traffic which the small hours of the morning gave, and to arrive with plenty of time in hand to catch the 10.30 a.m. Isle of Man boat from the Liverpool landing stage.

There were eager readers on the boat who did not anticipate such a pleasant surprise, and in Douglas itself it is no exaggeration to say that the promenade was "blue," for the familiar cover of *The Motor Cycle* was everywhere in evidence.

"The Motor Cycle" Telegram Service.

During the course of the Junior and Senior T.T. races the respective lap positions were promptly transmitted by wire throughout the country. Never has the Douglas Post Office been pressed to the extent it was on Tuesday and Thursday, but there was little delay in flashing the progress of the races, due to careful organisation prior to the event. That the telegrams were greatly appreciated we have ample evidence from many quarters, and in almost every case the writers mention the crowds which surged around *The Motor Cycle* score boards in all the leading towns and cities. Enthusiastic motor cyclists who were unable to visit the Island were thus again provided with the first news by this journal.

CLUB NEWS. (Continued from page 789.)

Glasgow M.C.C.

Official results have just been issued of the open trial held on the 12th inst., and are as follows :

GOLD MEDALS.—A. S. Barnard (8 New Imperial), R. Watson (4½ Hmmber), T. Doughty (4 Triumph), L. C. Hilyer (3½ Ariel), G. C. Proctor (6 Ariel), G. F. Small (7-9 Harley), M. J. Fraser (7 A.J.S. sc.), J. McFadyen (8 Sunbeam sc.), and B. Gold (8 Blackburne sc.).

SILVER MEDALS.—R. M. Wilson (2½ Hobart), E. A. Small (5 Zenith), J. McPhie (5-6 A.J.S. sc.), and R. D. Robertson (8 Matchless sc.).

BRONZE MEDAL.—A. C. Capaldie (5-6 A.J.S. sc.).

SPECIAL AWARDS.—The winner of both the novice prize and the open special prize was A. S. Barnard (8 New Imperial).

North London M.C.C. and North-west London M.C.C.

On Saturday, those active clubs of the South Midland centre held an inter-club hill-climb on Kop Hill for temporary possession of a challenge cup. As will be seen from the appended results the younger club (the North London M.C.C.) triumphed over its long established opponent by eighteen points to nine. Prestwich dwarfed his opponents in the 350 c.c. class, Marshall and Thompson had their A.B.C.'s in wonderful fettle, and Fitzgerald's riding of his 4 h.p. Norton in both solo and sidecar classes was very fine, but Read's Enfield again put up fastest time of the day. Results :

250 c.c. (SOLO).—1, G. Richardson (2¼ Velocette), North London, 55s.; 2, W. P. Cooper (2¼ Velocette), North-West London, 58⅘s.

350 c.c. (SOLO).—1, A. Prestwich (2¾ Dot-Jap), N.L., 42⅘s.; 2, T. E. Moon (2¾ Douglas), N.W.L., 57⅘s.

500 c.c. (SOLO).—1, E. A. Marshall (3 A.B.C.), N.L., 34⅘s.; 2, G. J. Thompson (3 A.B.C.), N.W.L., 40s.

750 c.c. (SOLO).—1, D. F. C. Fitzgerald (4 Norton), N.W.L., 37s.; 2, A. J. Beauraine (3½ Sunbeam), N.L., 40⅘s.

UNLIMITED (SOLO).—1, G. J. Read (6 Enfield), N.L., 34s.; 2, R. Richardson (7-9 Indian), N.L., 37⅘s.

550 c.c. (SIDECAR).—1, A. L. Jeffery (3½ Sunbeam sc.), N.L., 77⅘s.; 2, G. J. Thompson (4 Triumph sc.), N.W.L., 94s.

750 c.c. (SIDECAR).—1, D. F. C. Fitzgerald (4 Norton sc.), N.W.L., 52s.; 2, R. W. Greaves (4 Norton sc.), N.L., 54s.

UNLIMITED (SIDECAR).—1, H. Hoare (6 Enfield sc.), N.L., 53s.; 2, D. Colver (7-9 Indian sc.), N.L., 56s.

1,100 c.c. (CYCLE CAR).—1, C. D. Malby (8-10 Morgan), N.L., 56⅘s.; 2, H. E. K. Sawtell (8-10 Morgan), N.W.L., 70⅘s.

RESULT.—North London, 18 points; North-West London, 9 points.

At the conclusion of the inter-club event the North-West London Club held a members' climb with the following results :

SOLO (250 c.c.).—1, W. P. Cooper (2¼ Velocette), 50s.; 2, T. E. Moon (2¾ Douglas), 61⅘s.; 3, Miss Buchan (2¾ Douglas), 81⅘s.

SOLO (500 c.c.).—1, G. J. Thompson (3 A.B.C.), 40⅘s.; 2, H. James (3½ Norton), 44⅘s.; 3, A. Cartwright (3½ Sunbeam), 47s.

SOLO (750 c.c.).—1, D. F. C. Fitzgerald (4 Norton), 37⅘s.; 2, G. J. Thompson (3 A.B.C.), 40s.; 3, H. James (3½ Norton), 44s.

SOLO (Unlimited).—1, Fitzgerald (4 Norton), 37s.; 2, R. L. Richardson (7-9 Indian), 38s.; 3, G. Thompson (3 A.B.C.), 40s.

SIDECARS.—1, Fitzgerald (4 Norton sc.), 51⅘s.; 2, Thompson (4 Triumph sc.), 84⅘s.

CYCLE CARS.—1, E. J. Pittock (8-10 Morgan), 67s.; 2, H. E. K. Sawtell (8-10 Morgan), 70s.

Sutton Coldfield and North Birmingham A.C.

Open to the Midland Centre A.C.U., a hill-climb will be held on Saturday, July 2nd, at Penkridge Hill, near Rugeley.

Standard M.C.C.

A. Harriden, on a 4 h.p. Triumph sidecar, won the Maudes Challenge Shield in the trial held on the 11th inst., and referred to in our issue of last week. B. Edwards (3½ Norton) made the fastest ascent of Sunrising Hill.

Luton and South Beds A.C.

So good was the organisation at the recent speed trials that twelve classes were run off in a shade over two hours and a half. C. Baragwanath (8 Zenith) made fastest time of the day. Results :

CLASS 1 (250 c.c.).—1, C. Dunham (2¼ Velocette), 15s.; 2, H. Reyre (2¼ Newson), 16s.; 3, A. Sims (2¼ Levis), 16⅘s.

CLASS 2 (350 c.c. Solo).—1, C. Dunham (2¼ Velocette), 16⅘s.; 2, A. Sims (2¼ Levis), 16⅘; 3, H. Reyre (2¼ Newson), 16⅘s.

CLASS 3 (550 c.c. Solo).—1, A. Marshall (3 A.B.C.), 13⅘s.; 2, C. Smith (3½ Norton), 14s.; 3, B. Wright (3½ Norton), 15⅘s.

CLASS 4 (750 c.c. Solo).—H. Saddington (5-6 James), 13s.; 2, A. Marshall (3 A.B.C.), 13⅘s.; 3, C. Smith (3½ Norton), 14s.

CLASS 5 (Unlimited).—1, C. Baragwanath (8 Zenith), 12⅘s.; 2, H. Saddington (5-6 James), 13⅘s.; 3, C. Smith (3½ Norton), 14⅘s.

CLASS 6 (Sidecars up to 550 c.c.).—1, C. Smith (3½ Norton sc.), 17s.

CLASS 7 (Sidecars, any capacity).—1, C. Baragwanath (8 Zenith sc.), 14⅘s.; 2, H. Saddington 5-6 James sc.), 15⅘s.; 3, A. Barker (8 Zenith sc.), 16⅘s.

CLASS 8 (Cycle Cars up to 1,100 c.c.).—1, P. Child (10 Morgan), 15⅘s.; 2, F. Child (10 Morgan), 19⅘s.

North Lindsey A.C.

A single-geared machine—a 3½ h.p. Rover piloted by R. Smith—gained first place in the recent reliability trial. Second and third respectively were H. S. Jarvis (6 Bat) and K. Macintosh (4¼ B.S.A.).

Leeds M.U.

There were thirty competitors in the trial for the Amateur Trophy on the 12th inst. Final placings have now been announced :

1, H. T. Peel (4 Douglas sc.); 2, P. Greaves (3¾ Scott sc.); 3 and 4 (tie), J. E. Hill (4 Triumph) and F. W. Wilkinson (6 B.S.A. sc.); 5, C. Stevenson (4 Triumph); 6, T. Foster (4 B.S.A. sc.).

MANX HOSPITALITY.

The Auto Cycle Union officials and the press were hospitably entertained to dinner by the Manx Motor Cycle Club on the eve of the T.T. races. In the absence of Councillor Crookall, H.K., the chair was most ably occupied by the Rev. E. H. Stenning.

Dr. Templeton, who proposed "The Visiting Motor Cyclists," extended the guests a very hearty welcome, especially as their visit had at one time been in danger of postponement. Especial thanks were due to those whose efforts had resulted in the improvements of the steamer service. The Tourist Trophy races were of great benefit to the Island.

Another social function was the Manx A.C. lunch to the A.C.U. officials. The chair was occupied by the president, Mr. W. H. Blaker. Among the distinguished Manx officials present were Col. Madoc, Chief Constable, and Mr. J. Drinkwater.

On the Sunday afternoon prior to the races, the visiting motor cyclists were entertained by Mr. H. H. Crippin, proprietor of the Glen Helen Pleasure Grounds, at a garden party.

LAP SCORES OF THE 1921 TOURIST TROPHY RACES.

Individual Lap Times and Total Times of those who Finished in either Race.

SENIOR T.T. RACE.

Distance 226.5 Miles (6 Laps of 37.75 Miles). 64 Starters, 24 Survivors.

	Rider and Machine.	Weight of Machine.	Total Weight.	First Lap.	Second Lap.	Third Lap.	Fourth Lap.	Fifth Lap.	Sixth Lap.	Total Time.	Average Speed.

The winner, Eric Williams, gained the Junior Tourist Trophy, £40 in cash and a gold medal. Second and third receive respectively £20 and £10. Gold medals were awarded to 350 c.c. entrants finishing within 30 minutes of winner's time, and gold medals to entrants of 250 c.c. machines finishing within 30 minutes of D. G. Prentice (250 c.c. New Imperial-Jap), who won *The Motor Cycle* Lightweight Trophy. Fastest time in each lap shown in darker type. Fastest lap of the Junior race, H. R. Davies (A.J.S.), 41m. 4s. = 55 m.p.h.

A CHAT WITH THE SENIOR T.T. WINNER.

A Junior Rider who Won the Senior Event.

HOWARD R. DAVIES, who came wonderfully near scoring a double success in this year's T.T. races, is single, and commemorates his twenty-sixth birthday next Monday, the 27th inst. The 2¾ h.p. A.J.S. machine on which he won the Senior Trophy at 54½ m.p.h. was not the same that he handled in the Junior event (when he finished second after puncturing in the second lap, and subsequently retrieving his lost position), but the engine was transferred to the Senior frame. It is a wonderful engine, too, measuring 74×81 mm.=349 c.c., for it laps Brooklands at 71 m.p.h. Davies told us that his machine, geared 4.8, 6, and 8 to 1, could attain 72 or 73 m.p.h. on favourable stretches of road. His trip was uneventful (so he said), for, apart from two stops at the replenishment pits, he enjoyed a non-stop run. No risks were taken at any time. He passed de la Hay between Ballacraine Corner and Ballig Bridge on the first lap, and thereafter had a fairly clear run until he began to overhaul the tail-enders of the procession. Mist on the mountain proved a slight handicap on two circuits, for it necessitated removing the goggles. Asked if he knew his position, Davies replied "No," and imagined Dance was leading him, though cheering crowds indicated that he himself was among the leaders, despite his limited engine capacity. Davies's mount ran most consistently throughout. Second for four laps, he attained the lead at the end of the fifth lap, and never lost it again—the only competitor to occupy the leading position for two laps. At Governor's Bridge, nearing the end, he actually had time to recognise a chum, who signalled

H. R. Davies, the winner of the Senior Tourist Trophy.

that he was leading. Davies was full of praise for his little mount, which never faltered throughout, and, as he put it, "finished in perfect fettle."

At this remark, he specially went out of his way to introduce his mechanic, Bob Shakespeare, who has tended the A.J.S. T.T. machines from the outset, and is responsible for Davies's hill-climbing and speed mounts. The A.J.S., which weighed 202 lb., he told us, steers perfectly on the Manx course, which, no doubt, accounted for the rider finishing so fresh. Noticing that the front rim was untouched, Davies replied to our interrogation that he had never used the front brake throughout. Howard Davies, magnificent rider though he is, was certainly in luck last week, for he accepted a wager of 75 to 1 with S. L. Bailey that he could not name the winner of the double event—and won! But for a slight dent in the back wheel rim, the A.J.S. mount was as good as it started, and the Hutchinson tyres wore remarkably well and remained almost unmarked. Other equipment included Druid forks, Amac carburetter, T.B. magneto, K.L.G. plug, Renold block chain on front and roller chain at rear, A.K. knee grips, and he used Castrol R lubricant and Pratt's spirit.

It should be added that, apart from last week's achievement, Howard R. Davies, when riding a Sunbeam, tied for second place with the late O. C. Godfrey in the 1914 event. After being taken prisoner whilst flying over the German lines in 1917, Howard Davies, subsequent to his repatriation, joined the Amac Co., and later joined Messrs. A. J. Stevens and Co., Ltd., as competition manager.

THE INDIAN ACHIEVEMENT.

Non-stop Runs for Dixon and Le Vack.

SECOND and third to finish in Thursday's Senior T.T. race were F. W. Dixon and H. Le Vack, respectively, riding 3½ h.p. Indians. Both enjoyed non-stop runs, except for two replenishments at the depot in front of the grandstands. At the start, Dixon unquestionably was one of the favourites, and lived up to expectations by leading at the end of the first lap, covered in 41m. 16s. from a standing start. His top gear ratio is 4.75 to 1, and, according to Dixon, his Indian is capable of 85 m.p.h. Halfway round the second lap he noticed his engine falter, and, glancing down at the valves, saw that the inlet spring had broken in the centre of the coils. Carrying on, he found that his maximum speed had decreased quite 5 m.p.h. Dixon did not wear goggles, relying upon an Easting screen affixed to the left handle-bar. Crouching low, he sat his machine perfectly, and his pace past the grandstand was a sight to behold. Both brakes of the Indian are on the back wheel, and foot-operated. His was the only Indian with footplates, as the others had rests.

F. W. Dixon, second in the Senior T.T.

The single-cylinder Indian engine, which measures 79.3×100.8 mm. = 498.8 c.c, was specially designed by C. B. Franklin (an old T.T. man, now at the Indian factory in America) for the race. It is inclined rearwards, and side-by-side valves are used. The piston is of aluminium alloy with two rings, and is grooved down the skirt, whilst the connecting rod is drilled. Examiners spoke in high terms of praise of the internal condition of the engine, the piston having no trace of carbon. The cylinder head, by the way, is flat for half its circle, and sloped upwards over the valves. Dixon's mount had a Schebler carburetter (the only one in the race), K.L.G. plug, Renold chains, and Hutchinson tyres, the ribs on the back tyre having gone, but the front tyre remaining perfect. He used Speedwell oil and Pratt's spirit.

H. Le Vack thinks he would have done better if he had had another month's experience with his engine, for he had a no-trouble run, and did his best. Of course, Le Vack is always regarded as a super "track" rider, and it was noticeable that he negotiated the many twists on the course with commendable restraint. As regards equipment, his mount was precisely similar to the other Indians, except for an Amac carburetter, and footrests in lieu of footplates.

H. Le Vack, who finished third in the Senior race.

A LAP AT 56.4 M.P.H.

F. G. Edmond's New T.T. Record on a Side-by-side Valve Triumph.

THE honour of accomplishing the fastest lap fell to Fred G. Edmond, who was mounted on one of the new 500 c.c. Triumph machines designed for the race by G. E. Stanley. A long stroke engine is used, viz., 80.5×98 mm., 498.7 c.c., with side-by-side valves, in conjunction with a two-speed gear, providing ratios of 4.2 and 6.5 to 1. Renold chain transmission is used throughout. Edmond is engaged at the Triumph works in Coventry, and latterly, since the company dropped 500 c.c. engines some years ago, he has become expert as a sidecar exponent. But his exhibition on Thursday should have won him a better place, for Edmond and his Triumph were in great form. It was in the fourth lap that he set up a new record of 40m. 8s., equal to a speed of 56.4 m.p.h., which incidentally lifted him from eighth to fifth place. The previous lap, according to Edmond, would have been faster still, for he was delayed for over six minutes replacing a broken petrol pipe near Sulby Bridge.

Undaunted, he completed two more excellent laps, creeping up to third position, only to lose the sporting chance he had of annexing the trophy by reason of the special oil tank at the rear of the seat tube breaking loose from the clip supporting it. This occurred at Quarter Bridge on the last lap. As a result of the loss of oil his engine seized three times on this final lap, the last time near the summit of Snaefell. He had insufficient energy to push it free, and had to wait for ten minutes for the engine to cool down. Remounting, he got home seventh, his average speed for five laps being 54 m.p.h., and for the full course of six laps (226½ miles) 51.4 m.p.h. Edmond earned the respect of the thousands who had eagerly followed his progress and regretted the ill-fortune which befell him. The Triumph equipment included Dunlop Magnum 3in. tyres, Amac carburetter, M-L magneto, and Lodge plug.

Mr. P. J. Evans, of Birmingham, recognising the merit of Edmond's achievement, has decided to present him (as also to H. R. Davies, who accomplished the fastest lap in the Junior race) with a silver cup. Mr. Evans won the Junior T.T. in 1911, when he rode a 2¾ h.p. Humber.

56.44 m.p.h. for 37¾ tortuous miles was F. G. Edmond's terrific speed for his record lap—a time that must stand for another twelve months, and, perhaps—who dare hazard?—indefinitely His mount, of course, is a side-by-side valve Triumph.

"IFS" OVERHEARD IN THE ISLAND.

IF Edmond's oil tank had not sprung a leak?

If the A.C.U. officials were not too hasty in announcing the final positions with two possibilities of quicker times?

If Dance is not the most popular "Senior" rider of the day?

If "Pa" Applebee is not the most popular "Junior" rider of the day?

If the organisation did not exceed in excellence previous T.T. events?

If the early boat on Friday exceeded the limit in carrying capacity?

If next year's races will be held in Ireland or France?

If the weather *could* ever be wet for a T.T.?

If the Senior race will be for 350 c.c. machines next year?

If Juniors will be restricted to 250 c.c. and bantamweights to 200 c.c.?

If Colonel Brereton is not a most courteous and appreciated chairman of the A.C.U.?

If the old rule of allowing extra c.c. for multi-cylinders will reappear?

If G. W. Jones really fell into the river at Sulby, as Secretary Loughborough announced?

If Bennett, the Sunbeam rider, had enjoyed better health on Thursday?

If twin-cylinder mounts will receive a similar setback again?

If the Triumph camp will select their riders earlier next year?

If Edmond was not the real surprise packet last Thursday?

If Davies or the A.J.S. really won?

If the "double event" will ever be pulled off again by any one firm?

If the officious Manx police are relieved now that motorists in their thousands have left the Island?

If the competitors appreciated the work of a score of enthusiasts on the mountain road on Wednesday in removing loose stones?

If there will be a race for T.T. winners before long—they all attend the races regularly each year?

If the action of P. J. Evans in presenting a silver cup for the fastest lap in each event is not really sportsmanlike?

If the A.C.U. recognises the joke in refusing the offer of cups for fastest laps "because it encourages blinding"?

If the Scott notes, resembling the pipes of an organ, were not refreshing to all?

If "Juniors" which weigh approximately 300 lb. ought not to be automatically relegated to the Senior class?

If Davies could have improved his time with a 500 c.c. mount?

If the A.J.S. has not taken much of the shine out of 500 c.c. machines?

If bargaining for the change of equipment on the eve of the race will be prevented by the A.C.U. in future?

If the 500 mile race at Brooklands will give a chance for 500 c.c. machines to regain lost laurels?

If the motor cycle T.T. will precede the car races next year?

If tar will be introduced to Manx roads before long?

If Whalley was not the most admired man on Tuesday?

If Prentice did not prove that modern 250 c.c. lightweights are capable of satisfying all average tourists' requirements?

If Dance had not turned a somersault in Glen Helen?

If the spectators knew that Dance's Sunbeam had to climb the mountain three times with only top gear available?

If safety helmets were not the means of saving three men?

CLUB TEAM CHAMPIONSHIP FOR 1921.

Popular M.C.C. Event for "The Motor Cycle" Cup attracts Twenty-seven Team Entries.

TWENTY-SEVEN teams representing practically all the leading clubs in the country will, on Saturday, compete in the M.C.C. Club Championship inter-team trial for *The Motor Cycle* Cup. The start will be from Tring, the first man of the Leicester and District M.C.C. (last year's winners) being timed away at 1 p.m., and the remaining 161 competitors at half minute intervals.

Three circuits of a thirty-three mile route, including most of the well-known Chiltern hills, are to be traversed non-stop, the team with the greatest total non-stop mileage to win. If more than one team records a complete non-stop the cup will be awarded on a "riding to schedule" basis. Individual competitors may choose their own schedule speeds between limits of 17 and 20 m.p.h.

A full list of the competitors, with their numbers, follows :

LEICESTER AND DISTRICT M.C.C.

Starting Time. H. M. S.	No.	Rider and Machine.
1 0 0 ..	11	H. Petty (3½ Norton)
1 0 30 ..	12	R. Harris (4 Norton sc.)
1 1 0 ..	13	W. C. Pymm (5 Raleigh)
1 1 30 ..	14	J. O. Randle (4 Norton sc.)
1 2 0 ..	15	C. J. Wilcox (3¾ Scott)
1 2 30 ..	16	W. Chapman (8 A.J.S. sc.)

Reserves: R. A. Spitall (4 Norton sc.), P. J. Strong (2¼ Velocette).

SURBITON AND DISTRICT M.C.C.

1 3 0 ..	21	R. C. Staunton (4 Trinmph)
1 3 30 ..	22	Captain R. Charlesworth (8 Zenith sc.)
1 4 0 ..	23	R. A. Green (3½ Norton)
1 4 30 ..	24	D. H. Davidson (7 Harley sc.)
1 5 0 ..	25	W. J. Kelly (3½ Norton)
1 5 30 ..	26	L. Bachelier (7 A.J.S. sc.)

Reserves: A. Ellison (5 Zenith), H. W. Bnll (6 A.J.S. sc.), R. Preston (3½ Sunbeam).

SPEEDWELL MOTOR OIL

THE TRUEST TEST.

THE gruelling four miles climb of Snaefell—the wrench and recovery at Quarter Bridge—the breathless moment, stamping on brakes, then accelerating madly at the Ramsey Hairpin, the long mad blind down the mountain and better than a mile a minute—these try rider, machines, and *oil* to the utmost

More bitter strains is packed into these few hours than the average rider encounters in a life-time—and "Speedwell"—the oil that stood *this* test is the oil for you.

7 out of the 11 on "Speedwell," including S. W. Dixon on Indian, second, and the record lap, S. G. Edmonds

Only "SPEEDWELL" could do it!

British Oil & Turpentine Corp., Ltd., 55, Chancery Lane, W.C.

Motor Vehicles *for* Business Purposes——

ANY readers of "The Motor Cycle" who are concerned with motor vehicles for the carrying or delivery of goods, or are interested in transport undertakings of any kind, should study the pages of "MOTOR TRANSPORT" each week.

This journal deals in a practical manner with all aspects of motor haulage and delivery. It is equally useful to the owner of a single van or lorry as to those who own or control fleets of vehicles.

Reliable and helpful information is provided for users and prospective users of motor road transport, for operating engineers and for drivers and mechanics.

Among the subjects dealt with are—Costs of Running various types of motor vehicles for trade and industrial purposes; Descriptions and Illustrations of new vehicles, components, and accessories, Care and Maintenance of business vehicles; Practical Notes for drivers and mechanics; Motor Transport finance, legal matters, etc.

A consulting staff is at the service of readers to give advice and information, *free of cost* on all transport matters.

If you are interested write to-day for a FREE SPECIMEN COPY mentioning "The Motor Cycle."

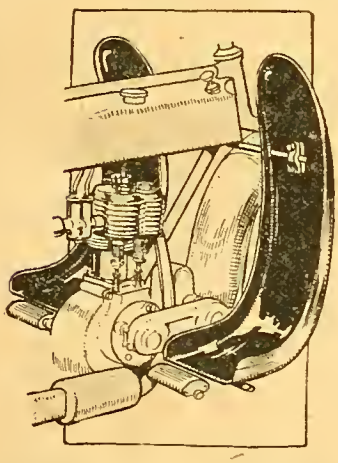
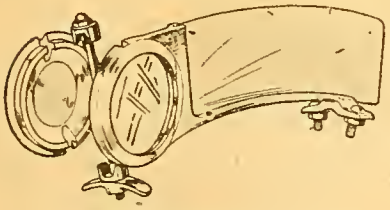
TOM DAVIES,



229, DEANSGATE, MANCHESTER.

Telephone—536 Central.

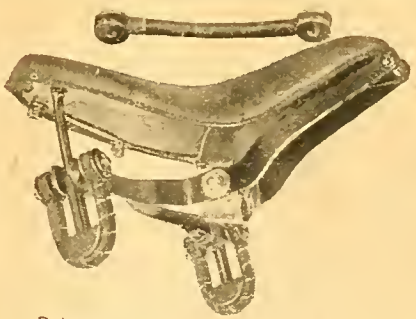


Quite one of the neatest licence holders on the market—the Homa. Strongly made, and possessing a screwed front, it is also entirely waterproof. It may be obtained in a variety of finishes from the Homa Engineering Co., Whetstone, Leicester.

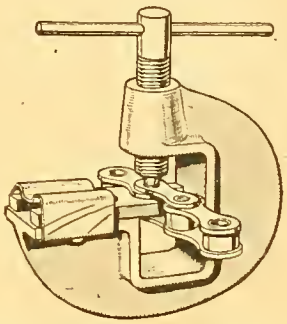
Legshields that harmonise with the outline of the machine—the V. and G. set, that is sold at 65s. by V. and G., Chapman Road, Small Heath, Birmingham

One long bolt ingeniously serves to clamp the licence holder together, as well as to provide a front anchorage to the mudguard of the New Scale combined number plate and licence carrier. This fitment is strongly made in aluminium, with an inserted steel plate, by Messrs. Roberts and Hibbs, Bank Street Works, Droylsden, Manchester. (Price 10s.)

Novelty in Saddle Construction.



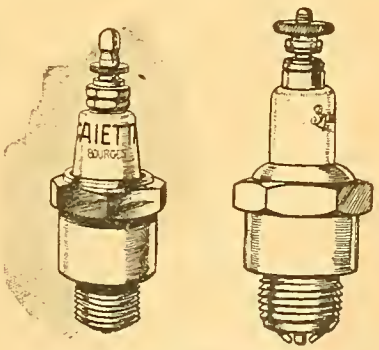
COMFORT is all the cry nowadays, and it is, therefore, not surprising to find several makers introducing novel ideas in saddle construction. Two of these, which we illustrate, have reached the marketing stage.



Coil springs form a very flexible backing for the seat portion of the Terry saddle.

Herbert Terry and Sons, Ltd., of Redditch, are spring specialists, and their saddle makes good use of their chief product. The framework, of fairly conventional outline, is suspended on two large coil springs, while the seat itself is built up by a series of light extension springs looped horizontally along the frame. A felt and waterproof, or felt and leather, cover is provided at option.

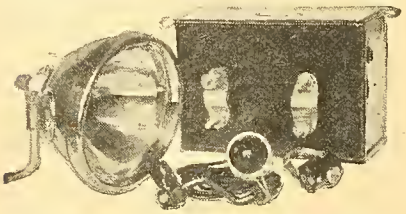
On the other hand, the saddle of the Industrial Rubber Products, Ltd. (191-2, Tottenham Court Road, London, W.1), is chiefly remarkable for the fact that no springs—at least, steel springs—are used in its construction. Very elastic rubber links, of the type employed for the suspension of aeroplane wheels, are substituted for the more conventional steel coils, and it is claimed that very easy riding is obtained. Should one of these "springs" break, replacement is the matter of a moment, as it simply means the removal of a couple of split pins.



Rubber "springs," one of which is shown detached, are used on the saddle of Industrial Rubber Products, Ltd.

Suitable for all makes and sizes of ½in and ⅝in. pitch chains, the Pennent rivet extractor is a moderately priced but well-finished instrument. (The Pennent Manufacturing Co., Ltd., Central Works, Watery Lane, Birmingham.)

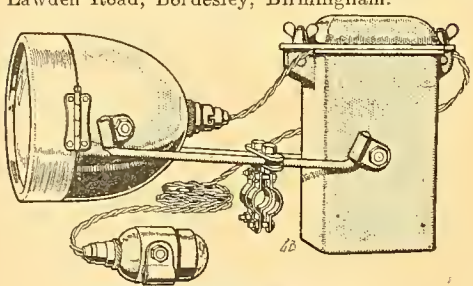
Extremely simple and neat is this hammock-pattern pillion seat marketed by Messrs. A. W. Gamage, Ltd., Holborn, London, E.C.1. How the canvas seat, which is mounted on rollers, yields against the light tension springs is easily understood from the picture.



Two recently introduced sparking plugs, which sell at moderate prices; on the left, the Gaietta (steatite insulation), which is sold by the Service Company, Ltd., 289, High Holborn, London, W.C., and on the right, a "Touring Model" Sphinx, made by the Sphinx Mfg. Co., Ltd., Bradford Street, Birmingham), which has a ceramic insulator.

Among the Accessories.—

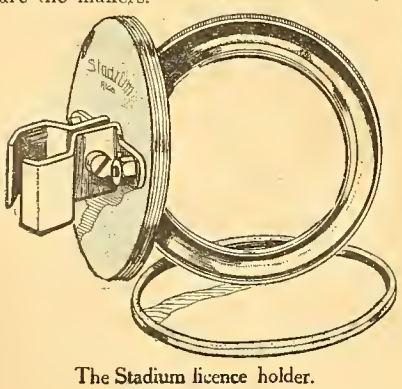
Solo Electric Lighting.



DRY battery or accumulator lighting is generally very simply fitted by the owner of a sidecar outfit, but the less fortunate solo rider has often to exercise considerable ingenuity before he can so equip his mount.

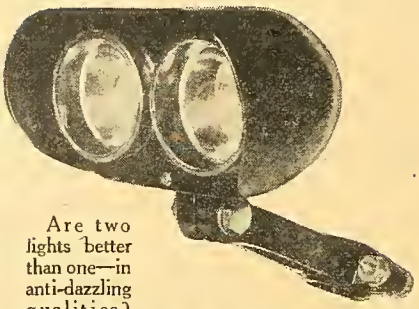
The accumulator of the H.A.H. set, illustrated below, is carried in a metal box designed to clip on to any convenient frame tube. A Hunt speedometer lamp, which is fitted with a blue anti-dazzle glass (already described in *The Motor Cycle*), may be supplied with this outfit, which is made by Messrs. A. H. Hunt, Ltd., H.A.H. Works, Tunstall Road, East Croydon, Surrey.

Including the speedometer lamp, this H.A.H. set has been designed specially for solo motor cycles.



In Westwood's Daybeam set the battery is carried in the position of the generator on an acetylene outfit. It is sold at £5 5s., including rear lamp and wiring, by Westwood Rim and Patents, Ltd., Lawden Road, Bordesley, Birmingham.

The Westwood Daybeam electric set.

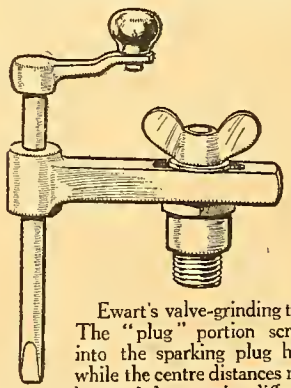


Damp-proof Holder.

BELONGING to the screw-on face category, the Stadium licence holder has the additional feature of a neat adjustable clip to fit any size or shape of tube or bar. Messrs. Etienne and Co., 61, Great Eastern Street, London, E.C.2, are the makers.

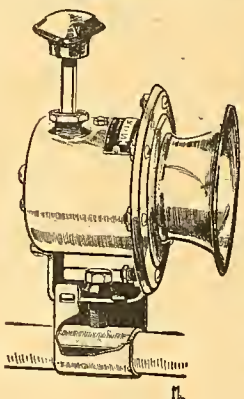
The Stadium licence holder.

ANTI-DAZZLE LAMPS.



Are two lights better than one—in anti-dazzling qualities? That they are is the idea of Scientific and Projections, Ltd., 5, Crawford Passage, Farringdon Road, London, E.C.1, who market the Screenlight electric head lamp shown above. A neat focussing device and an air and moisture-tight interior are commendable features.

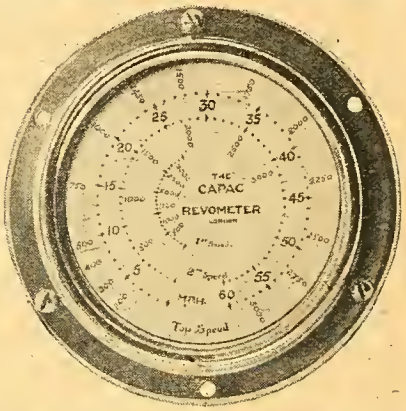
A LIGHTWEIGHT HORN.



A small edition of a well-known horn, the Dekla No. 14, which is specially made for lightweights, by Clayton-Wright Bros., 167, Hampton Street, Birmingham.

FOR GRINDING VALVES.

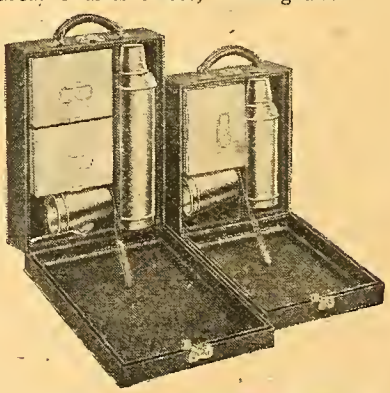
Ewart's valve-grinding tool. The "plug" portion screws into the sparking plug hole, while the centre distances may be varied to suit different engines. F. C. Ewart, 117, Wainwright St., Aston, Birmingham, is the maker.



AN IMPROVED HORN CLIP.

An improvement in the original mechanical horn (the Klaxon, made by the Klaxon Co., Ltd., 38-40, Blandford Street, Baker Street, London, W.1), a very neat one-bolt top tube clip.

Calculating Engine "Revs."



WERE every motor cyclist equipped with the Capac Revometer there would probably be fewer examples of bad driving to shock the eyes (and ears) of the mechanically-minded. This little gadget (no other word adequately describes it) consists of a graded scale, giving in figures the corresponding r.p.m. of the engine on the various gears at each speed as recorded by speedometer. Each dial is specially graduated to suit the gear ratios of the machine, and it may be obtained either as illustrated or with a special handle-bar clip. As the name indicates, this device is made by Capac, Ltd., of 2, Woodstock Street, Oxford Street, London, W., the manufacturers of the Capac automatic carburetter.

Just how fast the engine is turning over may now be found out at two glances—one at the speedometer and the other at the Capac revometer (above).

Picnic Case.

THESE neat cases, which contain flask and metal cases for sandwiches, will appeal both to the solo rider and sidecarist. Everyone who has carried Thermos flasks on a motor cycle knows how liable they are to crack if packed carelessly, and these cases, which prevent undue shaking, will in the long run prove an excellent investment. They are sold by Messrs. J. B. Brooks and Co., Ltd., Great Charles Street, Birmingham.

Picnic cases, containing flask and sandwich box, that have been specially designed for the motor cyclist by Messrs. J. B. Brooks and Co., Ltd., Birmingham.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

CHAIN LUBRICATION.

Sir,—Mr. Haselgrove invites the opinions of your readers on his lubrication device.

I would venture to suggest that some means of adjusting the revolving brush might in time be found necessary. As it is at present there is no way of doing this. It would be quite a simple matter to arrange it so that the brush could be raised or lowered, in order to get the right bearing on the chain; this would have to be done periodically, as the bristles would wear down and no longer touch the chain, and thus the brush would lie idle. H.S.P.

Osborne.

MOUNTS FOR DISABLED SOLO RIDERS.

Sir,—"Maimed" (Coatbridge) wishes to get in touch with a one-armed solo driver.

I lost my left arm in France (a high amputation), and I ride a 3½ h.p. solo Triumph, through all traffic; also on the "Prom." (at Southport) when it is packed with cars and carriages. The machine has never been arranged to suit my convenience.

I am confident that I can drive any make, and I am now about to purchase a 7-9 h.p. Indian. I control speed by the throttle, and I do not use footboards. Incidentally I can repair a puncture without any help. My last word to the one-armed is, "Be independent and have no fear."

J. MURRAY.

RETAINING OIL ON THE MAGNETO CHAIN.

Sir,—Referring to Mr. J. L. Willoughby's enquiry concerning noise caused by the magneto chain on the 1920 Villiers engine, I may say that I had the same trouble with a 2½ h.p. Villiers-engined Sparkbrook I owned last year.

I soon cured this annoying rattle, but not just by oiling about every 500 miles. I used to fill the whole of the magneto chain case with raw vaseline, and this proved a very effective chain silencer as well as lubricator. No doubt any other grease would prove equally satisfactory, graphite especially so.

I carry out the same process with my present machine—a 3½ h.p. P. and M.—and it is just as efficient as on the Villiers engine; in fact, the chain is scarcely audible even with one's ear close up to the case. T 9095.

Cullompton.

DAMAGE TO ROADS—A DEFENCE OF THE TRACTION ENGINE.

Sir,—On page 697 of *The Motor Cycle* there appear two photographs with a certain amount of print beneath them to which we take exception. We have driven traction engines for twelve and five years respectively; and also having had some little experience in driving and riding motor cars and cycles we feel we are capable of looking from several points of view at the statement, "Why private motorists are heavily taxed." Your correspondent's explanation is silly. We venture the suggestion that if in the future he feels tempted to spill ink he should think first, and then—think again. Two questions we would like to ask him, among others, are:

Why are there no tracks of engines or vans in the first photograph?

Are there no police in Stafford, and, if there are, would he kindly inform us if the crew who were with the engine he mentions have served their sentence out yet? Having been keen readers of *The Motor Cycle* for the last three years, we feel it would be unfair to you as Editor and to traction engine owners and users to let the statement pass without comment.

L. W. BARNETT.
J. S. BARNETT.

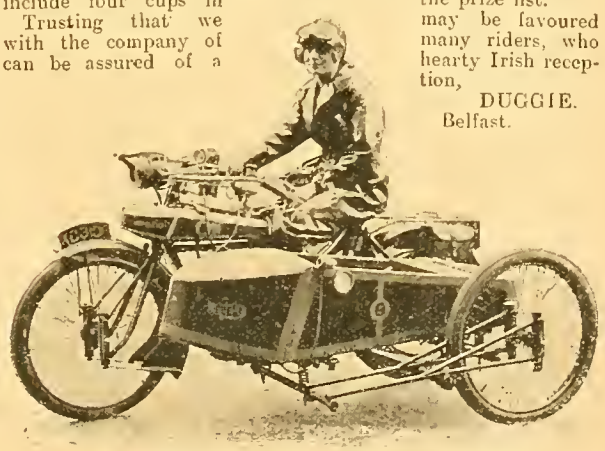
WANTED, AN ULTRA-NARROW SIDECAR.

Sir,—I want a sidecar outfit which will pass through a passage 53in. wide—not less than 4 h.p. chain drive Triumph preferred, but not essential.

I shall be very glad if any of your readers can give me some advice on this, as I know nothing of motors. I have measured several machines; none were less than 57in. wide over all. A.C.C.

London, S.E.18.

SPEEDMEN INVITED TO IRELAND



Sir,—As a member of the Ulster Motor Cycle Club, I often wonder why more of the speedmen on your side of the water do not pay us a visit. Ireland is a pretty place, and the motor cyclists here are hard to beat as good all-round sportsmen.

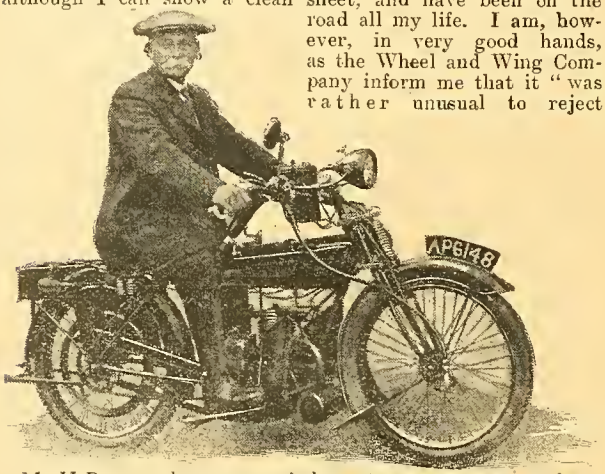
Visitors should have no fear of the troubles, which are much magnified by some newspapers. Of course, I am only referring to our northern corner. We ourselves, though troubled considerably by permits, etc., have our spare time fully filled by hill-climbs and speed and reliability trials.

I would particularly invite your *fastest* men to visit our Magilligan speed trials on July 15th and 16th. Magilligan lies on the coast about sixty miles north of Belfast, and is a fine, hard stretch of sand some eight miles long, and a great place for speeding. Last year we had the pleasure of George Dance's company, and I am sure he will agree with what I say. This year's two-day meeting will, I believe, include four cups in the prize list.

Trusting that we may be favoured with the company of many riders, who can be assured of a hearty Irish reception,

DUGGIE.
Belfast.

PRESERVING A DISTINCTIVE CONTOUR.



This idea of designing the sidecar body to conform with the contour and colour scheme of the tank would not pan out at all so nicely on many machines as it does in this instance. The outfit—a Wooler—was snapped recently in Richmond Park. It will be noted that the sidecar wheel is sprung in the same manner as the bicycle.

ATTRACTING THE MAN AHEAD.

Sir,—Might I suggest that a new motor signal be devised for communicating with riders ahead? On several occasions recently I have observed small articles, such as straps, rear lamps, etc., fall from motor cycles, and as I drive a sidecar with a fairly heavy load my only method of informing the riders of the fact has been to "blind" until they were overtaken and told. Unfortunately the invariable result of sounding one's horn in such cases is the rapid disappearance of the solo rider in a cloud of dust! Last week I saw a rear lamp fall from a motor cycle at 9 p.m. The rider had every appearance of being on a long journey, but on my "bellowing" with my Klaxon he streaked off as though chased by Satan. When he came to light up he and his lamp would be miles apart. GEORGE ALDERSON.

IS THERE AN AGE LIMIT?

Sir,—Owing to my age (68), both the A.A. and the A.C.U. have refused my insurance, and, of course, membership, although I can show a clean sheet, and have been on the road all my life. I am, however, in very good hands, as the Wheel and Wing Company inform me that it "was rather unusual to reject

Mr. H. Bourne, whose comparatively youthful appearance somewhat belies his sixty-eight years, explains the cause in his letter.

an insurance on the grounds of age." This company took me on at once and most kindly sent me a covering note even before I had sent them any money! I enclose a photograph in order that you can see for yourself that I am pretty fit and quite active for a man of my years. I might add that I thought it my duty to give up riding during the war. HENRY BOURNE.

ELECTRICAL PHENOMENON.

Sir,—With reference to the correspondence in your columns concerning the effect of coiling the high-tension cable, I hope to show that the effect on the spark is negligible.

The resistance of the coiled lead, assuming that all the factors have a maximum value, will be given by the formula $E = 2\pi f c L$.

When E = EMF of self-induction, opposing the spark EMF.
f = frequency of circuit.
L = coefficient of self-induction of the coiled lead.

Then $E = 2\pi \times \frac{4,000}{60} \times .001 \times .005.$

$\therefore E = 6.282 \times 66.66 \times .000005.$

$\therefore E = .00204$ volt.

In the above, the frequency per second I have taken as $\frac{4,000}{60}$ (r.p.m. of engine divided by 60).

The current is so minute that to approximate to it I divided the watts in the primary by the approximate voltage in the secondary $= \frac{10}{10,000} = .001$, which, of course, is much on the large side.

The coefficient of self-induction of the coil has been taken as .005, although it could not possibly be as high as this. Result, the opposing EMF will be less than .002 volt from the, say, 10,000 volts of the high-tension circuit, as they are not necessarily in phase. For a twin-cylinder engine the result may possibly be taken as doubled; but, in any case, I think this proves that the coiling of the lead is insignificant unless the turns run into thousands and the factor .005 in the formula is increased somewhat. CONN ROD.

Newcastle.

Sir,—In reply to the letter from Mr. F. E. Schofield in your issue of June 9th, we note that coiling the high-tension cable twenty times round an iron core did not affect the firing of his motor cycle engine. Mr. Schofield does not say whether the iron core was insulated or connected to the frame of his motor cycle. The core being "earthed," as in the original experiment described by Mr. N. W. Benley, would increase the resistance to the spark as compared to a similar arrangement of wires but with the metal core insulated.

Of course, even if the wiring were precisely the same as in the original experiment, it is quite possible that no misfiring might be experienced, because the low speed output from different makes of magnetos varies considerably.

LODGE PLUGS, LTD.

FROM THE MECHANICAL ENGINEER'S POINT OF VIEW.

Sir,—I should like to say a few words in reply to "Draughtsman's" rather scathing letter in your issue of June 2nd. As a motor cyclist of nineteen years' experience, and also a qualified mechanical engineer, I have no hesitation in saying that the majority of present-day designers of motor cycles are just as efficient at their job as are designers in any other branch of engineering. Unfortunately, their "style is cramped," so to speak, by the lack of even very elementary technical knowledge possessed by the majority of present-day motor cyclists. Sad, but true! The old hub ball race has, after twenty years of continual ill-use and neglect, proved reasonably efficient, and very simple. Hence its retention. If "Draughtsman" can design a bearing more efficient and equally simple, why does he not do so, and make his fortune?

As regards "Draughtsman's" remarks about transmission, I would point out to him that it was, and still is, a common occurrence to see cars with broken propeller-shafts and stripped driving or crown pinions. When a car does this it is a serious matter, but when a bicycle breaks a chain it is a ten minutes' job. He has, of course, omitted the comparison of power to weight ratios.

I heartily agree, as I think most experienced motor cyclists will, that motor cycles have still a long way to go, but I would remind "Draughtsman" that the best way to effect this is not by destructive criticism, so often born of ignorance, but by solid work. His remark about two-strokes shows an ignorance of this "breed" of cycle which does not do him credit.

I have no connection with any branch of the motor trade.

St. Andrews. AILERON.

Sir,—Your correspondent "Draughtsman" should be encouraged. His suggestions as to the correct manner of designing a motor cycle, and also how to "improve the breed," are truly remarkable, and no doubt our manufacturers will sit up and take notice.

It is a matter of serious moment if our eminent designers are incapable of designing a hub suitable for carrying journal ball bearings—but we feel quite happy, knowing full well that such is not the case.

"Draughtsman" should note that in the common cup and cone hub, the cups are pushed into the shell in the same manner as a journal ball race would be, the super-technical skill would appear to be quite unnecessary to design a journal hub when one bears in mind that some makes of hub can be stripped of their cups, and these may at once be replaced with journal bearings.

It is simply a matter of finding a ball race of the same outside diameter as the hub shell, and having fitted the race's hub trouble ends.

We take this opportunity of informing your correspondent and any others who may be interested that we make a speciality of fitting existing cup and cone systems with self-aligning ball races, and our efforts have been attended with complete success in every case of conversion.

THE PELICAN ENGINEERING CO.

'WARE MOTOR CYCLE THIEVES.

Sir,—May I, as a victim, warn your readers against the alarming increase in daring motor cycle robberies in London? The theft of machines is rapidly being developed into a fine art.

During the afternoon of Derby Day my 4 h.p. Triumph (late 1918, clutch and kick-starter, engine number 58146 E.T.H., frame number 287204) was left by a mechanic for a few minutes in an enclosure in front of Sell's Garage in Rosendale Road, West Dulwich, and when he returned it had vanished.

When the machine was taken the oil feed pipe had been removed for repair, so that before the person had ridden a mile his boots would be smothered in oil forced out of the engine, and he would in consequence be very conspicuous, especially to those who saw him finish his ride.

I should be very grateful to any fellow motor cyclist who can give me any information which may help in the recovery of the machine. My gratitude would take the form of a substantial reward. W. J. RIX.

[Any information will be forwarded by us to our correspondent.—ED.]

AIR-COOLING AND OIL-COOLING.

Sir,—Mr. Bradshaw's article was most instructive and interesting; but perhaps he, or someone else, will answer the problem as it appears to me.

If an engine is to be thoroughly reliable under all conditions, it must be able to withstand hard usage under the severest conditions of all. These I take to be a stiff hill, which makes low gear absolutely necessary, a light following and hot breeze of about the same speed as the machine, and the hottest of hot days.

If the hill is long, the water-cooled engine would boil its water away, unless a very powerful fan was used. The air-cooled engine would depend on radiation and pure convection currents of the air as set up by the heat; unless again a sufficiently powerful fan was used. My question is, "Can the air-cooled engine be so designed to keep sufficiently cool under these conditions without a fan?" Probably vertical fins would be more useful in this case.

The oil-cooled engine also depends upon the air for keeping the oil cool; would this fare any better under such conditions? R.E.C.

Ilfracombe.

THE CHAIN DRIVE TRIUMPH ON THE ROAD.

Sir,—Your article on this machine was most interesting, but I do not think the writer was either kind or unkind enough. May I mention the following points:

CHAIN DRIVE.—The spring drive is delightful. The more one rides the machine the greater becomes one's appreciation. It is sweeter than a belt drive.

FRONT CHAIN CASE.—This is the only chain case I have ever had which does not let dirt in. The oil is perfectly clean, and just as poured out of the can.

GEAR BOX.—I am very sore about this. It is impossible *(a)* to change down without lifting the exhaust, *(b)* to change into neutral from any gear without stopping the engine when the machine is stationary. The idea of using the exhaust to change down is hopeless. One wants to accelerate the engine—not slow it. (I must explain that one cannot get a neutral position, between top and second; or, of course, changing could be done very well on the exhaust *à la* Douglas method.) It is extraordinary that a firm of such eminence should produce such an arrangement.

DECOMPRESSOR.—Mine only works occasionally, but my real grumble is that oil creeps down the small toe-operated lever and ruins one's shoes. The decompressor has to be taken to pieces to remove the timing cover. There is no tool (I believe) provided for this job. A special one is necessary. If firms persist in using quaint screwheads they should at least provide the wherewithal to manipulate them.

Whilst speaking of tools, I think one of the best remarks ever made appears in the A.B.C. instruction book. "An adjustable spanner is an emergency tool." Most motor cycle manufacturers provide *set* spanners (if any), which should certainly be used in a very serious emergency only, and then only with great care! One belonging to my 'bus would make an excellent jigsaw puzzle if cut into quite a few pieces.

FOOT BRAKE.—This is excellent, but the operating lever is most inconveniently placed, and, in spite of footrest adjustment, fouls one's leg. This is very unpleasant on bad roads (the adjective is hardly necessary), also one's foot is very liable to slip off the lever, which is much too small.

INLET VALVE.—I cannot remove mine without shifting the gear quadrant or cylinder.

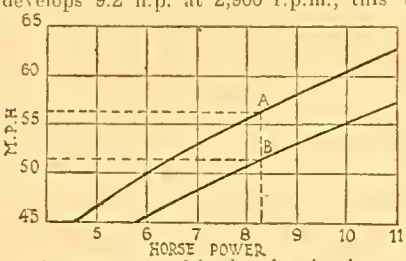
VALVE GEAR.—This is terribly noisy.

GEAR RATIO.—I use my machine solo, and was very surprised to find that I could not get a higher top ratio than $4\frac{3}{4}$ to 1. This is too low for comfort.

PETROL.—As delivered, the 'bus did about 90 m.p.g. I have knocked the jet up and get 125 m.p.g. regularly at an average speed of 30 m.p.h. The tank is too small—"as it was in the beginning," I suppose!

PETROL INJECTING TAP.—This remains free for 200 miles. The bore is too small. An excellent stunt for boring out the carbon is to open out a split pin and use it as a "D" drill. I over-oil habitually.

SPEED.—I have yet to find a road on which I can let the engine out. On my small jet it has done 49 m.p.h. per Bonniksen, and had something in hand. I expect many of your readers will laugh at this, but not those who do most of their riding in Staffordshire.



In conclusion, I wish to say that I have the very greatest respect for the Triumph Company's products. I always return to a Triumph after becoming "fed up" with working in the garage.

The firm has kindly promised to alter my gear box when I can spare the machine. C. H. STEPHENSON.

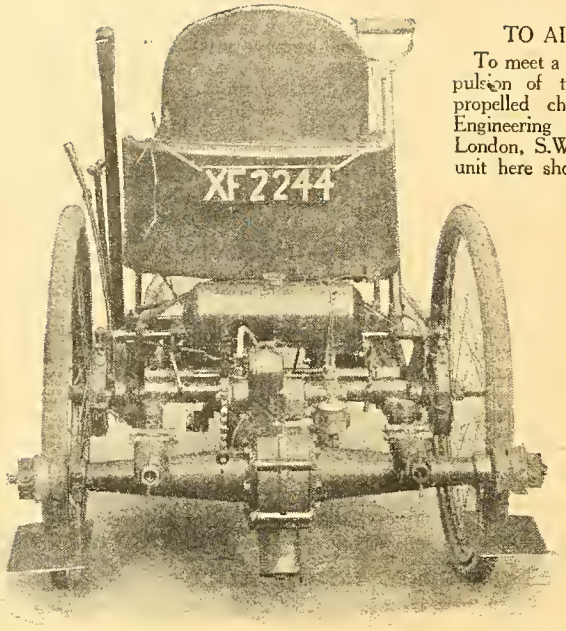
MAXIMUM SPEED OF THE ALL-CHAIN TRIUMPH.

Sir,—In your issue of the 26th ult., Mr. Clifford Atcherley disputes your contributor's statements in regard to the speed of the 4 h.p. Triumph. A good deal might be written on both sides of the question, but from basic facts there is no getting away.

According to recent tests, the *standard* Triumph engine develops 9.2 h.p. at 2,900 r.p.m., this being the peak of the curve (a comparatively low speed at which to develop maximum power).

In these curves speed is plotted against horse-power. "A" only applies where wind resistance is reduced to a minimum.

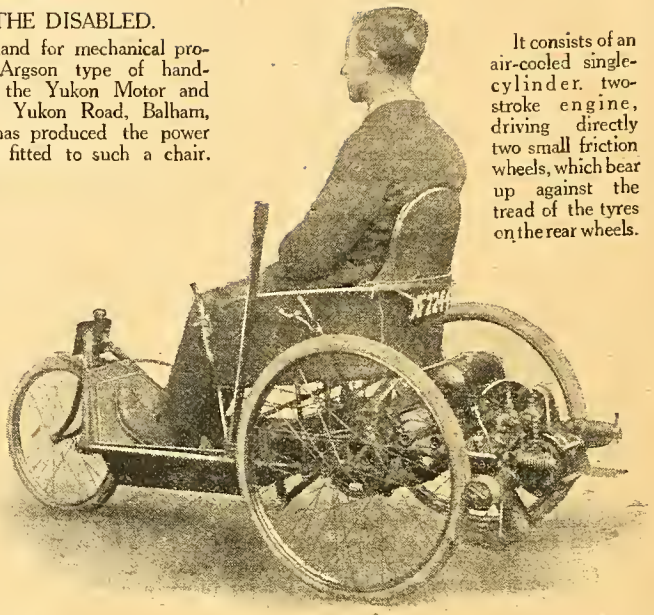
Now, in the accompanying curves, speed is plotted against horse-power. The curve A applies only when low bars are used and the rider is crouching low over them; curve B is for the ordinary touring position.



Now, allowing an efficiency of 90% for the Triumph transmission (a generous figure), we have 8.28 (say 8.3) h.p. available at the back wheel. This in the case of curve A gives us about 56.5 m.p.h., not more (probably less in practice, owing to the perfect surface on which the experiments, to build the formula, were conducted).

In the case of curve B 51.5 m.p.h. would be a liberal estimate of the speed. From this it will be seen that under the most favourable conditions, with the engine in tip-top condition and tune, a standard Triumph has a maximum speed of between 51.5 and 56.5 m.p.h. Shall we take the mean 54 m.p.h.? Then the necessary gear ratio with a 28in. wheel is slightly over 4.5 to 1.

Let us see how this is borne out in practice. In the inter-'Varsity trials (held a short while ago at Harling Common), 750 c.c. class, 4 h.p. Triumphs took first, second, and third places, and their speeds were 63.54 m.p.h., 53.5 m.p.h., and 53.0 m.p.h. respectively. The machine gaining first place was, I suggest, not standard in *every* respect. (Perhaps Mr. C. Moser will correct me if I am wrong?) The speeds of the second and third machines are very close to the average of our maximum speeds obtained from the curves, and they were, I suggest, standard machines in very good tune.



Seeing this, I think we may safely assume that very few standard Triumphs on the road can exceed 50 m.p.h.

What curves and formulæ I have used are those used by Mr. D. S. Heather, B.Sc., A.M.I.A.E., one of the most prominent of our designers, and are consequently indisputable. L. W. G. HARTLEY.

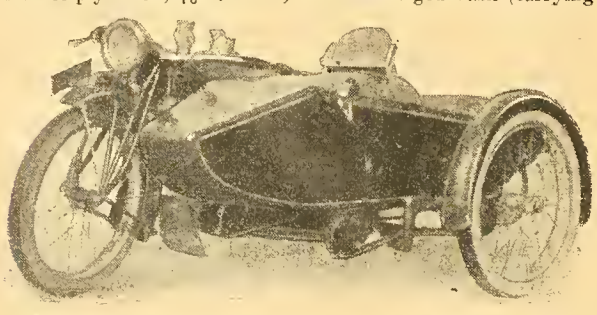
TO AID THE DISABLED.

To meet a demand for mechanical propulsion of the Argson type of hand-propelled chair, the Yukon Motor and Engineering Co., Yukon Road, Balham, London, S.W., has produced the power unit here shown fitted to such a chair.

It consists of an air-cooled single-cylinder, two-stroke engine, driving directly two small friction wheels, which bear up against the tread of the tyres on the rear wheels.

RETAINING OIL ON THE MAGNETO CHAIN.

Sir,—May I state that for some time I was troubled by this complaint (chain rattle), which marred an otherwise perfect machine.

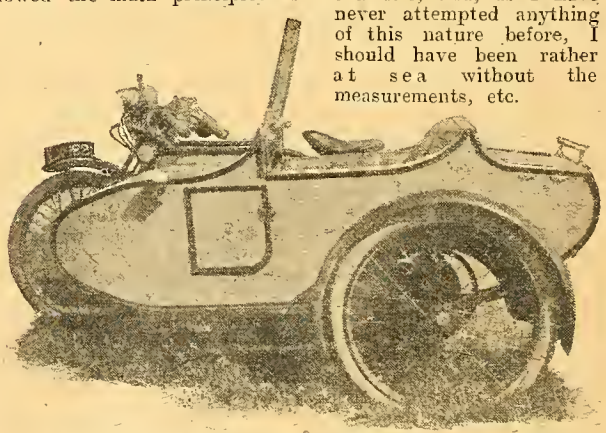


Like "J.L.W.," I tightened up the chain, but the result was failure, as the rattle was converted into a bad mechanical click. Taking off the cover, I found the edges of the chain links covered with aluminium dust, and on looking at the casing found the chain had ploughed a deep groove in the pieces projecting inwards on which "Villiers" is cast. On filing off this groove the rattle disappeared, and the machine runs perfectly. This is the only fault I have found, and the makers might remedy this by fixing a cover with more clearance and without the inward projections.

As regards the chains running dry, if Mr. Willoughby will take off both magneto and driving chains and clean them well in paraffin, and get some mutton fat and melt it in an old tin and then "fry" the chains in it for a few minutes, rubbing off the fat when cold, I think his chain troubles will be ended. I never use grease on the outside of my chains, only applying the above method from time to time, and I have no chain troubles at all. BC 3559.

Leicester.

HOME-MADE SIDECARS.



Sir,—I enclose herewith photographs of my 7-9 h.p. Indian and sidecar with which I obtained the prize for the smartest and best equipped motor cycle in the Glasgow Western M.C.C.'s opening social run. The sidecar is entirely home-made. The framework is constructed of 1×1in. ash to suit the Millford Indian sidecar chassis. The panelling consists of three-ply wood, $\frac{1}{16}$in. thick, and the hinged dash (carrying the aeroplane windscreen and dash lamp and switch) is also of the above materials. The locker on the rear has a framework of 1×1in., and is covered with three-ply $\frac{1}{4}$in. thick, with three corrugated rubber strips for luggage. The seat is on the floor, which is $\frac{3}{8}$in. thick, and carries a large cushion. The back is padded, as also are the sides and arm rests, and all are covered with green American cloth. The locker is fitted with a lock and has ample accommodation for spare tube, repair outfits, spare set of chains, pump, half-gallon tin of oil, and tool rolls, etc. The weight is about half that of the standard Indian body. G. HOPE WILSON.

This sidecar, the body of which was made entirely at home by its owner, Mr. G. Hope Wilson, obtained the prize for the smartest and best equipped outfit in the opening run of the Glasgow Western M.C.C.

Sir,—I am enclosing photographs of a sidecar body made by myself from the instructions in an article on "How to Make a Sidecar Body," which appeared in *The Motor Cycle* some months ago.

Although I have not emulated the design exactly, I followed the main principles in the article, and, as I have never attempted anything of this nature before, I should have been rather at sea without the measurements, etc.

Mr. J. R. Woods, whose letter appears on this page, made this handsome sidecar body himself, helped by an article in *The Motor Cycle* some months ago on this subject.

I found the hints on lining particularly useful, and I was able to line the body in Triumph colours without trouble.

The windscreen is a piece of plate glass mounted in the frame of a small aero windscreen, cut in two, and the rail at the back is a towel rail which cost a shilling. Another shilling bought the transfer monogram which is on the door.

Including all fittings, and upholstered in Rexine, the cost was roughly £5. Also it has been a very pleasant occupation during the winter evenings. J. R. WOODS.

T. T.

LAP RECORD SMASHED

by F. G. Edmond on the "Triumph,"

fitted with

LODGE

PLUGS

in 40 mins. 8 secs.

Average speed 56·4 miles per hour.

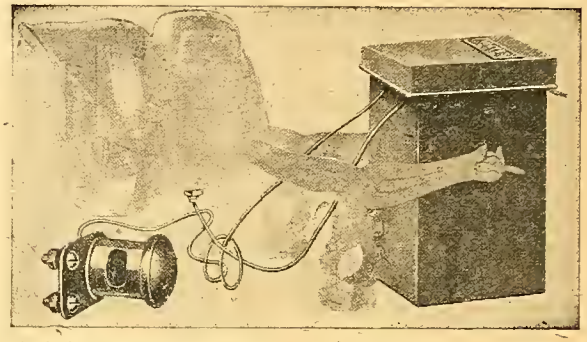
This is the fastest lap ever done in the island, and beats the previous record by more than ten minutes.

Everybody cannot win a Tourist's Trophy, but it is within the means of every motor cyclist to have a "tourist trophy" of his own in a SHEFFIELD HENDERSON Motor Cycle Combination.

A high-grade machine, plenty of power with the world famous HENDERSON SIDECAR, luxurious and efficient—all at **£150 : 0 : 0** ready for the road—is an offer which must tempt every motor cycling enthusiast.

Think of the thousands of miles of care-free running! Think of the low petrol consumption! Think of the power on hills and then ask yourself whether you can get similar efficiency, similar comfort and similar power for anything like the figure.

Ask your local dealer for full particulars and if he cannot supply them, write direct to us and we shall be happy to put you in touch with the Sheffield Henderson Agent nearest you.



HENDERSON MOTORS, Ltd.,

Aero Works,

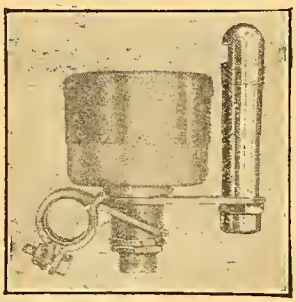
73, Fitzwilliam Street, SHEFFIELD.

Having a surplus stock of disc wheels we are willing to supply same at the price of one guinea per set. When ordering please state size of sidecar wheel.

ELECTRIC LIGHTING FOR EVERY MOTOR CYCLIST.

ACCUMULATOR CONVERSION SET PRICE £2 Post Free

DESCRIPTION—A strong metal box with hinged lid and well-made switch that fits on the existing acetylene head lamp bracket. The box contains a 4-volt accumulator capable of lighting head and tail lamps for eight hours continuously with one charge. A specially designed adaptor fitted with bayonet cap lamp replaces the acetylene burner in head lamp. A complete tail lamp is supplied together with screws for fixing it to the back number plate. Both lamps are fitted with suitable lengths of flexible connecting wire for connecting up to the battery box. No additional cost above the £2 0 0 is required to install the set in working order. The following list of standard acetylene lighting sets will give an idea of the type of brackets suitable for holding the battery box.



Powell & Hanmer lamp Nos. 127H.B., 127S.B., 128H.B., 12S.B., 125H.B., 140H.B. Miller Lamp Nos. 29H., 31H., 24S., 22H., Lucas Lamp Nos. 462, 341, 331. **TRADE ENQUIRIES INVITED.**

WATES BROS., 132, Charing Cross Rd., W.C.2.

'Phone: Gerrard. 576.

COWEY

Speedometer Lamp

A neat attachment, by which a rider at night can read both speed and mileage—the latter being essential for regulating the oil supply to the engine. It is operated by merely pressing the top—the dry battery is self-contained, and can be easily removed for replacement.

By simply twisting the top, the front portion of the lamp can also be used for reading the time, should a watch be fixed near the speedometer.

Supplied in Nickel or Black - Price 20/-

Spare dry batteries, 1/6 each including postage.

The lamp is beautifully finished, and the effect of the combination is very striking.

COWEY ENGINEERING CO., LTD.

ARCHER WORKS, KEW GARDENS, SURREY

Telephone: Richmond 447 & 468. Telegrams: "Cowey, Kew Gardens."

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

COST OF RUNNING SINGLE OR TWIN.

[?] What are the proportionate running costs between a 6 h.p. twin and 4¼ h.p. single?—A.L.G.

There is probably no appreciable difference in the running cost of the two types of machine mentioned; the actual economy of the single-cylinder engine is possibly counterbalanced by the saving of tyres and transmission resulting upon the smooth torque of the twin.

WELDING FRAME LUGS.

[?] I find that there is a small fracture in the head lug stamping of my 1916 Royal Ruby cycle (which I obtained second-hand). The crack does not extend right into the tube, but the break appears to have been partly mended by a "liner" inserted in the down tube of the frame. What I want to know is, could this fracture be satisfactorily mended by oxy-acetylene welding, or should I get a new frame from the makers?—H.E.F.

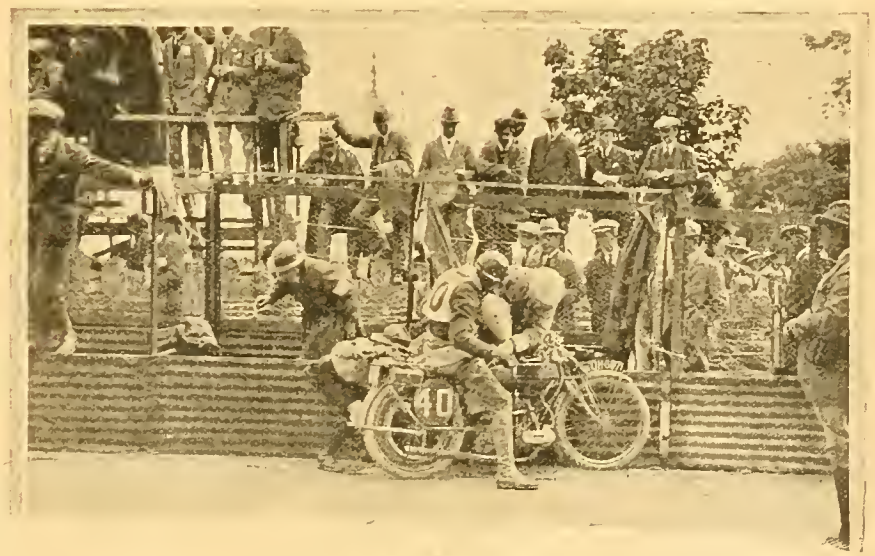
Acetylene welding is not usually satisfactory on motor cycle frame lugs, which are generally malleable castings. If the head lug of your machine, however, is a steel stamping, it will be quite possible to have it repaired by this method; otherwise, we would advise you to return the frame to the makers, as they could fit a new lug.

SIDECAR AXLES.

[?] Is a sidecar with the enclosed type of wheel safer than the open wheel? I am purchasing a 6 h.p. machine, and the sidecar supplied by the makers is an open wheel. The sidecar attached to my present machine (4¼ h.p. B.S.A.) has an enclosed wheel, which seems to me to be less liable to accidents. Is the risk sufficient to justify the purchase of another make of sidecar with an enclosed wheel rather than the sidecar supplied by the makers without?—A.L.G.

Presumably by "enclosed type of sidecar wheel" you mean a wheel supported on the outer end of the spindle by an encircling portion of the chassis. Certainly this type of sidecar has decided advantages in the way of safety and strength, but the usual pattern with the wheel spindle supported only at one side is quite satisfactory, and there is no reason why you should refuse the sidecar so designed.

CORRECTING BALANCE.



[?] My machine is a 1914 Blackburne, and a short while ago I fitted a new piston and connecting rod, which was much lighter than the makers' old one. At any speed over twenty miles per hour there is a good deal of vibration, caused, I suppose, by the engine balance being upset. Will you advise me how to re-balance it? (1.) Could I drill the balance weights? If so, should I have to lighten them the difference between the old and new piston? (2.) Is it possible to weight the new piston up to the weight of the old one?—W.H.S.

(1.) You will have to take out approximately half the difference between the weights of the new and old reciprocating parts. (2.) It is not advisable to attempt to add weights to the piston.

GEAR CHANGING METHODS.

[?] I have just purchased a 4 h.p. motor cycle, fitted with Sturmey-Archer three-speed countershaft gear box, clutch, and kick-starter. (1.) What is the correct method of changing gear, *i.e.*, whether by use of clutch or exhaust valve lifter? Some motor cyclists advise me to use the latter, as it saves unnecessary wear of the clutch plates. (2.) Should one accelerate when changing up from low to middle or top gear, and *vice versa* when changing down? (3.) Is it advisable to pull straight through from low to top?—R.J.P.

(1.) It is really immaterial which method you use; our own preference with this type of gear box is to change up on the exhaust lifter, as a very quick change can be made. When changing down it is not necessary either to release the clutch or raise the exhaust: merely throttle down slightly, and move the gear lever smartly to the next lower position, but a smoother change down may be made on the clutch, especially on a greasy surface. (2.) Accelerate the machine when changing from low to middle and from middle to top, but do not allow the engine to race unnecessarily. When changing down, reduce the engine speed somewhat as soon as the lower gear is engaged, unless you are climbing a steep hill. (3.) It is not advisable to change directly from low to top: indeed, this should never be done except in exceptional circumstances.

IN THE JUNIOR T.T.

At the replenishment depot—where often races are lost or won—Jack Holroyd (2¾ Massey-Arran) is amazed at how slowly the petrol runs through such a large funnel! 'ust what the Boy Scout is so busy at is rather a mystery.

OVERHAULED MACHINE WILL NOT PULL

An old type 3½ h.p. motor cycle, the cylinder of which I have had bored and new piston rings fitted. It has the latest type carburetter, with a No. 33 jet and a C.A.V. magneto which is running at engine speed. The valves and magneto are timed correctly, and the engine has very good compression, but it will not pull up a small hill, although I can get good speed on the level. Can you explain the cause of this lack of power?—H.C.N.

The details you give are very vague and quite insufficient to enable a complete diagnosis to be made. It is quite possible that the ignition timing is too far advanced; in any case, it may be necessary to retard when hill-climbing. As a new piston has been fitted into the rebored cylinder the parts may not be properly run in, and no doubt the power will improve after the machine has covered from 300 to 500 miles.

EXPERIENCES WANTED.

"J.K." (Stockport).—10 h.p. Morgan-M.A.G.: Maximum m.p.g., flexibility, and most suitable carburetter.

"A.J.C.F." (Littlehampton).—Coventry Premier runabout: Speed on hills compared with powerful sidecar outfit, accessibility of rear wheel, cooling on hilly roads, general maintenance.

READERS' REPLIES.

AN OBSOLETE MODEL.

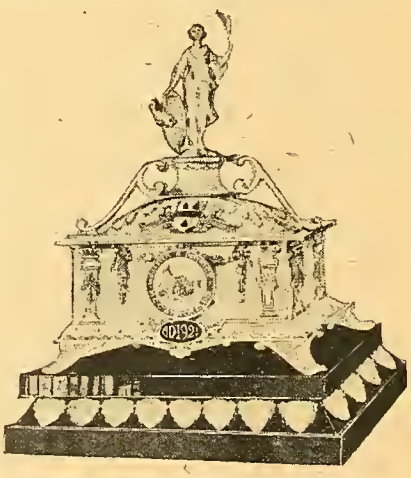
Your correspondent, "B.S.," in the issue of June 2nd, who is asking where he can obtain a connecting rod for his 3½ h.p. Minerva, might be interested to know that the Ellenborough Engineering Works at Ellenborough Road, Wood Green, London, N., make and stock anything in cast iron for Minervas, so possibly he would be able to obtain what he wants from them.—W. F. KING.

RECOMMENDED ROUTES.

LIVERPOOL TO NEWCASTLE-ON-TYNE.—R.E.C.

Liverpool, Maghull, Ormskirk, Burscough Bridge, Rufford, Tarleton, Longton, Preston, Mellor Brook, Whalley, Clitheroe, Gisburn, Skipton, Bolton Bridge, Blubberhouses, Killinghall, Ripley, Ripon, Leeming, Catterick, Scotch Corner, Darlington, Aycliffe, Ferryhill, Durham, Chester-le-Street, Newcastle-on-Tyne. Approximately 161½ miles.

HEATHFIELD TO OXFORD.—W.T.F.



Heathfield, Maresfield, East Grinstead, Blindley Heath, Bletchingley, Redhill, Reigate, Burgh Heath, Ewell, Surbiton, Kingston-on-Thames, Hampton Court, Hampton, Sunbury Common, Staines, Windsor, Eton, (edge of) Slough, Salthill, Maidenhead, Henley, Nettlebed, Benson, Shillingford, Dorchester, Nuneham Courtenay, Littlemore, Oxford. Approximately 103 miles.

MUSWELL HILL TO EVESHAM.—H.W.

Muswell Hill, Barnet, St. Albans, St. Michael's Church, Leverstock Green, Boxmoor Church, Berkhampsted, Northchurch, Tring, Aston Clinton, Aylesbury, Hartwell, Stone, Thame, Wheatley, Oxford, Woodstock, Chipping Norton, Moreton-in-Marsh, Bourton-on-the-Hill, Blockley, Broad Campden, Chipping Campden, Aston-sub-Edge, Weston-sub-Edge, Willersey, Broadway, Evesham. Approximately 104 miles.

Important Dates.

The design for the Worcester and District M.C.C. and Worcester M.C.'s Championship Trophy, for which members of both clubs will be equally eligible. The club champion will hold the trophy for one year, and gain a replica, which he will retain.

SPARKLETS

Leather Belts.

Those who retain a preference for leather belting will be interested to know that the sole agency for the Scellos belt, a French production, and very popular in that country, is held by Arthur Dinham, 20, Hamlet Street, Blackburn.

Martinsyde Developments.

A new programme for the production of the 8 h.p. Martinsyde sidecar outfits is now arranged, and 1921 models are available for immediate delivery; the 3½ h.p. sporting model is nearing the end of its experimental tests, and it will be produced in the near future.

Work for the Disabled.

Most motor cyclists are familiar with the Robbialac display stands exhibited in agents' windows, and it is pleasing to learn that these are produced in the Lord Roberts Memorial Workshops for Disabled Soldiers and Sailors.

Dot Price Reductions.

An all-round price reduction of Dot machines took force from the beginning of this month. The 8 h.p. Dot-Jap sidecar outfit is now £185 (formerly £200), while the 2¾ h.p. solo model with two-speed gear and kick-starter is reduced from £89 5s. to £80.

Catalogues Received.

James Grose, Ltd., 4, Old Jewry, Cheapside, London, E.C.: To the rider with a mechanical turn of mind, and fond of effecting adjustments and adding fitments to his machine, no more attractive catalogue can be imagined than the accessories list published by this house. It is packed with descriptions of parts, accessories, and tools, most of them moderately priced.

Dekla, Ltd., Dekla House, 168, Hampton Street, Birmingham: A small list, including various models of Dekla horns and the Handy inexhaustible flash lamp.

Rudge-Whitworth, Ltd., Coventry: Both pedal cycles and motor cycles are listed together in the new Rudge catalogue, which contains illustrations and specifications of all the leading models.

Royal Ruby Cycle Co., Ltd., Altrincham: One of the most complete and best illustrated catalogues we have yet seen. The line drawings of the interesting features—many reproduced previously in *The Motor Cycle*—should be especially valuable, as they help the rider to understand his machine and to effect such adjustments as may be required from time to time.

Humber, Ltd., Coventry: The catalogue of the Humber flat twin motor cycle embodies an instruction booklet also. It is well produced, clearly written, and thoroughly illustrated. One point for riders to note is that the oil sump only holds sufficient lubricant for sixty miles.

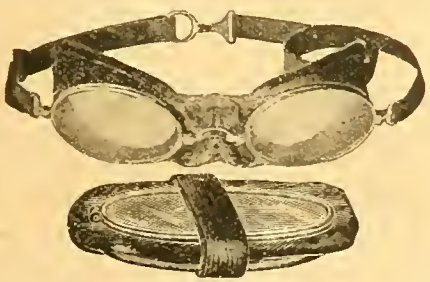
AC

Sparking Plugs Aid Two Gold Medal Winners

In the London-Edinburgh Motor Cycle Run, AC Sparking Plugs were fitted to the machines of two Gold Medal winners—Mr. R. B. Clark and Mr. G. Pigott. "Although the plugs were used in an oily engine, they gave no trouble whatsoever," writes Mr. Pigott. AC Carbon Proof Plugs save trouble by eliminating need of cleaning, misfiring, and short circuits.

AC Brands are: AC Titan, AC Carbon Proof and AC Two-Piece.

Obtainable from leading dealers and garages. Price 5/-.



AC SPARKING PLUG CO., LTD., 1-4, Thurloe Place, London, S.W.7

Read what this Colmore Customer Says

Braintree, Essex.
May 26th, 1921.

Dear Sirs,

I want to thank you for your extreme courtesy and promptness in supplying me with a two-stroke Clyno. As you know, I only made my enquiry on a postcard on Friday, the 20th inst., and had a reply by return, i.e. Sunday morning, the 22nd. I suppose I should have been able to have had the machine two days ago, but it took me 48 hours to make up my mind. The machine arrived at Braintree station to-day at one fifty, and was in extremely good condition. Perhaps it would interest you to know that I tried to buy a motor cycle in London, ... Street, but met with such extreme discourtesy on the part of salesmen, that I determined to give London and its "superior" salesmen the "go by."

Yours faithfully,
E.G.

And this letter explains *why* Customers come to us from all parts of the country. Those who have once had dealings with us come again and again, and more—they don't forget to let their friends know that at the Colmore Depot there is nothing too much trouble, there is a promptitude and attention to every motor cyclist's need which cannot be rivalled elsewhere.

Note the comprehensive selection of models we have in stock—

DOUGLAS
TRIUMPH
NORTON
P. & M.
CLYNO
MATCHLESS
HARLEY-DAVIDSON
LEVIS
ALLDAYS-ALLON
A.C.E.

and remember that we have but one aim in business—to make every customer a *satisfied* customer, whether over purchasing a new machine, for a repair job spare parts, or accessories.

That is why every Colmore customer is an enthusiast over the Motor Cycling Service we are giving.

Colmore Depot,
31, Colmore Row,
Birmingham.

Also at Liverpool, Manchester, and Leicester.

ENGLEBERT TYRES

Super-reinforced

The cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make. These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "best out of them."

ONLY 3,000 COVERS

Size.	Pattern.	Our Price.	List Price.

The Number of Motor Cycles.

STATISTICS have recently been published by the Ministry of Transport giving the number of motor cycles registered, which show the number licensed up to May 31st.

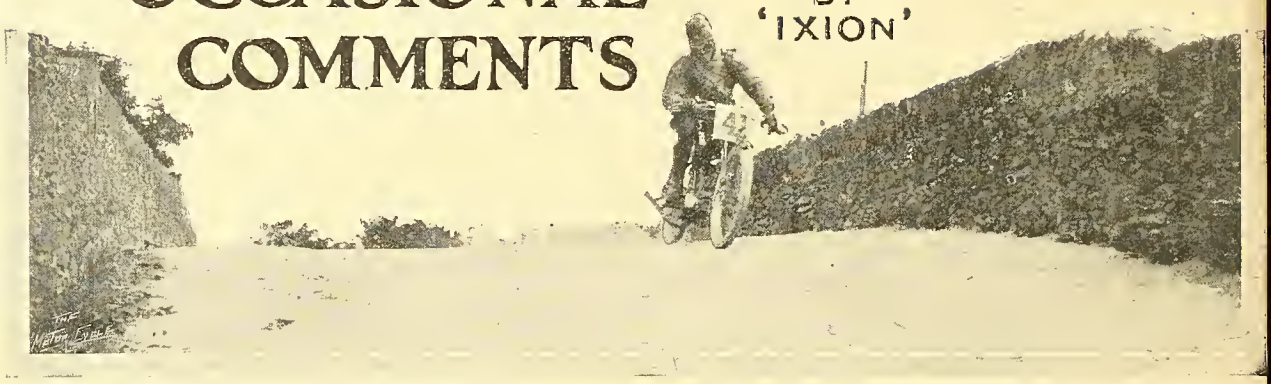
We have reason to believe that representations have been made to the Ministry from a good many quarters that the statistics should be considerably amplified in such a manner as to render them of real value to the trade and public.

The collection of statistics is, of course, an expensive matter, and it is only natural that the Ministry of Transport should desire to be satisfied that there is a real cause for their compilation before the department spends money belonging to the Road Fund, for which they are trustees on the behalf of motorists. It is possible also that the compilation of these statistics may be made a little more difficult if the Ministry accedes to the requests made by the House of Commons that broken period licences be issued instead of the existing annual, and last quarter motor cycle licences at half rates. We have strong hopes that the Ministry may be induced to meet the motor cycling public in this matter, as it is most desirable that the public be informed of the number of lightweight and mediumweight motor bicycles licensed, so that they may obtain some idea of the degree of popularity enjoyed by either type. These two grades pay differing fees, so the figure for each should be easily obtainable. Another point as to which the public would like to be informed is the exact proportion of motor bicycles to sidecar outfits and three-wheeled runabouts. Anyone living round London might be led to suppose that sidecar outfits exceed solo machines in number, but this is not so in other parts of England, and there are certain districts in which we know that the motor bicycle is more numerous than the passenger machine.

The development of the sidecar is intensely interesting. When first placed on the market few motor cyclists of that day thought it could possibly survive, but it has survived, increased, and multiplied. What we may require to know in the near future is just how its development is continuing.

The 350 c.c. Sidecar.

THE success of the 350 c.c. engine in winning this year's Senior Tourist Trophy has influenced several manufacturers seriously to consider its adoption for mediumweight sidecar work. These makers already know the capabilities of the small two-stroke as the propellant for a light sidecar, but, for some reason, very few have marketed a four-stroke-engined outfit. Now, it is argued that a type of engine which is capable of averaging 54.5 m.p.h. for over 200 miles may be regarded as suitable for average speeds of 25 to 30 m.p.h. with a sidecar. At this year's Olympia Show, therefore, several light four-stroke sidecar outfits may be staged to form a link in the range of sidecars, just as the solo mount with the same engine bridges a gap between the small lightweight and the larger 500 c.c. type of machine.



It is a well-known fact that few motor cycles are run under conditions demanding their maximum power, and that the large reserve of power available is seldom required by the average user. The modern 350 c.c. engine may be likened to the pre-war 500 c.c. power unit in many respects, and there seems no reason why either for solo or sidecar purposes, the smaller engine should not revive interest in the mediumweight machine at a moderate price. Too long have weights tended to increase, and a fast, go-anywhere 350 c.c. solo motor cycle, under 200 lb. in weight, and a sidecar outfit with 90 m.p.g. economy, cannot help but assist in enhancing the popularity of motor cycles.

It may be necessary, however, to issue a warning to motor cyclists that it is unwise to attach a sidecar to the average 2¾ h.p. motor cycle unless special precautions are taken to ensure extra frame strength, which shows that there is a danger that it may be spoiled from the solo point of view.

An index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

BY 'IXION'

"The Motor Cycle" T.T. Tip.

OUR tame tipster did not do so badly over this year's Senior race. He gave Dance, Clarence Wood, and H. R. Davies to beat the field. Dance was leading by 28s. at the half-distance, and was a certain victor, barring accidents. Clarence Wood, during practice, beat the existing official lap record; and Davies, as all the world knows, won. I hope "Michael Kirk" got on the A.J.S. at fifteens.

Secret Timing in Practice.

THERE are a variety of dodges for discovering during practice what a machine can lap in, without giving away its speed to the public. The simplest consists of marking off an easy, straightish stretch, perhaps three miles long. Call this stretch AB. On the first practice lap you time your men precisely over this distance, viz., from A to B. Robinson's time for it is, let us say, 2m. 52s. On any future test laps you time Robinson from B to A, and add on 2m. 52s.; Robinson then passes point A all out, pulls up, has a cigarette or two, and presently passes point B with a flying start. He is officially recorded as having done 54m.; but *you* know his real time was equal to, let us say, 39m. 59s.

Record Laps.

VERY few of the Manx spectators recognised that there are only three laps out of the six in the Senior race in which record time is humanly possible. On lap 1 the men are handicapped by a standing start. At the commencement of laps 3 and 5 they stop at the cages to take up petrol and oil. So the chances of record are absolutely limited to the second, fourth and sixth laps. One might really identify lap 4 as the most likely to furnish new figures; for in lap 2 most men keep a little in hand, as the survivors have not yet sorted themselves out; and in lap 6 both man and engine are growing a little weary, and should not be forced unless dire necessity compels.

The Family Sidecar.

SOME of my private correspondents have been following the example of the Rev. Mr. Quiverful in Anthony Trollope's "Barchester Towers." In other words, the number of their olive branches suggests that a second-hand motor char-à-banc would best suit them as a family motor. As they cannot afford the petrol consumption which characterises these monsters, and as the garage at "Ivydene" and similar residences is usually of the tenant's fixture lean-to order, they are compelled to make shift with a multi-seated sidecar. They seek advice on the best layouts, and particularly on weather protection—double windscreens, full length hoods, and the like. I am no sidecarist, and my family is proportioned to income tax at 6s. in the £. But perhaps some prolific reader will oblige with advice through our correspondence columns—I promise not to print his name, if he is shy. Serious tragedies are involved in some of these appeals. Take, for example, the sad case of Mr. X———, of Balham, who has six children, and has been trying to make shift with an ordinary single-seated sidecar. Little Reggie fell off the carrier on Easter Monday. Tiny Mabel suffered from croup after the last B.M.C.R.C. meet, because the screen could not be used if more than the twins rode in mummy's lap. And so on. Such pathetic appeals will surely appeal to all that is best in my readers.

Ambitious.

HENCEFORTH these columns will know me no more. I relinquished my early ambition of becoming a Senior Wrangler when my schoolmaster introduced me to surds. But I grasped enough arithmetic to see the possibilities of bookmaking as it is conducted at Brooklands. Recently, for example, I watched a bemused public accepting odds ranging from evens to fives in a field of some fifteen starters, amongst which even those who knew exactly what their own cars could do were not confident enough to back their opinions. The favourite started at evens, closely pursued in public favour by another driver at six to four, and a third at two to one. Fives was the price laid against the most hopeless outsider. I always wished to die a millionaire, and readers are requested to keep an eye open for my stance at the next B.M.C.R.C. meeting. [Note.—We have raised "Ixion's" salary, and he has agreed to stay on.—ED.]

Rival Sports.

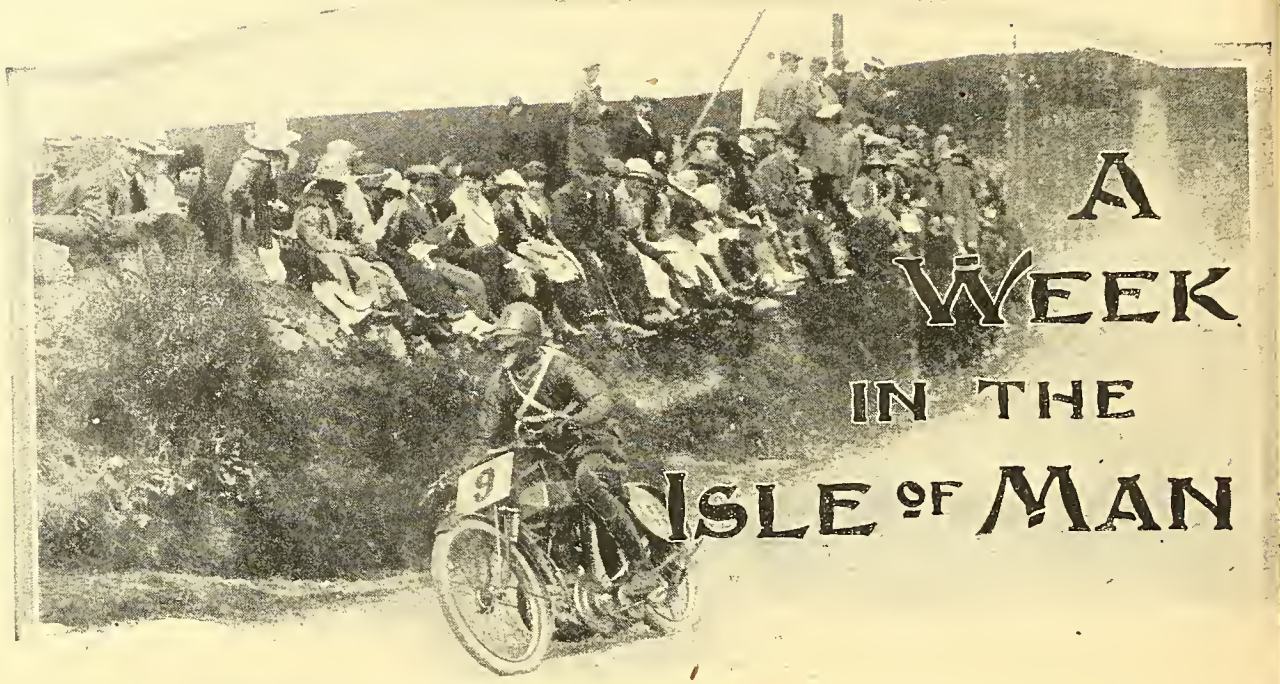
DURING a brief holiday various old friends have tried to seduce me from my allegiance to the queen of sports. Jones, for example, is a golf maniac, and he dragged me out on the links. I always understood that "links" was braw Scotch for sand dunes. In his case the term applied to a mountain covered with bracken. I began the day by spending

Occasional Comments.—

12s. (equal to three gallons of the best petrol) on four small globules of guttapercha (made—to their eternal shame—by tyre companies, of all people), and spent the rest of the day hunting for them in waist-deep wet bracken, whilst Jones dilated on the folly of "pulling one's arms in." Next day another holiday neighbour introduced me to cricket. This is a form of ceremonial exercise for which there seems to be even less excuse. A tall and muscular person, who, I understand, corresponds to what we motor cyclists call a shamateur, raised three enormous bruises on various parts of my anatomy, after which he sent my off bail so far that the game was suspended while somebody measured the distance—thought to be a record. I then sat, thinly clad, on a hard bench in an east wind whilst other persons amused themselves for three hours. After that I was placed in alarming proximity to a succession of large and ruthless men, who slammed balls at me for hours. I had to run after these balls till I ached all over. On my next vacation I will be strictly loyal to the motor cycle. I cannot think how anybody can be so foolish as to play the silly games of which I have spoken.

The Week-end.

SOME motor cyclists go to church on Sundays. Others worship under those two famous divines, Dr. Greenfields and Dr. Open Rhodes. For myself, I consider that some moral discipline befits the first day of the week, and I habitually read *The Automobile Engineer*. Not because I understand it (except about 5% of the advertisements). Not because it is interesting (its contents seem to be equally divided between trigonometry and G.A. drawings, both of which are Greek to me). But because it is an infallible preventive of swollen head. You all know that motor cycling is a most pernicious sport. When you have owned a baby two-stroke for three months, you begin to feel and talk as if Mr. Ricardo was a chicken to you in mechanical knowledge. It is here that the abstruse articles in *The Automobile Engineer* have a chastening effect. But a recent issue contained two articles of real interest to motor cyclists (I didn't write them, and I have no shares in its publishing company). One is a super-expert's diagnosis of the Cox-Atmos carburetter. Until I read it, I used to fancy that all carburetters were much of a muchness, and that if one vaporiser did you really well, it was either a gorgeous fluke, or else you'd got the right man to tune it for you. But it now looks as if the Cox-Atmos really was a super-carburetter, for we learn that the reporter man has been watching a Cox pushing mixture through a glass pipe, and, apparently, the gas was like a dry wind in a sand desert; to judge by the stuff my present carburetter spits out of its air intake, its mixture is more like a Scotch mist, with patches of thick cloud in it.



SCENES IN THE T.T. RACES.

A WEEK IN THE ISLE OF MAN

Manxland Through the Eyes of a Pressman. By B. H. Davies.

THE old spot, and the old crowd, and the old fun! A crowded boat from Liverpool, so full that the elderly lady with the canary complexion, who has never heard of Mothersill, cannot possibly reach either the saloon or the side of the boat, but must render her tribute to Neptune exactly where she has collapsed—and thank the gods, dear reader, if that spot be not your own shoulder!

Joys of the Sea Trip.

The usual pile of luggage is just forward of the stern-castle, or whatever they call it. The joy with which you wriggle out of the queue at the Liverpool landing stage is tempered by seeing your own suitcase and your fairy's cardboard hat-container laid on the deck at a point which will presently be the foundation of a heap of luggage as big as the Cunard coal dump. Then a mile outside Douglas people trample aft to regain their hand luggage—the heap is tippled over and dissected; your fairy bursts into tears when she recognises her concertina'ed hat box: her complexion begins to run: your own suitcase is—where? There is the bicycle to extract from the bowels of a noisome cavern near the bilge. There is the narrow gangway to be negotiated: steep, green slippery steps to be climbed (the tide is *always* out): the sidecar to be reattached, and last, but not least, the Manx porters to be remunerated. Then one is free to push the outfit to the nearest petrol depot, a good mile away.

Still we get there. The first night is usually brief. They have no liquor control in the Island: and one meets lots of friends. So to bed about 2 a.m. Up again about 3.30 a.m. to see the practice. Feverish work with a watch and a pencil as the men start off. Disappointing when Georgie Dance laps in 90m. 11s. You decide not to worry about timing them next morning.

During the day you go round the various camps where you will encounter much of the youngest, silliest, and sportingest manhood of Great Britain. Especially, perhaps, at the Scott camp. I don't know whether they have their mothers with them, or whether their trainer is a martinet. Anyhow, nothing is known to them by its proper name. If they offer you "bread and dripping" at 11 a.m., accept promptly: you can't tell what it will be, but it will certainly arrive in a tumbler. Similarly if a

Prolonged and clumsy replenishment of the machines might easily lose a rider the race. Here is seen the syringe used for lubricating oil, and the petrol tank and flexible pipe by means of which supplies were delivered rapidly to the Scott machines.

A Week in the Isle of Man.—

stout fellow wearing the gilt "limit gauge" should invite you to partake of "Quaker oats" at midnight, don't wither him with a glance. Appear grateful—the waiter will probably produce a magnum of 1906 Heidsieck.

By no means "Dry."

For the benefit of the uninitiated I would say that Mr. Pussyfoot Johnson has not yet turned his attention to Manxland. If your head is weak, you will be quite safe so long as the men are in training. But on race nights, when trophies are being christened and sweeps are being liquidated, only the stoutest fellows can safely venture abroad. On Senior night at least half a dozen people whom I had never met before tearfully invited me to come and stay at their homes for a month.

The Junior race? Of course, you know the modern fashion? You see the start at the grandstand. Then you get a seat in any old conveyance from the lamp bracket of a sports Sunbeam to a lady's knee in a motor coach, and go off by the back lanes to Hillberry or Ballig Bridge or Keppel Inn. Finally you return to the stand for the finish. It makes an arduous day, but you get a bit of cornerwork plus the thrill of the finish.

The sympathies of a British crowd are always with the fellow who is tackling long odds, so, though Williams and Davies are popular idols, the almost unknown Whalley was cheered to the echo in his lonely struggle against the devastating A.J.S. team, and his spectacular defeat was something of a disappointment to a sporting crowd.

H. R. Davies is the outside edge of the absolute limit, and knows the Manx course as most of us know the keyhole on our front door. At Hillberry his wheels took the same line to an inch in each lap, and his riding was such a magnificent compound of speed and restraint that a lot of people after seeing him in the Junior went off and backed him for the Senior. The baby "two-fifties" were tolerably amazing. It looks as though lightweights capable of finishing a Six Days and averaging over 40 m.p.h. in the T.T. should soon have a more recognised position as real touring mounts. The best true yarn about the Junior is that one competitor covered the whole course with his ignition fully retarded!

Golf and Horses.

Wednesday was devoted to such pursuits as the Manx Derby and golf. I do not know which party returned home the more impoverished. Ordinary golf handicaps do not count in the Isle of Man. You get one stroke for every morning you have been up at three o'clock to see the practising. A story is going the rounds about one trade magnate (I fancy it is a chestnut fathered upon him, but no matter). On the Fort Anne links there is only one bunker; it is close to a green, and consists of half an inch of sand, camouflaging a base of naked rock. Mr. Manufacturer drove his ball into the bunker, and made six ineffectual attempts to play it out. Attempt No. 7 not only extricated the ball, but actually holed it out on the adjacent green. Beery tripper looking on with profound interest is heard to remark, "Gor! Ain't he going to have some blinking job now?"

(Left) The wired-off enclosure along which all competing motor bicycles were wheeled to the weighing machine, thence to the marquee.

(Right) Weighing the Velocette on which G. Denley (on right in photograph) rode a good race in the Junior event.

A Week in the Isle of Man.—

Another good story relates to rather a greedy motorist, who took great pains to order many delicacies for lunch before marooning himself and party at the Bungalow for the Junior race. Whether our gourmand had been looking on the wine when it was red, or whether much early rising for practice had clogged his brain, I know not, but he left his false teeth on the washstand, and did not discover his omission till the party had reached the summit of the mountain.

One visitor to the Island was trying to sell his water-cooled passenger outfit to a pal. He sought out an imposing hill, and waiting till the pal was close behind (on a Ford) he engaged bottom gear, opened up to 4,000 r.p.m., and shot up the incline like a scalded rabbit. Shortly afterwards sonny in the sidecar remarked innocently, "Pappa, it's raining!" Pappa cast one incredulous glance at the brassy sky, and remarked furiously, "D— it, I've burst my radiator!" Mercifully Pappa spotted an open farmyard gate close at hand: he swung round and concealed the damaged outfit in a cowshed until such time as the pal and the Ford had passed by.

An Historic Achievement.

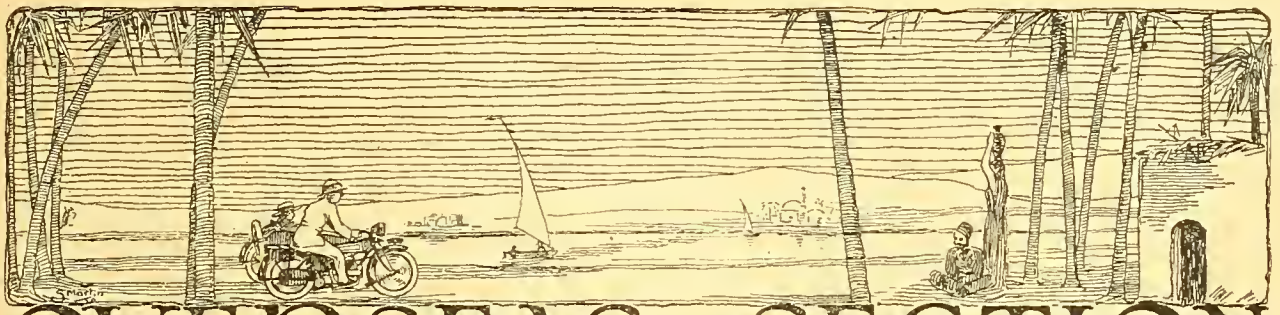
I fancy most people were disappointed with the Senior race. Of course, Davies's achievement was simply miraculous, and will be deservedly historic. But it was rather a humiliating business. The A.J.S. was the only British machine which could retain the Trophy for England. The rest were either too slow, crashed, or met trouble. The finish was nothing like as close as it ought to have been. Two or three of the crack riders performed very disappointingly, as far as lap times go—a fact which I ascribe to the loose and dangerous condition of the mountain road. Maximum speeds of 80 or 85 m.p.h. are not of much use if the road surface on the only fairly "fast" stretch does not permit of them being used.

Errors of Judgment or Design?

The running of all the British machines, barring the A.J.S., was surprisingly spasmodic. If all the crashes were due to pure errors of judgment, they do not do our men much credit, for although the speeds were terrific, the course was at the worst quite dry. If several of them are to be ascribed to brake failure or jumpy steering, so much the worse. Some of the slower men, at any rate, did all they could be expected to do. We expect great feats from our cracks: if they did not fail, their machines failed. No doubt luck was badly out in some cases. For example, a certain firm had real hopes of winning the Trophy and the team prize. It had two hot stuff merchants out to win, and a sedate sure finisher to complete the team. No. 1 crashed through a dry skid. No. 2 broke a part which had never given any trouble before. No. 3 finished according to plan. Other firms had equally aggravating experiences. It is very odd that all our machines but one should fail on the same day. The two Indians very nearly reaped the reward of a shrewd estimate: they almost hit off the speed essential to victory, and I suppose Harveyson would have been up with them, had his tyres held.

And so good-bye to the Island for another twelve months. The sea is like a millpond as I peer across Douglas Bay, and this quite reconciles me to departure. It is a terrible little Island. Every year I bring more money than I did the year before. Every year I pay my landlady by cheque, and borrow money from her to get home with. Still, it is well worth it.

T.T. WINNERS OF PAST YEARS SNAPPED ON THE ISLAND.



P. J. Evans, winner of the Junior race in 1911, on a 2¾ h.p. Humber.

T. C. de la Hay, who won the Senior race in 1920, on a 3½ h.p. Sunbeam.

Eric Williams, winner of the Junior T.T. in 1914 on an A.J.S. and also the Junior race this year on a similar mount.

F. A. Applebee, who won the Senior race in 1912, on a Scott.

In addition to the above, Jack Marshall, who won the single-cylinder class in 1908, and H. O. Wood, 1913 winner on a Scott, were also on the Island to witness this year's contest.

OVERSEAS SECTION

A Commentary based upon Practical Experience and a Study of Overseas Opinions.

To Develop the Overseas Sidecar Outfit.

It is not always an easy task for the British manufacturer of sidecar outfits to obtain accurate information as to what is really wanted by the overseas motor cyclist, and the example of Mr. J. L. Norton, the designer of the motor cycle bearing his name, who is making an extended tour of the Dominions this year, is one that might profitably be followed by others. It is still more difficult for the English maker actually to test his standard models under the most severe overseas conditions. Probably his finest opportunity of doing this is the approximation presented by the Scottish Six Days Trial, which takes place in July.

The Western Highlands of Scotland are sparsely populated, the railway system is mainly conspicuous by its limitations both in extent and service, and the roads are usually just good enough for the traffic they have to bear—perhaps a flock of sheep and two farm carts per day! For a considerable period of the trial the route runs through this district, and it is gratifying that so many makers seize the opportunity of testing their products under such conditions. Undoubtedly a desire to gain knowledge for the overseas market is at the back of the big trade entry, and the amount of good the trial will do, especially to the passenger vehicles, is simply immeasurable from the point of view of the buyer abroad.

♔ ♔ ♔

Tyre Sizes and Foot Oil Pumps.

Small section tyres have always been particularly disliked by the man who does most of his riding well away from civilisation, but at length his desire for "big, fat" tyring looks likely to be gratified. For the first time in motor cycle history 26 × 3in. (and like sized) tyres were quite generally fitted for the T.T. race; and if some of the most conservative manufacturers have come to consider that these are fast enough for such a race we may, at last, see larger section tyres on the tourist's machine. After all, now that the "slowing effect" bogey has been killed, there remains no legitimate excuse for tyres of small section on any machine, excepting perhaps the Brooklands sprint model. Surely, one very valuable lesson of the T.T.

When both hands are required for steering—be the need caused by a combination of 60 m.p.h. speeds and awkward corners, or merely 15 m.p.h. and rutted tracks—it is disconcerting, even dangerous, to attempt to operate an oil pump located in a corner of the tank. The pushing stress on the plunger, too, further tends to upset the balance of the machine. Thus a foot-operated pump is clearly desirable. But it was not until the 1921 T.T. that the great majority of our designers recognised this. Olympia, this year, will, we hope, show the fruits of this recognition. Incidentally this is an excellent example of an improvement evolved for the convenience of the speedman which will prove of the utmost benefit to the rough rider.

♔ ♔ ♔

Lessons Applicable to Overseas Requirements.

While the T.T. course includes nothing freakish, it is generally allowed that it forms a supreme test for the motor cycle over all varieties of normal road conditions, but at double the normal rider's speed requirements. For example, controllability is an exceedingly important point to the T.T. rider. It, therefore, follows that from the machine that survives with honours the gruelling and tortuous 200 miles can easily be evolved the machine most near to the ideal as an all-round utility mount—a mount incidentally that will be, automatically, almost as tractable and easily handled on the worst pioneer tracks as one that has been designed specifically for such conditions. It will also possess many other desirable qualities.

Although our average overseas reader may think that he only wants larger engines, greater clearances, and larger wheels—judging from our mail bag—probably he would benefit much more, actually, by greater reliability and efficiency in existing mediumweight mounts. This is just what the T.T. does, *e.g.*, the performance of the 202 lb. 2¾ h.p. A.J.S.

Briefly, then, the races evolve the perfect solo mount—and, indirectly, of course, the passenger machines are benefited.

♔ ♔ ♔

World-wide Importance of the T.T.

Although, no doubt, road-racing events occur more often than once a year in, say, Canada, South Africa, or Australasia, the I.O.M. meeting is in a class by itself in that it attracts the personal efforts of nearly every important motor cycle firm in business, and thus ensures that each entrant will send his men to the post with *the best* that his brains, his money, and his skill can command. No other road race in the world can claim this. Important, hardly fought and sporting as it may be, the average long distance overseas event does not, and cannot, hope

Overseas Section.—

for more than one or two makers to be strongly and directly represented, the remainder of the entry usually being made up of local agents and amateurs on a varyingly representative selection of rival makes—and even then the most suitable and "likely" mount for the course may not even be known in that particular country!

Such a representative entry from the leading manufacturers of the leading motor cycle country is exclusive to the T.T., and, therefore, it must be admitted that the race has an importance all of its own.

A Selection of Letters from Readers scattered all over the World.

Stiffen Trials!

An Aden correspondent, "COLONIAL," wishes us to head his letter as above. His views are interesting, in that they show how closely English trials are followed abroad:

"I fear this will be rather an echo of the past, but doubtless the question will crop up next year. The Land's End 18 m.p.h. regulation seemed to raise a storm of protests at the time. Surely a modern trial *must* be made stiff. It seems to me that the ideal trial, *i.e.*, the trial which is instructive in searching out weaknesses in machine and driver, is that which makes it impossible for any but the cleverest riders on the best machines to get a 'gold,' 'silvers' for the *good* riders, and *nil* for the merely average trial rider. Only in this way will the standard of machines be improved, and, what is perhaps more important, the driver's art of getting the best from a machine, wherein lies the whole sport of the motor cycle. Cheapening gold medals will inevitably make everyone lose interest in trials, except the objectionable namby-pamby type of pot-hunter, and surely we do not want him encouraged!"

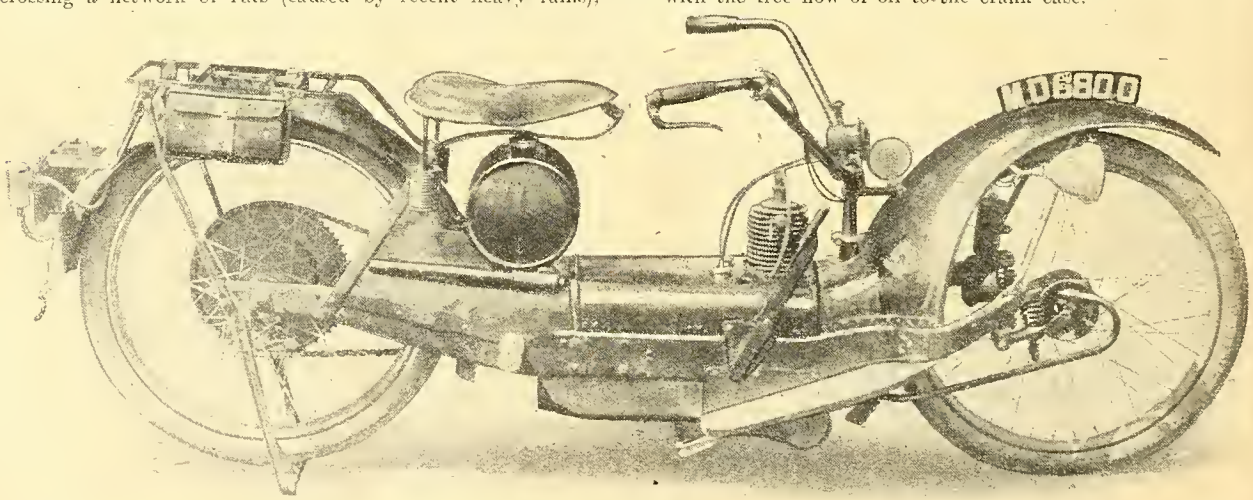
Hard Going in Nigeria.

A Nigerian correspondent, signing himself "A WELL-WISHER," states that 22 m.p.h. is an appalling speed on some of the "roads" out there. Therefore very fast machines are not wanted. He writes: "I was very much interested, and amused, with 'Winter in the Highlands' in your excellent journal of March 3rd and 10th. The writer should ride over some of the roads out here: he would not then write about never letting the machine travel at less than 25 m.p.h.

"I, too, have a P. and M. and sidecar, and find it an excellent machine, my only complaint being the smallness of the tyres.

"One of the journeys I have to make constantly is twelve miles over a road which begins with an up-hill hairpin bend of about twenty degrees; there are a lot of such sharp turns that you seem to be coming back to your starting place; and the surface consists largely of loose red latrite, which cuts up the tyres at an awful rate.

"My wife and I took that journey recently. We got on a bit of straight road, with, comparatively, only a moderately bad surface, so I worked up a speed of 22 m.p.h., but even at that slow speed we did not enjoy the jolts we got when crossing a network of ruts (caused by recent heavy rains), averaging about a foot wide and four or five inches deep. That it did not break is an excellent testimonial for the machine.



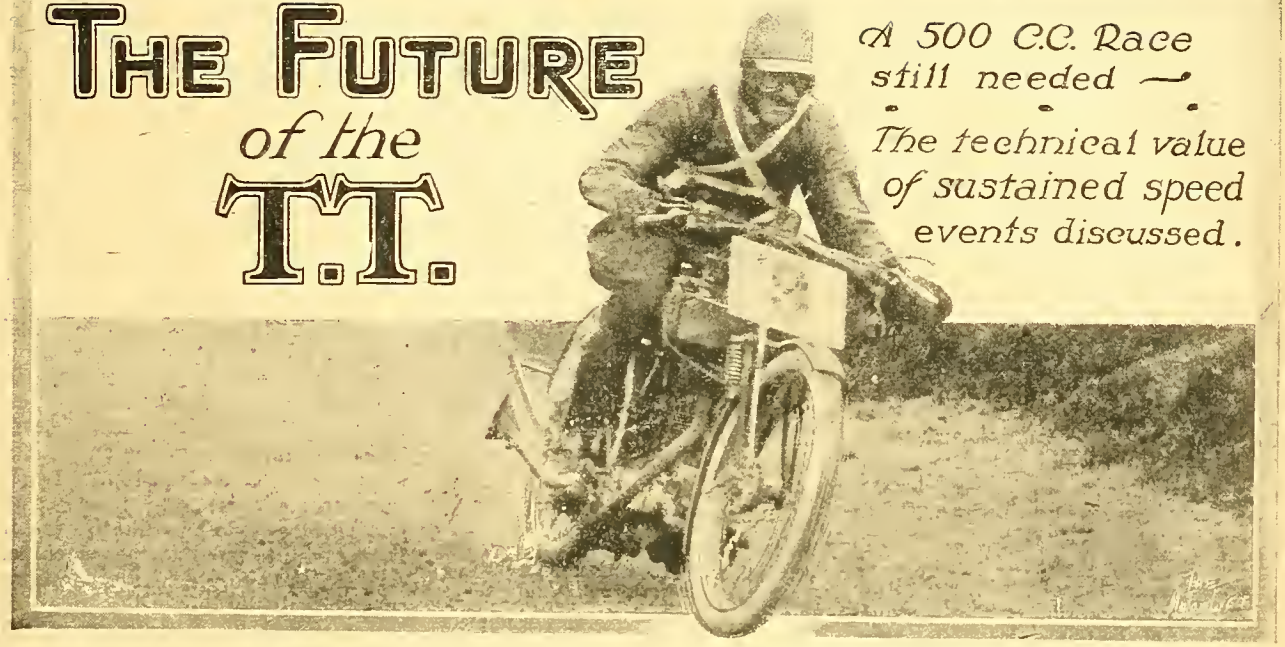
"Some of those who grumble so much about the condition of the English roads should come out here for a bit."

Popular Makes in Switzerland.

That England is not at all well represented in Switzerland is the opinion of MR. A. W. J. MURSELL (Geneva): "Your correspondent 'Surev' comments on the lack of British motor cycles in the canton of Geneva. This is only due to the fact that Geneva is the centre of the motor cycle industry of Switzerland, and for the past years people have been patronising local makers and buying such locally manufactured machines as the Motosacoche and the Moto-Rêve. But it is noticeable now how foreign machines are quickly becoming popular. France is rapidly becoming a rival to Great Britain, owing to the extremely high rate of exchange. The Blériot motor cycles are being imported into Switzerland now, and are selling at the low price of 2,500 francs. On the other hand, England is very badly represented here, the only agency here being for the Hobart motor cycles. Lastly, I may add that the most suitable machine for solo tourist work in Switzerland is a lightweight of $2\frac{3}{4}$ h.p."

Spares in India.

We make no excuse for publishing one letter on the eternal subject of spares. It is typical of many, and is chosen mainly because it is terse! MR. E. P. FAWCETT, of Lakhimpur, U.P., India, writes: "When will British motor cycle manufacturers learn that if they wish to compete with the Americans, they must give better service? In February, 1920, I had the misfortune to break the valve glass of the Best and Lloyd sight feed lubricator on my B.S.A. The district local agent promised to get me one, but by November had to confess his inability to supply me. I tried various shops, including those of the local agents, in Calcutta, Lucknow, and Delhi, unsuccessfully. I finally wrote home for one, and was informed of despatch in March, but am still awaiting the parcel. I succeeded in piecing together the fragments after a fashion, but an air-tight fit was impossible, consequently back pressure interferes seriously with the free flow of oil to the crank case."



The manufacturers of this unconventional motor cycle chose the T.T. week and the Isle of Man as fitting time and place for its *debut* to the public. It is known as the "Ner-a-car wheeler," and it created quite a sensation on Douglas promenade. The engine is a two-stroke of 211 c.c. capacity, and five speeds are provided by a friction transmission set. Ladies and elderly people particularly were interested.

THE FUTURE of the T.T.

A 500 C.C. Race still needed —

The technical value of sustained speed events discussed.

Will the cylinder capacity limit of the Senior T.T. machines be reduced for future races? Before the races in the Isle of Man, opinion was almost unanimous that the 500 c.c. type had been so developed that it would prove too fast for the course. Further, it was thought that the annual Tourist Trophy event had served its purpose so far as concerns this size of engine. Opinion is still divided, and many lean to the view that most post bellum designs have not had sufficient time to be fully developed, and should be given another year to regain prestige lost in their defeat by a machine of 350 c.c. capacity, and by two motor cycles of Transatlantic origin. In this article the writer discusses the position as he sees it.

LIKE many other enthusiasts I went to the Island this year prepared to take a tearful farewell of the Senior event. Last year's race was a hastily organised affair, held too soon after the war. Most of the 500 c.c. specialists abstained, and the 1921 race was rightly regarded as the first genuine post-war T.T. We knew that the 3½ h.p. Norton had bettered 90 m.p.h. at Brooklands, and that several firms had spent enormous sums with an eye to victory in the Island. Many people had ominous forebodings about the race. The 3½ h.p. was already over-developed for the course. A dozen men were to start the last lap within seconds of each other, and fight out a painfully desperate finish. The course was to be littered with wreckage, produced by the perils of a tight race on super-speedy machines. Next year 350 c.c. was to be the highest imaginable capacity for the Senior race, and the 250 c.c. "egg-cups" were to have the Junior all to themselves.

These pretty fancies have all foundered on the rock of reality. It is idle to pretend that the 500 c.c. type cannot be further improved by more T.T. races. All our crack 500 c.c. machines have been soundly thrashed by the little A.J.S. and by a couple of Indians; the latter is an improvisation, a bisected twin, rather than a deliberately designed ideal. The British 3½ h.p. can hardly take this beating lying down. It is an arguable proposition that the tourist 500 c.c. is now more than adequate for all road needs and proof against all road tests. Students may plausibly assert that asking a roadster machine to average 55 m.p.h. over the Manx course is comparable to designing a twin perambulator for the Arctic circle. But these arguments apply with equal force to the Junior T.T.

My personal view is that we can drop the Senior event (or cut its capacity limit down to 350 c.c.) when two conditions are fulfilled, viz.:

(1) When most 3½ h.p. machines can do six laps in an average of 43 mins. without trouble.

(2) When victory becomes a mere matter of taking the most risks, the necessary speed and reliability being taken for granted by all the leading entrants.

Examine these conditions for a moment. In this year's race there were certain machines which were discovered to have badly designed cylinders. Their riders found in practice that disastrous distortion occurred above a certain speed. The riding orders given to these men at the post were to lap at 45m. average for the team prize. Even this very modest ambition was unfulfilled. In 1922 the engines made by this firm will show much more stamina when climbing with a sidecar, and that stamina will be the direct result of 1921 T.T. experience.

Take another team. The technical staff were allotted £10,000 in 1919 wherewith to win the 1921 T.T. outright. They did not win, though they overspent their allotted capital. Have we nothing more to learn about the 500 c.c. engine when two years and £10,000 end in failure?

Take another team. Despite ample Brooklands experience, all their machines suffered from valve trouble. It was not the most serious type of valve trouble, but it ruined hopes which would otherwise have been fulfilled. Is the average valve perfect? Are not further valve tests, under the peculiarly searching conditions of the T.T., worth a little outlay?

The Future of the T.T.

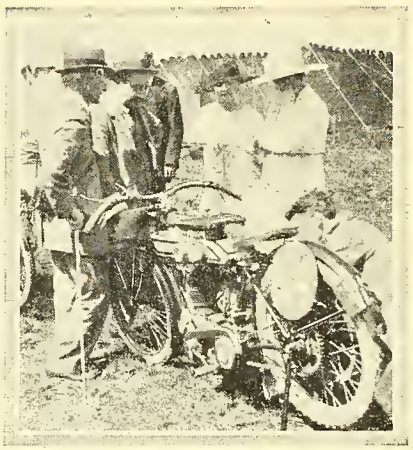
Again, the trouble encountered with pistons in practice, if not in the race, would provide materials for a regular treatise; and many of the entrants have learnt much. Tyre makers, plug makers, chain makers—all have come home with new knowledge to assimilate. If another 500 c.c. race is held next year, there will be similar gains in knowledge. *If the capacity is cut down to 350 c.c., we sidetrack the 3½ h.p. off the line of development;* the 3½ h.p. is still the typical British—'bus—we cannot afford to sidetrack it. There are two main arguments against the survival of the Senior in its present form. One is its cost. Of course, a firm which has laid out a vast sum without reaping any advertisement will be inclined to grumble. But experience always has to be paid for, and is always worth paying for. Moreover, a lot of the expenditure has been foolish. The proper method of tackling the T.T. is to begin at least a year in advance, and to run the experimental *machine (not* the engine only) to destruction at high speed. What is Brooklands for? Yet some of the entrants limited their preliminary tests to

(1.) Bench tests of the engine at constant speeds (so different from the wild variations of stress in a road race).

(2.) Road tests of the machine as a whole (at speeds far below the Manx average).

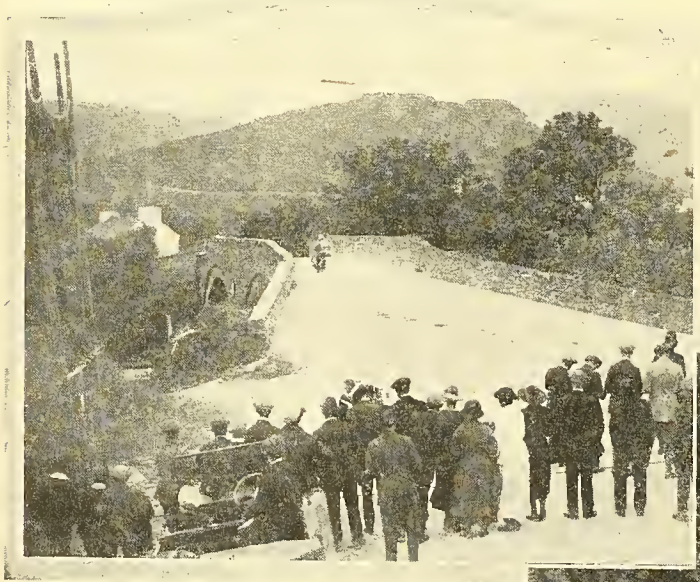
The exact opposite is wanted, viz.:

(1.) "Jerk" tests of the engine from 0 to 4,000 r.p.m.



(2.) High speed tests of the machine as a whole.

The second objection to the "Senior" is more subtle. Many of the T.T. riders still say that victory goes to the man, rather than the machine. In other words, they think that Davies would have won on any mount which gave him a clean run. If that were true, it is more to a firm's interest to engage men like Davies or Dance than to build a super-machine. As soon as victory depends wholly or even principally upon the rider, it will certainly be time to revise the conditions. Meanwhile let us notice that:



(a) In 1920 Davies rode in both races, and failed to finish in either, being let down by a machine which had not then "found itself."

(b) If we could mount Davies, Dance, Dixon, Le Vack, Edmond, Shemans, Bennett, de la Hay, Hassall, C. P. Wood, and D. M. Brown on eleven similar machines—all A.J.S., Indian, Sunbeam, or anything you like—who would win?

Nobody dare bet heavily on such a race. There is very little difference between the leading men. The A.J.S. won partly because it was just about the best tested

More than one eminent motor cycle representative came from the Continent to see the T.T. races. Here is M. Paul Kelecom, associated with the F.N. factory at Liege, and Mr. A. V. Ebblewhite, who acted as time auditor during the races, watching N. H. Hadfield making adjustments on his Norton.

(Left) At this spot—Sulby Bridge—G. W. Jones (New Hudson) was precipitated over the parapet into the bramble bushes. He continued to race, however, though it was against the doctor's orders, and gained the Nisbet award for the most plucky performance during the two T.T. races.

(Right) D. S. Alexander (Norton) commencing the mountain climb after rounding Ramsey hairpin corner (observable in the distance).

The Future of the T.T.

machine in the race, partly because its rider is brilliant, and made none of the tiny miscalculations to which the best men are liable. Of his ten chief rivals, as before-named, two were on slower mounts, five had mechanical troubles, one was physically unequal to six laps at the date of the race, and the other two "crashed," *i.e.*, at least seven out of the ten were beaten by the machines they rode. I am the last man to underestimate the human factor, but even in the 500 c.c. class the machine still counts as much as the rider—aye, and more. We can all name machines on which even Davies could never have won.

I suggest then, that the functions of the T.T., with reference to the 3½ h.p. machine, are by no means exhausted. I hope the race will be repeated in 1922. In that case, the A.J.S. will not win, nor will any 2¾ h.p. machine, however brilliantly it may be handled. The two fastest laps this year were both put up by 3½ h.p. machines, one ridden by a man suffering from concussion, and the other by a man who is well past his first youth. By June, 1922, some machines which were "green" this summer can be ripened.

One great merit of transferring the 350 c.c. machines to the Senior would be the unveiling of the real lightweights. At present they are completely overshadowed by the 2¾ h.p. Prentice won his race comfortably: but he finished tenth in the combined event, and as he was more than half an hour behind the fastest 350 c.c., his victory was not recognised by the crowd. The firms which make full use of the Six Days and the T.T. are rapidly perfecting their 250 c.c. models. Ere long they will certainly have a race all to themselves. By that time their more dubious rivals may die a natural death: and the public, attracted by the T.T. performances of the better class babies, will be more likely to pick a sound machine.

It is quite certain that the T.T. must be kept clear of the car races in 1922, and preferably it should precede them. The two cannot be held in the same week—how can cars and cycles practise together, and what sort of surface will the cars leave on the roads? The T.T. must therefore come very early or very late in the season—early, for choice, as the roads will be better in spring than in autumn. In that case, it is not too early to commence trying out 'buses for the 1922 race: and the 500 mile race at Brooklands provides a splendid opportunity at low cost. *Amour propre* need not hinder a manufacturer from using this race as a test, rather than an advertisement. I know one maker who always enters a private owner in trials if he wants to test anything he cannot quite trust: if the 'bus fails, it is, "Oh, there was a duffer amateur up!" If it succeeds, the credit is doubled. Anyhow, 500 miles of full throttle will unearth new weaknesses in some of the Manx machines and test the modifications inspired by the T.T. in others. In both cases such information is worth as much to a firm as Capt. Miller's gold cup.

ROAD RIDER.

E. R. Jacobs cornering easily on his Coulson.

RIDING ATTITUDES OF T.T. COMPETITORS.

W. Howarth appears to be quite at home on his Dot.

A. Edwards, who rode well on his little Levis.

THE ROADS AND MOTOR CYCLES.

EVENTUALLY, perhaps, the roads of this country will be so constructed that their surface will be uniformly good. Most drastic alterations in the method of construction are necessary to avoid the expensive repairs which have to be undertaken at the present time. The light forms of motor vehicles, especially motor cycles, suffer most, and are subject to taxes quite out of proportion to those of heavy transport vehicles which destroy present-day roads within a few months of their completion. In the meantime spring frames, or, at least, some form of saddle suspension that damps out road vibration, have become almost a necessity.

Bad roads have also brought into popularity larger tyres, and in this connection there is a tendency for riders to inflate at lower pressures than those for which the tyres have been designed. Hence it behoves those who use "oversize" tyres to ascertain whether the walls of their tyres are sufficiently strong to withstand the strains to which they are subjected.

HILL-CLIMBING IN IRELAND.

A competitor on a Douglas going well in a hill-climbing contest recently held by the Dublin M.C.C. at Tallaght, Co. Dublin.

Hampstead Amateur M.C.C.

On July 16th this club is holding an open hill-climb, solely for amateurs, on machines with standard engines. Entries (3s. 6d. fee) should be sent to Mr. Henry Brent, 38, Frognal, London, N.W.3.

Sheffield and Hallamshire M.C.C.

Following are the results of the hill-climb held at Grange Hill, Cuthorpe, near Chesterfield :

560 c.c. SOLO.—H. Taylor (3½ Sunbeam).
350 c.c. SOLO.—J. Jenkins (2¼ Velocette).
UNLIMITED SOLO.—H. Taylor (3½ Sunbeam).
560 c.c. SIDECARS.—C. Turner (4¼ B.S.A. sc.).
UNLIMITED SIDECARS.—L. Adams 7-9 Indian sc.).

H. Taylor (3½ Sunbeam) made fastest time of the day.

Stamford and Peterborough M.C.C.

About forty members entered for the recent hill-climb, with the following results :

275 c.c. SOLO (STANDING START).
Stamford Club.—1, G. Brown (2¼ Massey-Arran), 28⅘s.; 2, C. Belton (2¼ Levis), 35s.
Peterborough Club.—1, M. Mason (2¼ Levis), 32⅘s.; 2, A. North (2¼ Connaught), 32⅘s.

350 c.c. SOLO CLASS (STANDING START).
Stamford Club.—1, G Brown (2¼ Massey-Arran), 27⅘s.; 2, L. Moulds (2¾ Douglas), 30⅘s.
Peterborough Club.—1, M. Mason (2¼ Levis), 32⅘s.; 2, B. Ladds (2¾ Douglas), 36s.

600 c.c. SOLO (STANDING START).
Stamford Club.—1, G. Freer (3¾ Scott), 26⅘s.; 2, G. Brown (2¼ Massey-Arran), 27⅘s.; 3, S. Symons (3¼ Bradbury), 30s.
Peterborough Club.—D. Stapleton (3½ Sunbeam), 21s.; 2, E. Gaunt (4 Triumph), 23⅘s.; 3, F Paten (4 Triumph), 24⅘s.

UNLIMITED SOLO FLYING START.
Stamford Club.—1, G. Freer (3¾ Scott), 17⅘s.; 2, G. Brown (2¼ Massey-Arran), 18s.; 3, S. Symons (3½ Bradbury), 21s.
Peterborough Club.—1, M. Stapleton (3½ Sunbeam), 15⅘s.; 2, S. Gaunt (4 Triumph), 16⅘s.; K. Vickers (3 A.B.C.), 16⅘s.; 3, H. Paten (4 Triumph), 16⅘s.
Passenger Class (Flying Start).—1, M. Burrows (8 Enfield), 22⅘s.; 2, J. Dunn (12 Morgan), 23⅘s.
Standing Start.—J. Dunn (12 Morgan), 30⅘s.; 2, W. Burrows (8 Enfield), 32⅘s.

Harrogate and District M.C.C.

Results have now been announced of the trial for the Muratti Trophy held on the 19th inst., and are as follows :

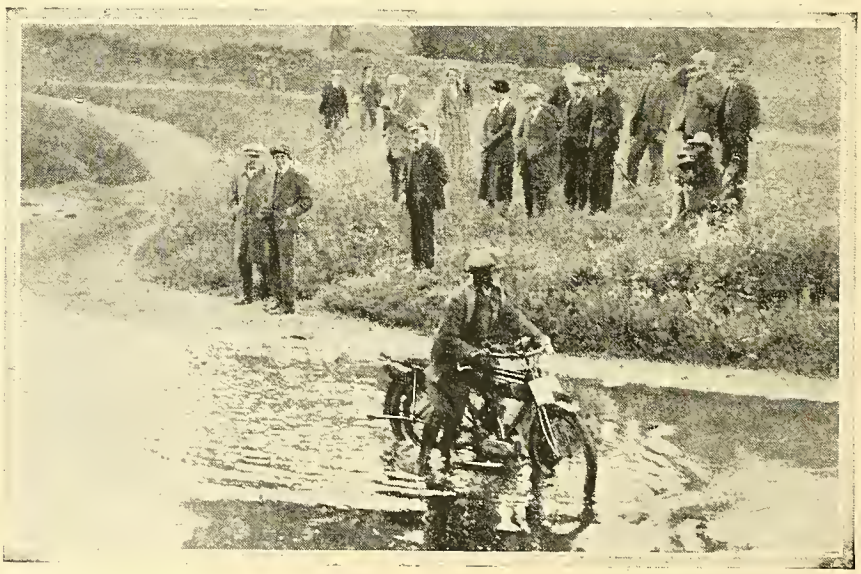
WINNER OF TROPHY AND GOLD MEDAL.—T. W. Monkhouse, age 63 years (4 Triumph sc.), who lost no marks on time.

WINNERS OF MIDWOOD CUP AND GOLD MEDALS.—G. Hill (3¾ Scott) and D. Berry (4 Triumph), tied.

BRONZE MEDALS.—W. Wells (3½ Sunbeam) and H. Acklam (6 B.S.A. sc.).

SPECIAL PRIZES.—H. Acklam (6 B.S.A. sc.), L. Bonser (2¼ Allon), A. Baines (2½ Sun), R. Hill (2¼ Velocette), and G. Wray (4 Triumph).

Wellingborough and Rushden District M.C.C.



There was a large attendance at the hill-climb at Hardwater Crossing, which was held under ideal weather conditions.

Norton riders carried most of the "firsts," but A. J. Bosworth (3½ Brough) made a good second fastest time.

500 c.c. CLASS.—1, Spencer Robb (3½ Norton); 2, Rex Ludlow (3½ Norton).

750 c.c. CLASS.—1, Spencer Robb (3½ Norton); 2, A. J. Bosworth (3½ Brough).

Fastest Time of Day.—S. Robb (3½ Norton), 25s.

H. Ackland, jun. (Blackburne), comes to grief in the watersplash at Knox during the Harrogate and District M.C.C. trial for the Muratti Trophy.

Club News.—

Kelso and District M.C.C.

An open hill-climb will be held at the well-known Lawton Hill, near Jedburgh, on July 23rd.

Coventry and Warwickshire M.C. and Nuneaton and District M.C.C.

On Sunday, the 19th inst., these clubs held a joint church parade at Stockingford Church, the Rev. J. M. Philpott (an A.C.U. consul) conducting the service.

Berwick and District M.C.

A consistency hill-climb held on the 19th inst. resulted as follows :

SOLO CLASS.—W. Murray (3½ Sports Sunbeam), error 5th s.

SIDECAR CLASS.—H. E. Blackney (4 Triumph s.c.) error 5th s.

Fastest time of the day.—John W. Lee, Jun. (3½ Sports Sunbeam).

Maesteg and District M.C.

Held on a fairly difficult fifty-mile course, the recent reliability trial attracted fifteen entries. Results :

GOLD MEDALS.—W. Ivor Thomas (3½ Sunbeam) and J. J. Boyd-Harvey (3½ Scott-Squirrel).

SILVER MEDALS.—J. J. Salter (3½ Bradbury); H. Smith (7-9 Harley Davidson s.c.); W. Aston (3½ Scott-Squirrel).

Kidderminster M.C.C.

Appended are results of the recent flexibility hill-climb, the times being the differences between fast and slow ascents. No clutch slipping was allowed in the slow climb.

1, F. Adam (3½ Norton), 1m. 31s.; 2, H. Morris (2¾ Diamond), 57⅗s.; 3, G. Adam (2¾ Verus-Blackburne), 52⅗s.

Leinster M.C.C.

On the 18th inst. the above club held a handicap hill-climbing competition, which was very well supported. Results :

	Handicap Time.
250 c.c.	
1. Major Waters (2¼ Diamond), scr.	44s.
2. P. Doyle (2¾ Enfield), 7s. ...	47⅗s.
3. G. Callaghan (2¼ Leivs), 8s. ...	50s.
350 c.c.	
1. H. B. Evans (2⅝ Douglas), 7s.	44s.
2. W. Gilmour (2⅝ Douglas), 7s. ...	45⅗s.
3. G. Callaghan (2¼ R. Ruby), 10s.	52⅗s.
550 c.c.	
1. G. McGlade (4 Triumph), scr. ...	43⅗s.
2. D. McCrea (3½ Rudge), 2s. ...	44⅗s.
3. S. McNeill (4 Triumph), scr. ...	49⅗s.
UNLIMITED.	
1. H. L. Phillips (7-9 Harley), 2s. ...	34s.
2. W. Knowles (7-9 Indian), 2s. ...	36s.
3. A. Summerville (7-9 Indian), 2s.	37⅗s.
SIDECARS.	
1. W. L. Holding (6 Enfield sc.), 8s.	43s.
2. R. Phillips (7-9 Harley sc.), 4s. ...	43⅗s.
3. W. Burney (8 Enfield sc.), 6s. ...	48⅗s.

South Midland Centre A.C.U.

At a meeting of this newly-formed centre, it was decided to hold a centre trial on Saturday, July 16th. A brake test, a hairpin corner, and a colonial section will be included in the route, to be made up of two seventy-mile non-stop sections. Mr. Frank Thomas (of 172, Belsize Road, South Hampstead, London, N.W.) is the trial honorary secretary.

Week-end Club Events.

July 2.—Herts County A. and Ac. C. Meet at Willow Grange.
July 2.—Sutton Coldfield and North Birmingham A.C. Hill-climb at Penkridge Hill.
July 2.—Kidderminster, Stourbridge, and Wolverhampton M.C. Clubs. Inter-club Hill-climb.
July 2. North-West London M.C.C. Speed Trials.
July 2.—Edinburgh and District M.C. "John Bull" Trophy Trial.
July 2.—Yorkshire Centre A.C.U. Team Trials.
July 2.—Middlesbrough and District M.C. Hill-climb.
July 2.—Exeter M.C. and L.C.C. Club Trial over Dartmoor.
July 2.—North Lindsey A.C. Speed Trials in Holme Lane.
July 2.—Coventry Triangle M.C. Hill-climb.
July 2.—Wolverhampton M.C.C. Inter-club Trial.
July 2.—Coventry and Warwickshire M.C. Reliability Trial.
July 2.—Saltcoats and District M.C.C. Reliability Trial.
July 2. West Birmingham M.C.C. Hill-climb.
July 2.—Dewsbury and District M.C.C. Freak Hill-climb.
July 2-3.—Northern M.C. Anderson Cup Trial in the Lake District.
July 3.—East Midland Centre A.C.U. Championship Trial for Raleigh Cup.
July 3.—Central London M.C.C. Club Run to Maidenhead Thicket.
July 3.—Stafford and District M.C.C. Club Run to Llangollen.
July 3. Halifax and District M.C.C. Club Run to Malker.
July 3.—Wakefield M.C.C. and Leeds M.C. Inter-club Run.
July 3.—Bishop Auckland and District M.C. Reliability Trial.
July 3. Harrogate and District M.C.C. President's Trophy Trial.
July 3.—Eastbourne and District M.C.C. Club Run to Little Common.
July 3.—Essex M.C. Club Run.
July 3.—Basingstoke and District M.C. and L.C.C. Club Run to Highcliffe.
July 3.—Woolwich, Plumstead, and District M.C. Picnic at Bailey's Hill.
July 3.—Newcastle and District M.C. Chase Cup Trial.
July 6.—Surbiton and District M.C.C. Butler Cup Trial.
July 6.—Scarborough and District M.C. Whitby Section Reliability Trial.
July 7.—Taunton and District M.C.C. and L.C.C. 100 Miles Reliability Trial.

West Birmingham M.C.C.

Only one competitor succeeded in reaching the summit of the hill during the recent "old crock" hill-climb. He was R. G. Smith, while J. F. Mundy was second.

Rugby and District M.C.C.

Results, obtained on a handicap basis, of the hill-climb held on the 19th inst. at Whilton are as follows :

1, A. Oxenbury (2¾ Douglas); 2, G. B. Bradley (6 Ariel); 3, A. W. Webb (3½ Triumph).

Fastest time of the day : G. B. Bradley (6 Ariel), 25⅗s.

Hull A.C. and L.C.C. and Hull M.C.C.

Results of the joint twelve-hour reliability trial for the "Dick Ellis" Memorial Trophy have been announced :

1, W. K. Lythe (4 Douglas); 2, W. Padgett (3½ Sunbeam); 3, M. Crawford, Jun. (2½ Sun Vitesse); 4, T. Beanlands (7-9 Harley sc.), special sidecar prize; 5, M. Simpson (6 Enfield sc.), sealed prize.

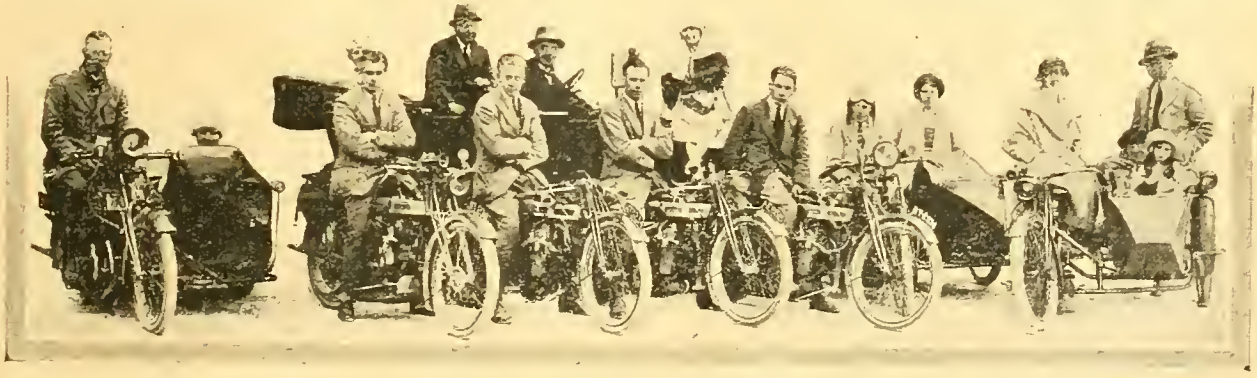
Birmingham M.C.C.

Full results of the Llangollen Trial, referred to last week, are now available, and are as follows :

SILVER SOUVENIRS.—Mrs. F. W. Giles (2¾ A.J.S.); F. W. Giles (7 A.J.S. sc.); T. Stevens (7 James sc.); E. J. Neal (2½ Metro-Tyler); L. H. Perry (10 Morgan).

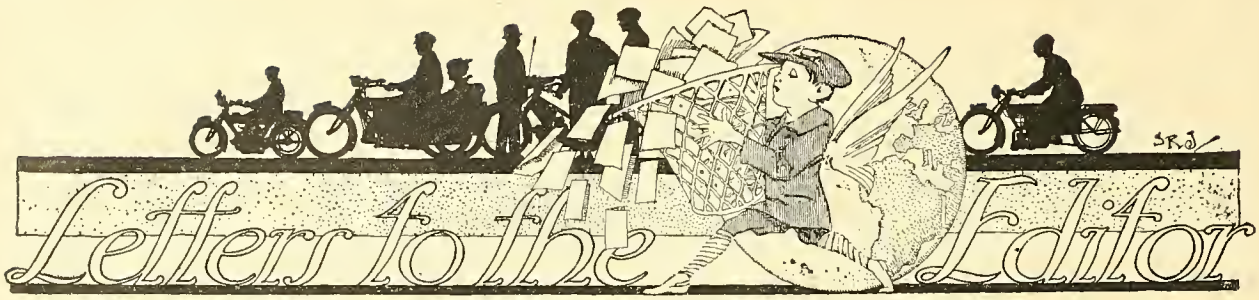
SPECIAL NOVICES PRIZE.—A. W. Newman (4 Coulson B).

SILVER MEDALS.—G. R. Morgan (4 Triumph sc.); F. J. Wilkins (2¼ New Imperial); Mrs. R. W. Duke (2¼ Velocette); R. W. Duke (4 Triumph); A. W. Thrush (3½ Sunbeam); S. Hall (3½ Sunbeam); T. F. Watson (4 Norton sc.); F. H. Featherstone (3½ Humber); S. H. Rhodes (4 Wolf-Blackburne sc.); H. P. Cutler (4 Norton sc.); H. A. Harris (2½ Sirrah); R. A. Fawssett (4¼ B.S.A.); H. C. Jennens (3½ James); F. T. Hill (5-6 James sc.); E. J. Bastock (2½ Levis); A. H. Stubbs (4¼ B.S.A.); F. H. Brown (8 Rex sc.); W. A. Bown (2½ Bown); B. Bladder (8 New Imperial sc.); A. T. Cooper (8 Matchless sc.); T. H. Weaver (2¾ Verus sc.); and J. G. Orford (2¼ British Standard).



Surrey M.C.C.

The annual trial to Exeter for the Triumph Cup took place on the 17th and 18th this month. On the outward journey Peak Hill was observed, and Lionel Mitchell (3½ Rudge) and Capt. Peaty (Hawker) made fast ascents. The two Baby Triumphs, ridden by C. J. Feeny and M. Dickenson, climbed well. There were no failures on Trow Hill on the second day. Results have now been announced as follows :



TRIUMPH CUP.—Lionel Mitchell (3½ Rudge), who thus wins the trophy outright.

CHAIRMAN'S CUP.—M. Relph (Coventry Premier).

Mr. Philip G. Robinson, "Evenley," Carshalton Road, Sutton, Surrey, has just been appointed secretary of the London section of this club.

Members of the "live" Bristol M.C.C. prior to recent club run to Nailsworth. Five of the riders are Douglas owners, while the one on the extreme left drives a Sunbeam sidecar.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

ACCESSORIES THAT WON—AND LOST—THE T.T.!

Sir,—I notice in the columns of your valuable paper, after races and trials, different manufacturers advertise their products (such as engine, carburetter, magneto, saddle, belt or chain, tyres, and even oil and petrol) as being part of the winning machine, each manufacturer taking credit for his own product as being instrumental in winning the race.

Now, it would be interesting to know what firm is going to take credit for the tyres which "let down" some machines that might otherwise have won the T.T. had it not been for these defects.

I think this information would be of quite as much value to the motor cyclist as the name of the tyres which were fitted to the winning machine. ENFIELD.

Londonderry.

Sir,—Whose chewing gum won the T.T.? X.Y.Z.

London.

EAST END CHILDREN'S OUTING.

Sir,—Young East London sends its greeting to readers of *The Motor Cycle*, and wishes to record that, by the courtesy of some of its readers, it has had the treat of its life!

A whole day in the country is a big enough joy anyway, when you live five or six in a room, in stuffy little houses down drab grey streets and airless alleys. But a day in the country, when a fleet of motor cars and motor cycles with sidecars comes to fetch you all the way from Bow to Harpenden and returns you at the end of eleven hours crammed full of joys, is something to remember all your life.

As we packed ourselves into these wonderful little cars, we felt like veritable kings and queens, and we cannot say a big enough "Thank you" to the "prop'ly motor men" who spared a precious Saturday to give us such a day of wonderful surprises.

9.30, Saturday morning, June 4th, saw us packing in—fifty of us, from five to eight years old, with ten older people to keep us company. 8.30, Saturday evening, saw us tumbling out, laden with flowers and chocolates, our mothers, fathers, and big brothers and sisters all lined up to welcome us home and hear the tale of our wonderful adventures.

V. D. LESTER, } On behalf of the boys and girls
A. M. PULLER, } of Kingsley Hall, Bow, E.

RIDER OR MACHINE?

Sir,—May I put the following conclusion of mine to others of your correspondents, and thereby ascertain the general opinion on this absorbing event?

Surely in the light of this year's results one must not place too much admiration on the motor cycle concerned (the 2¾ h.p. A.J.S.), considering that this machine has won the Junior race three years in succession, but always in the hands of one of the "crack" Williams'? This points to the event now resolving itself into a tussle between driver and driver, as surely nobody will hold himself up to ridicule by arguing that the 2¾ h.p. A.J.S. is actually so much faster, or more reliable, than a Norton, Sunbeam, Indian, or Triumph. No, obviously the firms entered in the Senior race, and not represented in the first three home, must look around for the services of more expert riders, such as Davies, Eric Williams, and others, rather than contemplate new designs for their already excellent and speedy engines.

Mr. H. R. Davies deserves all credit for his masterful performance, and should he be riding for another firm next year, I think, given, as in this year, physical endurance and an absence of tyre trouble, that firm will see its machine piloted to victory.

The opinions of the various manufacturers concerned would be interesting and enlightening. T.T. ASPIRANT.

Dunmow.

MARKETING THE T.T. MACHINES.

Sir,—Your leading article entitled "Speed and the Tourist Trophy" should definitely settle the question as to the advantages gained to the motor cycle world by this yearly event.

The wonderful performances of the winning machines have only been attained by competing on this course, and bear out your views. The public will eventually benefit provided a similar machine is put on the market.

Possibly the following argument will not be shared by all, but we contend that, in future, there should be a clause inserted in the conditions that no machine can be entered unless the price is stated, and that the machine is available to the buying public—in other words, "The same as you can buy."

This would have the effect of lessening the time when such things as a perfect overhead valve 2¾ h.p. 350 c.c. engine, and the like, would be in the motor cyclist's hands.

As it now stands the engine and other parts of a motor cycle are little further removed from the designs prevailing before the war.

In conclusion, we would suggest that if such firms as A. J. Stevens, Sunbeam, and Triumph would market such a machine they could be assured of a ready sale as we feel that a three or four-speed 2¾ h.p. is all that is required by the sporting solo rider.

A. FLETCHER.
S. C. METZGAR.
J. F. PARKER.
F. SHAPLAND.

CLUB SECRETARIES, NOTE!

Sir,—As a constant reader of *The Motor Cycle*, I think some other readers might like to hear of a very suitable hill for speed trials. This is Britwell Hill, near Watlington, Oxfordshire. There is practically no traffic, and it has a good straight start, and, I should think, about half a mile of straight wide climb. The surface is better than Kop, and there is a good straight finish.

PAUL HECTOR JOHNSON.

CARBURETTING A CATERPILLAR—NEARLY!

Sir,—A short time after starting out the other day, I came to a sudden stop, with that peculiar feeling which betokens petrol shortage.

On examining the gauze filter in the carburetter, I found a small green caterpillar neatly curled round and just filling the filter. I could only account for its presence by the fact that just before leaving home I had been strolling round the garden, and had probably dislodged the insect with my hair, whence it fell into the tank as I bent over to examine the supply of petrol prior to filling up.

Can any reader beat this for a quaint reason for a stoppage? HERBERT L. ATKINSON.

PETROL TINS ON SIDECARS.

Sir,—May I ask your readers if they have experienced the following difficulty in carrying petrol on their journeys with sidecar outfits, and if they think that a specially made two-gallon can to carry on motor cycles is needed?

I have found, in carrying the ordinary petrol tin in the petrol can holders on sidecars, that the vibration of the chassis very quickly causes a leak to develop in the ordinary can as supplied by the different petrol companies. Time after time I have put a full can in the holder on my Triumph only to find that after a few miles on the present roads a leak had developed, and that petrol was running to waste. The ordinary tins are made of a very thin gauge tin, and an experiment I have been carrying out seems to prove that a heavy gauge can could be made to stand the vibration and to stop this difficulty. I know the Triumph Co. has experienced it, as it is experimenting with a spring holder.

It is an enormous advantage to carry an extra can with one. My own practice is to do this; then, when I have emptied the can into my tank, to call at the nearest garage, take a new two gallons, tip it into my own private tin, and so save myself the difficulty I have hitherto experienced of getting the garages to split a can for a gallon or so when on a journey. It seems to me that if a really strong can could be purchased, coloured to match one's outfit and at a reasonable cost, it might meet a big sale. Queries among riders on the road seem to confirm this, as only recently I had quite a number of riders, on seeing the specially strengthened can I use on my Triumph outfit, ask where such a can could be purchased.

R. C. MEASURES.

SIDECAR V. CYCLE CAR.

Sir,—I have been a reader of your paper ever since I was a schoolboy, and have had fifteen years' experience with many different makes of cars and motor cycles, and would be grateful for the courtesy of your columns to reopen the vexed question of "sidecar *v.* cycle car." My present mount is a first-class twin-cylinder sidecar outfit, produced by a famous firm, which I bought last Christmas, as I did not feel I could run to the price of a small car. I have now come to the conclusion that this was false economy, and am selling my sidecar and buying a light car. I need hardly say that I am a married man.

For commercial purposes, or for general utility, a sidecar is undoubtedly a good proposition, but for serious touring it is very unsatisfactory. My new light car is certainly expensive, but its workmanship is magnificent. It is sold complete in every detail and with every accessory, and provides for driver and passenger the maximum of comfort and protection against the weather.

My sidecar outfit was, I admit, a very good one, as such, but its shortcomings were so many and so serious, as greatly to outweigh its merits—initial outlay, low running costs, and handiness, as compared to a cycle car or light car.

The selling price does not include many of the most necessary accessories—lamps, speedometer, horn, legshields, and, above all, it has no mechanical lubrication. Yet with all these very necessary additions the price comes out at about £250. The absence of mechanical lubrication on British machines is to me a mystery. All American machines have it, and have had it for some time, and a car fitted with the antiquated hand pump would never find a purchaser. In addition comes the outlay on special clothing, overalls, helmets, waterproofs, etc., most of them very ugly, which are a necessity to an all-weather rider, who wishes to keep himself clean, warm, and dry. In fact, clothing is an even more costly problem than flimsy accessories and useless gadgets; but it is a problem which never worries the light car driver, who can go out to dinner in dress clothes on a winter's night, a feat which would puzzle a motor cyclist.

Again, a motor cycle seems to suffer from petty and annoying breakdowns from which cars are generally immune. I have had burnt out clutches, broken control wires, choked jets, broken belts, and the shaking loose of important nuts.

Now let me take the question of comfort. The passenger in the sidecar is well provided for, but the unfortunate driver is exposed to every variation of our variable climate—mud and dust, rain and wind, he gets them all, including the vibration from the roads which are now for the most part very bad. My rear wheel is unsprung—a wretched principle—while the handle-bars are supposed to be insulated from road shocks by the spring forks. As a matter of fact, on a bad road they are not, and I cannot exceed 15 m.p.h., which becomes wearisome after fifty or sixty miles; and when I am passed at double the speed by car after car, the occupants of which do not appear to notice the state of the roads, I sigh for a properly sprung four-wheeler. This latter I now fortunately possess. It is my humble opinion that the unsprung sidecar wheel transmits a lot of vibration to the frame of the motor cycle, and I ask why all wheels cannot be sprung. One might as well buy a car with one wheel unsprung.

W. R. YOUNGER.

WHAT OUR ROADS HAVE TO STAND!

Sir,—May I draw your attention to one of the ways in which our roads are destroyed.

Last week I was returning home from London by way of Sidcup, Wrotham, Maidstone, etc., about six miles on the London side of Wrotham, when I met a steam lorry. This was dropping flaming coals on the tarred road, and the tar was burning in large patches, and for one hundred yards or so little fires were burning all about. Surely this ought to be stopped?

E. F. W. BUCKELL.

WINNER OF THE NISBET AWARD

A late arrival on the Island, possessing a late number in the race, and the last man to finish, G. W. Jones (2¼ New Hudson) nevertheless made one of the pluckiest performances of all. He is shown passing the Craig-na-baa Hotel—an unofficial grandstand.

CLOSE RATIO GEARS.

Sir,—May I request the publicity of your correspondence columns to reply to "Ixion's" remarks in a recent issue?

I must say that I have a profound respect for "Ixion's" opinion, as I know his experience is of long years of riding; and, consequently, when he calls me a "funny fellow" I suppose there is some good reason for doing so. However, that reason is rather too deep for me. As to whether I am a speed merchant. By intention, yes; but probably by comparison, decidedly no!

"Ixion" accuses me of being "perfectly oblivious" to the fact that there is "lots of choice" in the close ratio gear box line. Not guilty. I am well aware that there are close ratio gear boxes to be had, but on how big a percentage of solo machines are they standard, or even optional? How often does a 3½ h.p. solo require a 13½ to 1 bottom gear (I did not say "use" a 13½ to 1 gear) when under usual conditions? And yet we find a very large number of solo machines with gears of about 5 to 1, 8½ to 1, and 13½ to 1. Yes, I know the answer will be "traffic." A Rudge-Multi (1in. belt) with a bottom gear of about 6 to 1 is perfectly tractable in London traffic, according to my experience of the breed (I have owned four of them); and, moreover, with this same bottom ratio have climbed Edge Hill, two up, after putting up a 30 m.p.h. average from Southam (without a stop at the foot of the hill).

The larger number of modern motor cyclists serve their novitiate on a flat twin, two-stroke, or else a sidecar outfit of the big twin order, where one opens the throttle to accelerate, and lifts the exhaust valve and stands on the brake to stop. Consequently, it takes them twice as long (and may be longer) to learn to get the best out of an engine. Hence the need for wide ratio gear boxes. Those who learnt on a single gear single-cylinder do not need this type of box, hence my suggestion that closer ratios can be with advantage made optional. It should not be necessary (as "Ixion" suggests) to apply to the gear box makers.

I have a leaning toward belt drive, not only because of the variable gear obtainable, but also because, in the case of an engine seizure (granted, not a frequent occurrence) the belt does slip, and one does not fare quite so badly as would be the case if chain drive was fitted.

In regard to "Ixion's" remarks *re* B.M.C.R.C. meetings and speedometers, I seem to remember Emerson racing last year with a speedometer on his A.B.C., or was it a revolution counter? Another bold man!

What with "bold men" and a "funny fellow," who is afterwards "dead right," things are rather complicated, *n'est-ce pas*, Mr. Editor?

I hope "Ixion" will continue to find me as amusing as I find his "Comments" interesting and instructive.

L. W. G. HARTLEY.

FASCINATING BELT DRIVE.

Sir,—I have just finished my first thousand miles on a 1921 3½ h.p. Rudge Multi, and must pay a tribute to the extraordinary fascination of the variable pulley idea. Much of what I have to say applies equally to other machines of the same type, such as the Zenith.

The point soon strikes one that the gear has possibilities very different from the ordinary type. The ideal is to keep the lever constantly in action, more or less like the throttle lever, and I find the engine is even more sensitive to movements of the gear lever. My machine has twenty notches on the gear quadrant, yet the movement through one notch has always a noticeable effect: at some speeds it is very pronounced. On wet roads the high gear of 3½ to 1 is used, as belt slip with rubber belts is somewhat marked on opening out. With a little experience, one is soon able to find a position where the speed remains at 20 m.p.h. without slip. On hills or roads other than tarred, belt slip in wet weather is less. (The modern tarred road dries quickly, but while it is wet it is *very* wet. The sight of a fast car moving, surrounded by a cloud of spray like a torpedo boat destroyer, is something we never saw in the old days.) I do not object to this slip: it gives a smoother motion, and lessens the tendency to skid. Comfort, as regards mud slinging, and safety alike suggest a moderate speed on the two-wheeler when it is wet. In hill-climbing under the worst conditions of wet, one drives entirely on the gear, raising and lowering it as slipping appears or disappears—altogether a novel and interesting method.

Belt slip seems entirely dependent on belt speed. I am told that slip in wet weather is less with leather or canvas belts, but I have not tried the experiment. It is much more interesting to control belt slip by gear lever manipulation. This control enables one in dry weather to run with a very slack belt. In practice it really comes to this: that in dry weather one has less slip with these variable pulleys than with even the large countershaft type—a statement hard to accept until one has had experience with them.

On level roads with a following wind, or down slight inclines, one puts in the highest gear, which affords a most delightfully swift, noiseless motion, with the engine just ticking over. The ordinary machine with a high gear of 5 or 4½ to 1 has nothing like this to offer.

Acceleration, when gear and throttle are moved in unison, is extraordinary, permitting of quick and really safe cornering. After a time one gets to know the feel of the combination of the two, so that the engine runs constantly with a smooth, effortless action: there is none of the sense of labouring that even the best of the "one-lungers" at times shows in picking up.

Without labouring the point further, I have said enough to show that the logical position for the gear lever is on the handle-bar in this type of machine, for it is continually used, more like the throttle than like an ordinary gear lever.

I have often wondered if any of your readers have tried to operate the lever from this position; the necessary fitments would not seem to be difficult to arrange. Perhaps some of the ingenious accessory makers might take it up. It would, I know, appeal to many Rudge riders.

There are other details about the Rudge which attract one. The tank holds well over two gallons, so that one can depend on its taking the whole contents of the standard two-gallon tins. A tank which only just takes two gallons will not do this unless practically empty. The foot control for lubricating, the large tyres, the hinged section of back mudguard for exposing the back wheel in tyre repairs, the enormously strong wheels, the perfect balance for pillion work, etc., are other points. But the great outstanding feature is the variable gear, and the one thing required to make this fully available is handle-bar control.

Lancaster. MEDICUS.

SUMMARY OF CORRESPONDENCE.

Mr. J. W. Saxton calls attention to a remarkably good performance on a 2¼ h.p. single-geared Levis. He toured 1,900 miles in fourteen days from London to Land's End *via* York, Edinburgh, Glasgow, Carlisle, Liverpool, Barmouth, and Bristol, and then continuing back to London *via* Sidmouth.

One or two letters continue to reach us on the subject of the drying-up of magneto chains. Thinking the trouble may be caused by the heat of the engine, Mr. W. Ward recommends ordinary foundry plumbago as a lubricating medium.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

	Price net.	Book post.
"MOTOR CYCLES AND HOW TO MANAGE THEM." The standard handbook on the motor cycle. It deals with every part of the machine, and with every type of machine, and will be found invaluable to all motor cycle riders. New Edition. Just published	2/6	2/10
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/-	2/3
"MAGNETOS." By A. P. YOUNG. A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes, from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES." By "IXION," of *The Motor Cycle*	5/-	5/3
"THE MOTOR CYCLE" ROAD MAPS, England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10
"THE MOTOR CYCLE" ROUTE BOOK. With 32 pages of Road Maps of England and Wales, Scotland, and the London District ..	5/-	5/4

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. **ROUTES.**—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

RAISING THE GEAR.

I have a 1919 4¼ h.p. B.S.A., which is rather slow for solo work; would you advise me to put a smaller sprocket on the back wheel, and if so, where could I get one made?—P.S.A.

If you wish to raise the gear it would be better to fit a larger driving sprocket on the countershaft. No doubt the makers of the machine would supply you with one.

TWO-STROKE FLAT TWIN IGNITION.

I have a 4-5 h.p. Levis flat twin two-stroke engine, and on examination I find that both cylinders fire together. Can you enlighten me as to whether I could use two double pole plugs in conjunction with a single-cylinder magneto running at engine speed, or is it essential that I should have a special two-spark magneto?—H.E.S.

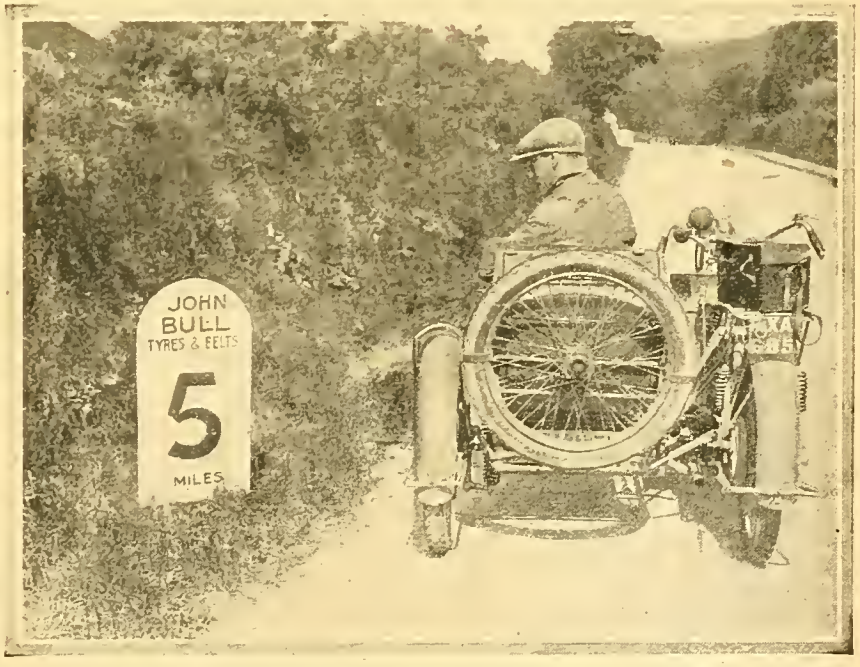
The most satisfactory method of running a two-stroke flat twin which fires simultaneously is to use a special two-spark magneto. Such magnetos were made during the war for the engine which you have, and you might be able to obtain one still. If you attempt to use a single-cylinder magneto with double-pole plug, you only require one of these special plugs in conjunction with an ordinary one in the other cylinder, the two plugs being connected in series. As a general rule, double-pole plugs do not give very long service, as the space available for insulation is very limited.

TRADE NUMBER PLATES.

(1.) Is a licence necessary to deal in new or second-hand machines? (2.) Could I obtain a special number for registration to use on any machine when riding it home? If so, to whom should I apply? (3.) In the case of the sale of a second-hand machine or a new machine, am I liable to pay any taxes whatever if I do not use the machine?—M.R.

(1.) No licence is necessary. (2.) Trade registration numbers may be obtained from the local registering authority, but they must only be used on machines under test or on demonstration runs; moreover, each time a machine so numbered is taken out the details must be entered in a log book, which must be always available for police inspection. (3.) There is no need to pay a tax on a motor cycle provided it is not ridden (such as any machines which you take into stock). If a machine is taken on the road under its own power, the owner becomes liable for taxation, unless, of course, it carries trade number plates and is being used for above-mentioned purposes.

LIGHTWEIGHT VALVE TIMING.



What is the correct valve and ignition timing of the Precision Junior engine (1914 model)?—G.O.

Time the valves so that the exhaust is just closing and the inlet just commencing to open when the piston is on top dead centre of the stroke. The spark should occur when the piston is on top dead centre of the compression stroke, with the ignition control two-thirds retarded; should the magneto be of the fixed ignition variety, however, time the spark so that it occurs when the piston is 4 mm. before the top of the stroke.

TWO-STROKE MISFIRING.

(1.) I have an O.K. Junior motor cycle, 2¾ h.p. Villiers engine, fitted with Amac carburetter. The machine runs well, but apparently will take no air. On opening air lever very slightly, a violent banging in silencer ensues, and a falling off in speed is noticed. Can you explain, please? If the engine is run on the stand and the air lever advanced, banging is followed by puffs of smoke from the exhaust pipe. Petrol consumption is excessive. (2.) Using petroil lubrication, can 25% benzole be mixed with petrol?—F.R.W.

(1.) Unless there is some obstruction in the petrol supply, it would appear that the jet is too small. You do not state what the consumption is, but we would suggest that you lower the level and fit a larger jet. (2.) You can mix benzole with petrol in any quantity, or use it entirely if you desire, and it is quite possible to use the "petroil" system.

One of the white posts (clearly defining every mile of the T.T. course) which were put up by the makers of John Bull tyres. These "milestones" were much appreciated by competitors and spectators alike.

A STUCK UP VALVE.

When starting up the engine of my 8 h.p. Enfield recently, I was unfortunate enough to have the carburetter on fire. I was, however, able to smother it without much damage, but fear a repetition. Can you suggest a reason? The same thing occurred once before, but it was attributed to sticking valves, which were afterwards reground, and the trouble was apparently cured. This cannot be the cause now, as the engine has been taken down and valves ground in, since when it has only had a trial run of about five miles. After the engine has started up, is there any chance of a fire on the road—I mean while running?—S.W.

The trouble is most probably caused by the inlet valve sticking, and, even though the engine had only lately been assembled, there is no reason why this should not happen. Probably there was some congealed oil on the valve stem which prevented it returning quickly on to its seating. At the same time, fires on motor cycles are very unusual, whether due to this or any other cause. There is usually little chance of a fire taking place when the machine is actually running.

READER'S REPLY.

AN ELUSIVE TRANSMISSION KNOCK.

In a letter in your issue of June 2nd, your correspondent "E.C." describes exactly the same thing which occurred to me recently while riding a 2¼ h.p. Levis, and perhaps my experience may be of service. I thought the big end was worn, but eventually found this was not the case, and that the fault was due to a deposit of hard burned carbon underneath the second piston ring. After cleaning, the machine ran perfectly, and I ascribe the original cause to unsuitable (*i.e.*, too thin) oil.—MULTUM-IN-PARVO.

RECOMMENDED ROUTES.

DERBY TO KIMBOLTON.—D.J.B.

Derby, Alvaston, Kegworth, Loughborough, Quorn, Mountsorrel, Leicester, Oadby, Great Glen, Kibworth, Market Harborough, Desborough, Rothwell, Kettering, Barton Seagrave, Burton Latimer, Irthlingborough, Higham Ferrars, Kimbolton. Approximately 74½ miles.

NEWPORT TO BARNSTAPLE.—A.E.D.

Newport, Chepstow, Lydney, Newnham, Gloucester, Quedgeley, Eastington, Cambridge, Berkeley Road Station, Stone, Alveston, Almondsbury, Bristol, Churchill, Sidcot, Highbridge, Pawlett, Bridgwater, North Petherton, Bathpool, Taunton, Milverton, Wiveliscombe, Bampton, South Molton, Swimbridge, Barnstaple.

WEMBLY TO YARMOUTH.—E.A.C.

Wembly, Bushey Heath, Elstree, Radlett, St. Albans, Hatfield, Stevenage, Baldock, Royston, Whittlesford Station, Six Mile Bottom, Newmarket, Barton Mills, Thetford, Larlingford, Attleborough, Wymondham, Norwich, Thorpe, Blofield, Acle, Burgh St. Margaret, Filby, Caister, Yarmouth. Approximately 142½ miles.

NEWCASTLE-ON-TYNE TO BATH (*via* NOTTINGHAM).—R.S.J.

Newcastle-on-Tyne, Durham, Ferryhill, Aycliffe, Darlington, Stapleton, Barton, Scotch Corner, Catterick, Leeming, Baldersby Gate, Ripon, Ripley, Harrogate, Spofforth, Wetherby, Bramham Moor Cross Roads, Aberford, Ferrybridge, Barnsdale Bar, Doncaster, Wadworth, Tickhill, Oldcoates, Carlton, Worksop, Welbeck Abbey, Cuckney, Market Warsop, Mansfield, Nottingham, Beeston, Long Eaton, Castle Donington, Ashby-de-la-Zouch, Measham, Tamworth, Fazeley, Coleshill, Stonebridge, Kenilworth, Warwick, Stratford-on-Avon, (edge of) Clifford Chambers, Mickleton, Weston-sub-Edge, Willersey, Broadway, Winchcomb, Cheltenham, Shurdington, Painswick, Stroud, Nailsworth, Dunkirk, Bath. Approximately 302½ miles.

Important Dates.

Fri., July 1st, and Sat., July 2nd—Arbutbnot Trophy Trial.

Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.

Sat., July 2nd—500 Mile Race at Brooklands for the Miller Gold Cup.

Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.

Sat., July 9th—St. Andrews Speed Trials

Sat., July 9th—Cardiff M.C.C. and associated clubs Open Hill Climb.

Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.

Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.

Sat., July 23rd—Fast Midland Centre A.C.U. Open Speed Trials

Sun., July 24th—Motor Cycle Grand Prix Race in France.

Sat., July 30th—Newcastle and District M.C. Open Speed Trials.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Sat., Aug. 6th—B.M.C.R.C. Open Brooklands Meeting.

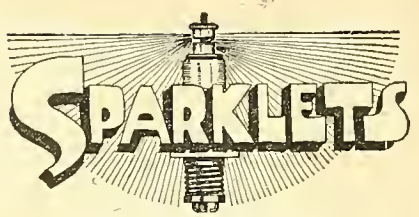
Sat. Aug. 6th—North Wales M.C.C. Open Reliability Trial.

Fri. Aug. 12th—Motor Cycle Grand Prix in Belgium.

Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.

Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.

Thurs. Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.



Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

HUCKNALL TO BUDLEIGH SALTERTON.—G.R.

Hucknall, Nottingham, Beeston, Long Eaton, Castle Donington, Ashby-de-la-Zouch, Measham, Tamworth, Fazeley, Coleshill, Stonebridge, Kenilworth, Warwick, Stratford-on-Avon, Mickleton, Weston-sub-Edge, Willersey, Broadway, Winchcomb, Cheltenham, Painswick, Stroud, Nailsworth, Dunkirk, Bath, Corston, Marksbury, Farmborough, High Littleton, Farrington Gurney, Wells, Priddy, Cheddar, Westbury, Glastonbury, Somerton, Ilchester, Ilminster, Peasemarsh, Chard, Yarcombe, Honiton, Sidbury, Sidford, Newton Poppleford, East Budleigh, Budleigh Salterton. Approximately 253 miles.

Through Feminine Goggles.

The house making *The Motor Cycle* ladies' costumes to Miss Peggy Fraser's designs is "Billy's," Grove Arcade, Wallasey, Cheshire, and not "Bisley's," as mentioned recently.

A Low-priced Monocar.

What must now be the cheapest four-wheeler on the market is the A.V., which with full equipment is being offered at the round figure of £100 by A.V. Concessionnaires, Ltd., 15, Woodstock Street, London, W.1.

Guaranteed Petrol Consumption.

In a series of "talking points" issued by the Wobler Motor Cycle Co. to their agents, an estimation of running expenses is included. Petrol is given as a cost of .24d. per mile, or 145 m.p.g.; this, incidentally, is the figure guaranteed as a minimum.

A North-eastern Coast Garage.

The Spa Motor and Engineering Co., of Avenue Victoria, Filey Road, Scarborough, have reopened their motor cycle depot after reconstruction. Their premises were completely destroyed by fire in December last.

Faded Licences.

Recently two motor cyclists were summoned because the handwriting on their licences had faded through exposure to sunlight; and, in consequence, Messrs. H. C. Stephens, the well-known manufacturers of writing-inks, have forwarded a sample bottle of their ink—which they guarantee will not fade—to every licensing authority in the United Kingdom.

Rudge Wrinkles.

Always useful, the latest edition of the well-known Rudge instruction booklet is one of the most complete of its kind published by any motor cycle manufacturer. Not only does it contain a mass of useful hints and tips, but it embodies a volume of interesting data regarding Rudge machines of various years of manufacture.

Some British Successes in Holland.

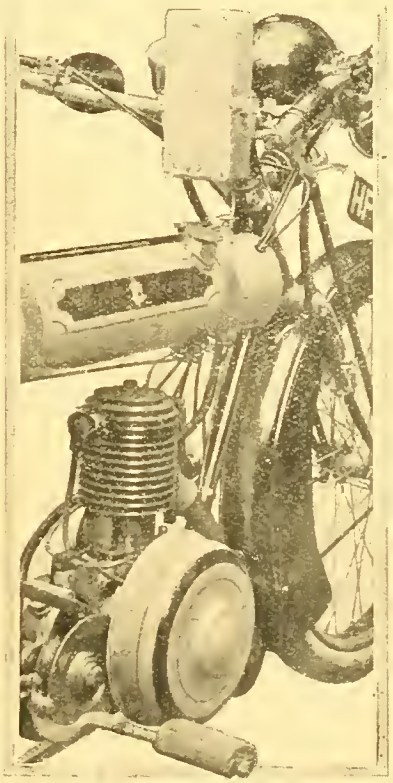
Douglas machines have been performing successfully in Holland recently, and secured the first five places in the Niewelingen Trial on May 1st, and the first three places in both the Apeldoorn of 660 km. on May 22nd and 28th-29th respectively. Three first places were secured by Jac. Brunt. In addition to the above, machines of the same make were ridden into first and second places in the premier race at the Veendam grass track, and first place in the Newcomers' Race on June 5th.

Catalogues Received.

Ariel Works, Ltd., Bournbrook, Birmingham: The Ariel catalogue is well printed, and, in addition to excellent illustrations of the various machines reproduced on a large scale, it contains a number of pictures of Ariel machines in various reliability trials.

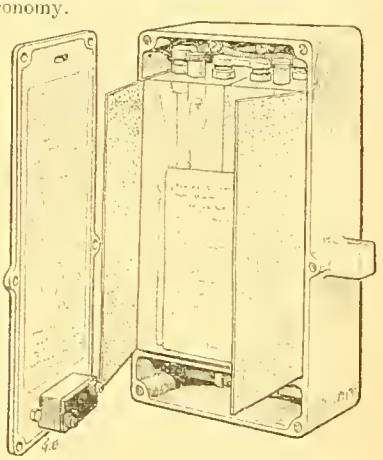
A NEW FLYWHEEL MAGNETO AND LIGHTING SET.

A B.T.H. Instrument producing equal Spark Efficiency throughout the Ignition Range, and providing the Necessary Current for Lighting Purposes.



FOLLOWING up the success of their Sparklight magneto lighting set for two-strokes the B.T.H. Co. is introducing a flywheel magneto for combined ignition and lighting purposes.

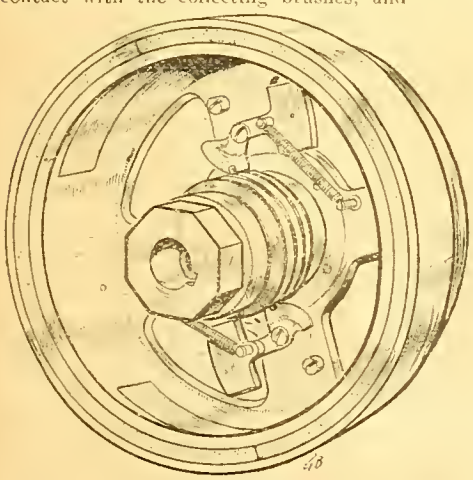
The construction of the new instrument is simple and admirably carried out. On a back plate capable of rotation through an angle of 30° are mounted the laminated field, combined high and low-tension coils, condenser and aero-type contact breaker. The first mentioned items need no description, but the contact breaker is mounted on a bronze bush, the hollow spindle being lubricated by a wick feed. The rotating portion or flywheel is built up of 40 ton bronze, developed by the B.T.H. Co. for heavy turbo work. Into an inner ring are cast the laminated poles, and round this ring lie two semi-circular magnets having ground contact surfaces and being attached to the poles by screws, while surrounding the whole is an outer case of the same 40 ton bronze. Carried on the boss of the rotating member is the contact breaker cam which operates the rocker arm in a normal manner.



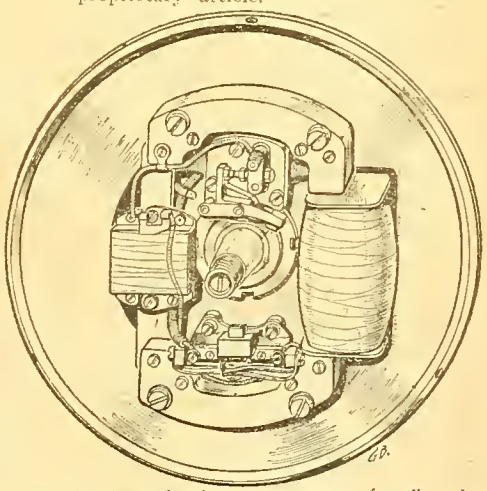
No Separate Lighting Coils

Current for lighting purposes is obtained in an exactly similar manner to that employed in the Sparklight set—that is, the idle maximum which occurs in all engine speed single-cylinder magnetos is employed to charge an accumulator. The collecting brushes revolve idly on brass strips in the distributer until the engine attains about 600 r.p.m., at which speed the distributer is moved laterally by the action of spring-controlled centrifugal weights. Lateral motion of the distributer brings the necessary segments into contact with the collecting brushes, and above 600 r.p.m. the accumulator is always on charge. A spun aluminium cover protects the instrument from water and dust. A special five-candle power bulb has been introduced by the B.T.H. Rugby works to suit the new set. The accumulator, which is similar to that used with the Sparklight, has, when fully charged, sufficient capacity to provide light for ten hours, even without the additional charge which is constantly being provided. Carried on the handle-bars in an aluminium case this accumulator is readily accessible, the whole of the back plate complete with switch being detachable after removing six screws. The two terminal wires are easy of access, and the accumulator may be withdrawn by means of projecting flaps formed as part of the rubber packing.

It is claimed that the new instrument, besides providing lighting current, is cheaper than a magneto, since it saves a drive, provides better slow running and increased fuel economy.



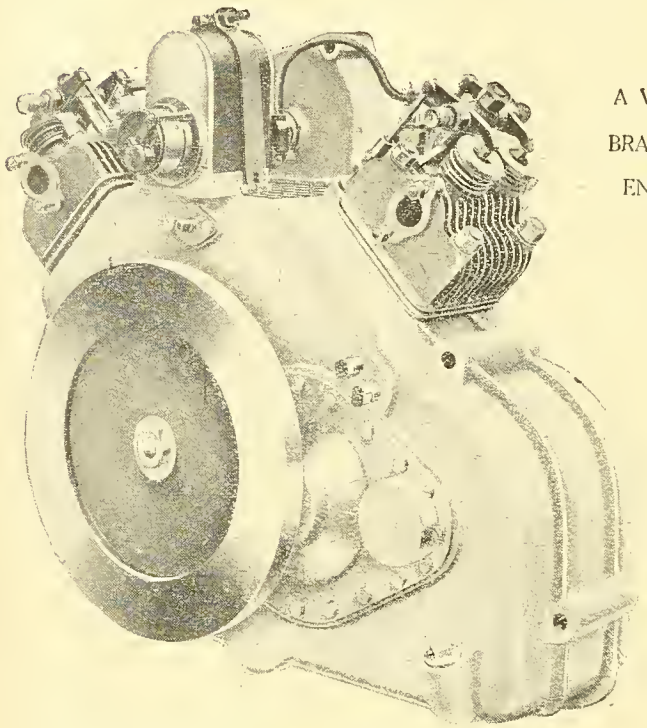
The B.T.H. combined lighting and ignition set fitted experimentally to a Triumph Junior. An important feature is the enclosing of the flywheel magneto in a waterproof case.



In the latest accumulator box the whole aluminium froot is readily detachable complete with switch; the accumulator only can then be moved by means of the extension of the rubber packing piece.

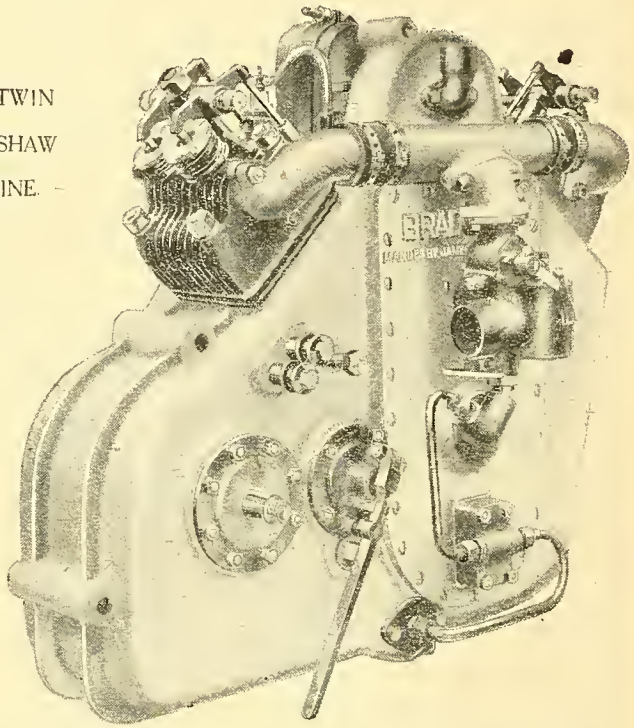
From a short run on the road we can speak highly of the slow-running qualities of a Triumph Junior fitted with the B.T.H. flywheel magneto, for it was possible to turn in small circles and cut figures of eight in a normal roadway without touching the controls and without a sign of four-stroking.

It will be interesting to watch the development of this new device, for though the Villiers flywheel magneto is already well-known, the B.T.H. combined ignition and lighting set is the first instrument of its type to be placed on the market as a proprietary article.



On the boss of the rotating member are carried the contact-breaker cam and the distributing segments. The latter are capable of being moved laterally by centrifugally operated weights; between the inner and outer bronze casings lie semi-circular magnets.

Back plate, showing arrangement of coil and contact breaker, laminated fields and collector brushes for lighting set.

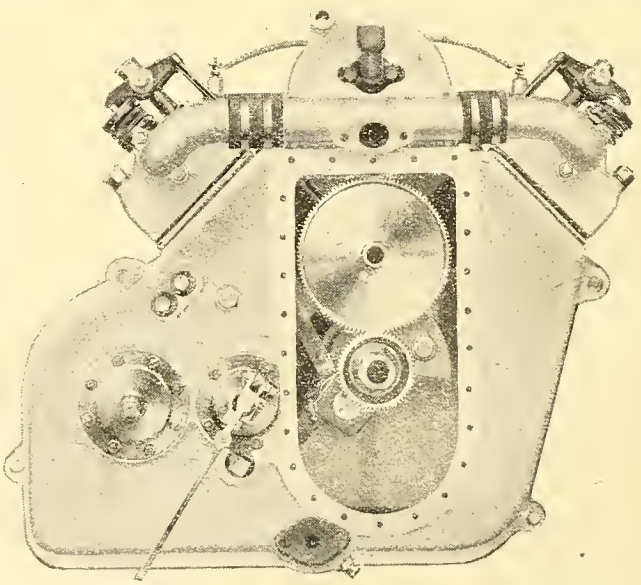


THE PROGRESS OF OIL-COOLING.

A 90° V Twin cooled by Oil Circulation and combined with a Four-speed Gear Box and Plate Clutch.

Flywheel side of the Bradshaw engine and gear unit. Note the grease cups for lubricating the overhead rockers.

A V TWIN BRADSHAW ENGINE.



Final drive side of the 90° oil-cooled Bradshaw engine. Observe the clutch control and driving spindle of the four-speed gear box.

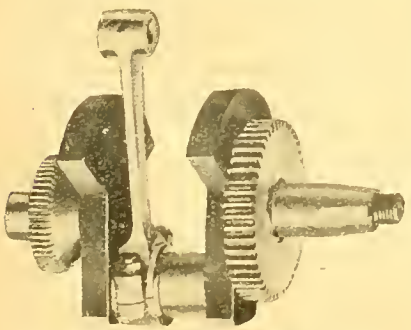
UNDOUBTEDLY one of the most advanced engine designs recently produced is the oil-cooled 3½ h.p. horizontal twin evolved by Mr. Granville Bradshaw, and embodied in the Zenith machine which was such a centre of interest at the last Olympia Show.

A larger engine, on more ambitious lines, has now been produced, and, as the same principle is adopted, it may be well to recapitulate the essential features. During the course of experiments on various cooling systems, it was found that a large proportion of the heat dissipated was radiated from the crank case surface. Accordingly Mr. Bradshaw pursued this theme, and, as lubricating oil played an important part in transferring heat from the piston and cylinder to the crank case, the logical result was to increase the amount of oil present in the crank case, and to increase also the surface of the crank case for radiator purposes.

The difficulties which have to be contended with in designing an air-cooled cylinder were set forth by Mr. Bradshaw in *The Motor Cycle* of May 26th and June 2nd: and, in order to grasp the *raison d'être* of oil-cooling, those articles should be carefully studied.

As regards the new engine, this is a 90° V twin of 90×77½ mm. bore and stroke (986 c.c.), and at first sight it appears to consist of a clean aluminium box casting, through which protrude the two cylinder heads. The cylinders are plain cast iron barrels, devoid of ribs, with a rectangular flange at one end. The detachable heads carry two overhead valves, and are well ribbed for cooling purposes: these also have rectangular flanges. Both cylinder barrel and combustion head are held down by four long studs, and the cylinder barrel is thus wholly inside the crank case. A balanced crankshaft is carried in a plain phosphor bronze bush on the off side and a large Hoffmann ball bearing on the near side, an outside flywheel being employed, of course. Aluminium pistons, with two rings of narrow section in the head and an oil scraper ring in the skirt, leave the middle portion of the skirt recessed to a considerable depth, and the gudgeon pins are allowed to float in the piston bosses. The piston heads are slightly concave, and no ribs are utilised beneath them.

The cover-plate removed, showing the timing gear. This cover renders accessible the split big end bearings.



As an instance of the ample size of all bearing surfaces, it may be mentioned that the mainshaft is 1¼in. in diameter, while the big end bearings are

The Progress of Oil-cooling.—

of 1½in. diameter × 1¼in. in length. Split big end bearings are a commendable feature, and they may be dismantled through the large aluminium cover which extends from top to bottom of the crank case on the off side. Accessibility of all components has, indeed, been carefully studied, and the engine is so designed that it may be completely dismantled or erected without taking the crank case out of the frame.

One-piece Camshaft.

The camshaft has four cams formed integrally with it, and is driven by a train of gear wheels from the mainshaft, operating the four valve tappets through the agency of rocking levers. A Fellows magneto is at present fitted on the top of the crank case, and provision is made to prevent too much heat being conducted to it therefrom. It is secured by a strap, and is driven by a simple quickly de-

The one piece crankshaft with side-by-side big ends. The massive proportions of the crank pin will be observed.

tachable coupling. The cover of the magneto driving wheel has cast with it the centre section of the inlet pipe, so that this is brought to a temperature which should assist vaporisation of the charge. Two flexible joints are inserted in the induction pipe in order to allow for any distortion or expansion which might conceivably cause trouble were a single one-piece pipe fitted.

Valve gear details have been simplified so that trouble should be well nigh impossible. The rocking levers have bearings ⅝in. in diameter, and are each lubricated by a large greaser. A single substantial pillar supports both rocking levers, and each valve has two concentric springs, so that, should one break, the valve cannot fall down into the cylinder head. The tappet rods have a simple and accessible adjustment.

So much for the power unit. There is, however, incorporated with it a four-speed gear box, plate clutch, and kick-starter. The gear box shafts are parallel with the mainshaft, and the clutchshaft carries clutch, gear wheels, kick-starter pinion and ratchet, and clutch stop. This complete assembly may be detached by removing the smaller gearshaft cover plate on the near or flywheel side of the engine.

The clutch consists of thirteen steel plates housed in the constant mesh gear wheel, to which one set of plates is secured by six splines. The other set of plates is secured to the clutchshaft by four splines, and the two sets of plates are normally held together by a spiral spring situated in the hollow clutchshaft, and acting on the clutch spindle and a substantial end plate.

Both gearshafts are short and rigid, and the gear wheels are exceptionally large for motor cycle practice. The kick-starter ratchet is particularly sturdy, and is operated by a rack in the usual manner. The driving-shaft assembly is easily dismantled by withdrawing the shaft when the gear wheels, which are carried on large splines, remain in the crank case. Ball bearings are utilised for both gearshafts. The selector gear is adjustable, and, together with the driving-shaft, present the only points at which oil might possibly leak when wear takes place.

Oil-cooling in Practice.

There now remains the lubrication and cooling system to be described, and as this affects not only the power unit but the gears, it is appropriate that it should be dealt with last. The crank case is made to accommodate the four-speed gear box in order to increase the surface available for the radiation of heat. About one and a quarter gallons of oil is contained in the crank case, and a simple gear wheel oil pump draws oil through a large and easily removable filter and delivers it to the hollow crankshaft, whence it is forced to the big end bearings. By way of the oil grooves the oil is then forced out at the sides of, and between, the two big end bearings, so that three copious streams of oil are thrown on to the cylinder barrels, camshaft, and gearshafts efficiently lubricating the whole engine.

It is by means of this constant flow of oil, which is at the rate of half a gallon per minute, that heat is transferred from the pistons and cylinders to the walls of the crank case, whence it is dissipated by the air currents passing over the crank case.

Throughout the engine detail design has been carefully thought out, *e.g.*, a small ball thrust race is inserted in the clutch mechanism; valves, cylinder barrels, and combustion heads are interchangeable for front and rear cylinders; the vertical Claudel-Hobson carburetter may be replaced by a horizontal type by reversing the elbow; a crank case release valve of simple but effective design is fitted; and the crank case has been provided with lugs for its easy installation in the frame.

For Cycle Cars.

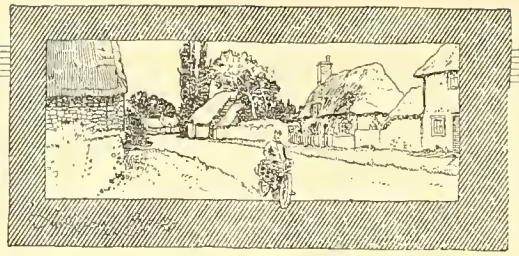
An engine is also to be produced without the gear box and clutch, in this case the oil sump being somewhat longer, with a view to its use on cycle cars, where the engine is carried across the frame at the front. For cycle cars and light cars the engine will have a longer stroke—86 mm.—bringing it up to 1,100 c.c.

Quite an unusual system of cylinder construction is employed, the whole of the cast iron barrel being sunk within the crank case, and oil being used as a cooling medium.

The first experimental engine was recently dismantled for our inspection after we had seen it running on the test bench, and after forty hours' running the piston heads were entirely free from carbon. A small amount of carbon was present on the combustion heads. The cylinder barrels were also quite bright and free from any discolouration, so that there can be little doubt of the efficiency of the cooling system. The oil when drawn off from the sump was also clean and free from carbon particles. The engine runs extremely quietly, and is free from the "rattle" associated with air-cooled engines.

The engines, and all other Bradshaw productions, are now being handled by Mr. Gilbert Campling, 90, Jermyn Street, London, W.

THE ARBUTHNOT TROPHY TRIAL.



THE importance of a reliability trial need not always be measured by the number of entries received. So far as entries are concerned, the Arbuthnot Trophy Competition has been notoriously unlucky: but, while the entry list for the event on July 1st and 2nd is not surprisingly large, it is better than it ever has been.

The trial starts at 9 a.m. on Friday, July 1st, from Bligh's Hotel, Sevenoaks, and continues over a sporting course, and will finish up at Brooklands on Saturday afternoon in time for the competitors to see the finish of the 500 miles race.

Though entries are nominally closed, the secretary of the Auto-Cycle Union, 83, Pall Mall, London, S.W.1, taking into consideration the difficulties under which naval officers labour, will be pleased to consider the acceptance of further entries if they are sent in immediately. The entries are as follows:

Lieut. J. Graham, jun., R.N. (Triumph).
Lieut. H. P. D'A. Benson, R.N. (2¾ Omega-Jap).
Eng. Lieut. Com. A. K. Diblev, R.N. (Indian).
Eng. Lieut. Com. S. G. Wheeler, R.N. (4 Coulson-B).
Sub-Lieut. Cane, R.N. (Reading-Standard).
Sub-Lieut. H. B. Baker, R.N. (6 A.J.S.).
Lieut. R. C. Hovenden, R.N. (8 Zenith).
Lieut. C. Plumer, R.N. (——).
Lieut V. H. Giddy, R.N. (Scott).
Lieut. L. A. Heath, R.N. (Bat).
Lieut. W. Derek Stephens, R.N. (4 Douglas).
Sub-Lieut. A. M. Kimmins, R.N. (——).
Sub-Lieut. R. T. Grogan, R.N. (6 Zenith).
Sub-Lieut R. O. Bellasis, R.N. (Scott).
Sub-Lieut. W. G. L. Cooper, R.N. (Scott).
Sub-Lieut. T. E. N. Knox, R.N. (Triumph).
Lieut. T. H. Back, R.N. (Triumph).
Lieut. W. S. Jameson, R.N. (Sunbeam).
Lieut. P. V. James, R.N. (5 N.U.T.)
Sub-Lieut. H. V. Chads, R.N. (Triumph).

Found.

Passing East Croydon Station on a recent Sunday, a reader, who signs himself "Sprocket," picked up a Voltalite dynamo. Any applications for this will be forwarded to the finder.

Hospital Collections during T.T. Week.

Following the usual custom, various collections were made during T.T. week for Noble's Isle of Man Hospital. A cheque value £100 was handed by Mr. Alec Ross to the Deemster on Thursday, after the Senior race, and a further cheque for £13 4s. 8d., the proceeds of later receipts, was forwarded on the 21st inst.

Motor Cycle Grand Prix Race.

There are still available a few of *The Motor Cycle* reserved tickets for the grandstand at the Grand Prix.

The Automobile Association has reserved a number of berths for cars or motor cycles on the boats to French ports. Members intending to go over to France for the Grand Prix may take advantage of the few still available between July 16th and 20th, but, to avoid disappointment, they should make immediate application to the Secretary, A.A. and M.U., Fanum House, Whitcomb Street, London, W.C.2.

Research.

It is interesting to note that the manufacturers of the winning machines in this year's T.T. races, including the winner of *The Motor Cycle* Cup, are members of the British Motor Cycle and Cycle Car Research Association.

South Wales Open Hill-climb.

Representing the motor cycle clubs of Bargoed, Cardiff, Newport (Mon.), and Tredegar, the South Wales Motor Cycle Open Competition Committee is holding an open hill-climb on Catsash Hill, near Newport, at 1 p.m., on July 9th. There will be two challenge cups in the award list.

Over £8,000,000 from Taxation in Five Months.

Taxes should be lower next year, since the amount asked for by the Ministry of Transport for the repair of roads has been exceeded during the *first five months* of this year. £8,436,000 has been collected, which amount includes £760,000 from motor cyclists, the average amount per licence holder being £2 1s. Only sixty invalid vehicles at 5s. have been licensed.

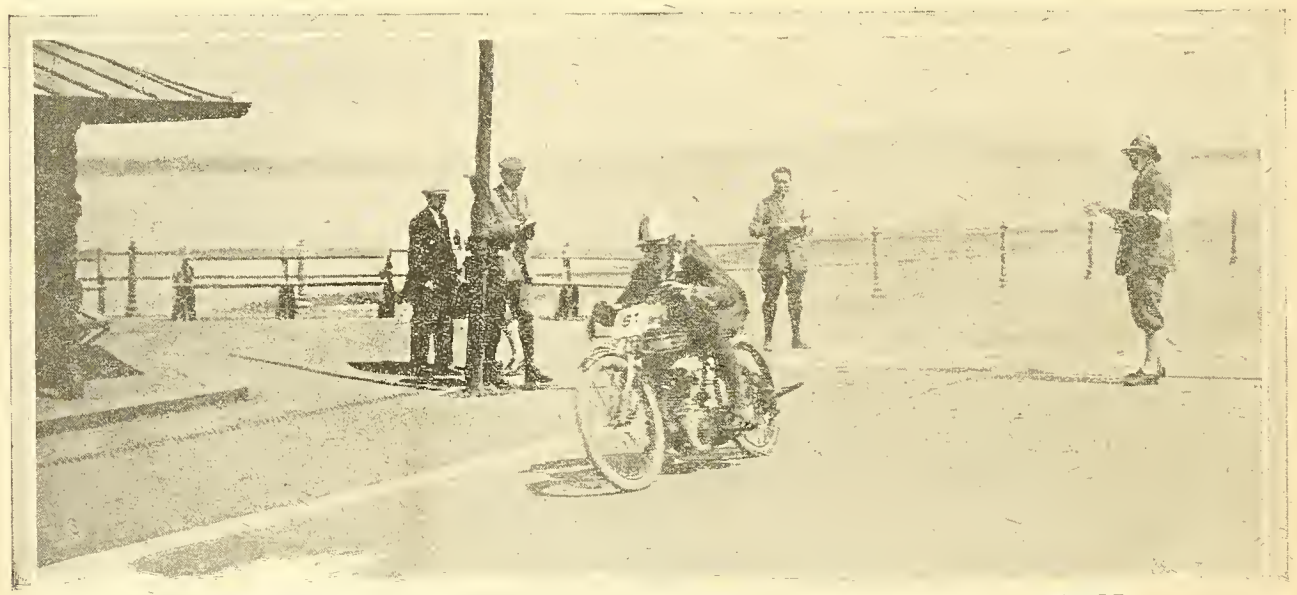
Civic Welcome for T.T. Winners.

On their return to Wolverhampton after the T.T. races, an enthusiastic civic welcome was accorded H. R. Davies and Eric Williams (winners of the Senior and Junior T.T. respectively). Large crowds assembled in the decorated streets, and, headed by a local band, a procession marched to the station to receive the returning heroes.

"Smelly Motor Bikes."

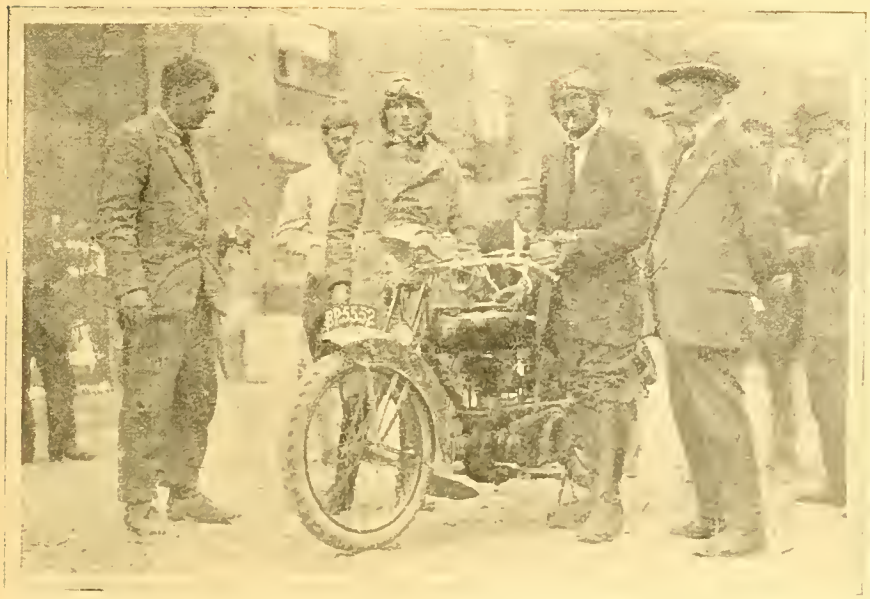
This is the absurd heading of a small paragraph in a Grimsby paper reporting the prosecution of several motor cyclists "for allowing the exhaust gases to escape into the atmosphere. Fines of 10s. were imposed. . . ." That's all!

Ride with Caution.



On the Liverpool-Ormskirk road, between the ninth and tenth milestones, there is a quarter-mile stretch of road in an appallingly bad condition, caused by heavy traffic on a newly-made road before it had set. A local reader sends us the warning.

Going North.



Those contemplating Scottish tours should note that the inner road from Newcastle to Edinburgh *via* Galashiels and Jedburgh is in a very bad state. "Particularly is this so," says one of our readers, Mr. W. T. Rawcliffe, "from Carter's Bar to Otterburn." Intending tourists would do better to follow the main road.

Scottish Speed Championships.

In addition to the five-lap Scottish inter-club team race, there are eight open classes and three confined to private owners on the programme of the Scottish Speed Championships to be held at St. Andrews on July 9th—all these events being for solo machines only. There are also two open sidecar races. Eliminating trials will be held if the entry list becomes unwieldy.

NORTH-WESTERN CENTRE A.C.U. OPEN SPEED TRIALS ON MORECAMBE PROMENADE.
G. W. Walker (3½ Norton), winner of the 500 c.c. solo class, at the start of the event.

JOHN-o'-GROAT S TO LAND S END. In order to demonstrate the reliability of the XL motor cycle—a new production—the manufacturers, as a debut, entered it for a "non-stop" trial from John-o'-Groat's to Land's End, under A.C.U. observation. The above illustration depicts a fuel halt at Bristol on Saturday evening. The Trial was successfully concluded on Sunday.

A Remarkable 350 c.c. Engine.

Next week's issue of *The Motor Cycle* will contain a technical description of the remarkable 350 c.c. A.J.S. engine which won both Senior and Junior T.T. races.

The International Six Days.

It has been decided that entries for the International Six Days trials in Switzerland may be accepted at ordinary fees up to July 10th and at double fees to July 15th.

Westcliff Speed Trials.

A very large entry in all classes has been secured for the joint open speed trials of the Essex M.C. and the Essex County and Southend and District A.C., to be held at Westcliff on Thursday next (July 7th).

Souvenir cuff links presented by the A.C.U. to the marshals at the T.T. races.

The M.C.C. at Brooklands.

On July 9th, the M.C.C. will hold its eighth Brooklands meeting. There will be handicap and scratch races for 350 c.c., 560 c.c., and 1,100 c.c. solo machines—the first seven finishers in the handicap classes being eligible to compete for the "Harry Smith" Gold Challenge Cup—and also handicap races for single and twin cylinder sidecar machines.

Sun-Vitesse Lightweights in the T.T.

Eighth position for *The Motor Cycle* Cup in the Junior T.T. race was gained by B. H. Norris on a 2½ h.p. Sun-Vitesse, the two Sun-Vitesse machines thus finishing together. We make this statement because our original report in the issue of June 16th credited G. N. Morris, on an Ivy, with this position, and at least two other papers have already copied the error!

Ealing Club at Brooklands.

On the 16th prox. the Ealing and District M.C.C. will hold a race meeting at Brooklands, with a cup presented by Mr. Duncan Watson as the chief award.

Strenuous Work in the Junior T.T.

R. Weatherell, rider and manufacturer of the R.W. Scout lightweight in the T.T., informs us that the tank upon which he had to perform extensive soldering operations twice in the course of the race was a Manx production hurriedly substituted for the original article which was damaged in practice. Otherwise his machine ran perfectly, completing four laps, one in 53m.

Judging T.T. Speeds.

Six hundred entries were received by Messrs. S. A. Newman, Ltd., for their competition to estimate the best time by an Ivy rider in the T.T. The three prizes were awarded as follows: Messrs. Blakes' £5 prize.—Mr. J. McGill, 203, Carlton Road, Worksop. Messrs. Frank Whitworth's £5 prize.—Mr. E. E. Pritchard, Claremont Cottage, Brownhills, Walsall. Messrs. Maude's Motor Mart's £5 prize.—Mr. W. Thomas, 9, Belmont Road, Ilford.

N. WESTERN CENTRE (A.C.U.) TEAM TRIAL.
Having survived the watersplash, A. Walsh (4 Douglas sc.) succumbs to gradient owing to a slipping belt.

Near Princes Risboro'—Eric Williams (7 A.J.S.) at the head of a string of competitors. His nonchalant riding position is in startling contrast to his very familiar T.T. racing attitude.

The M.C.C. Inter-team Trial results in Success for the Sheffield and Hallamshire M.C.C.

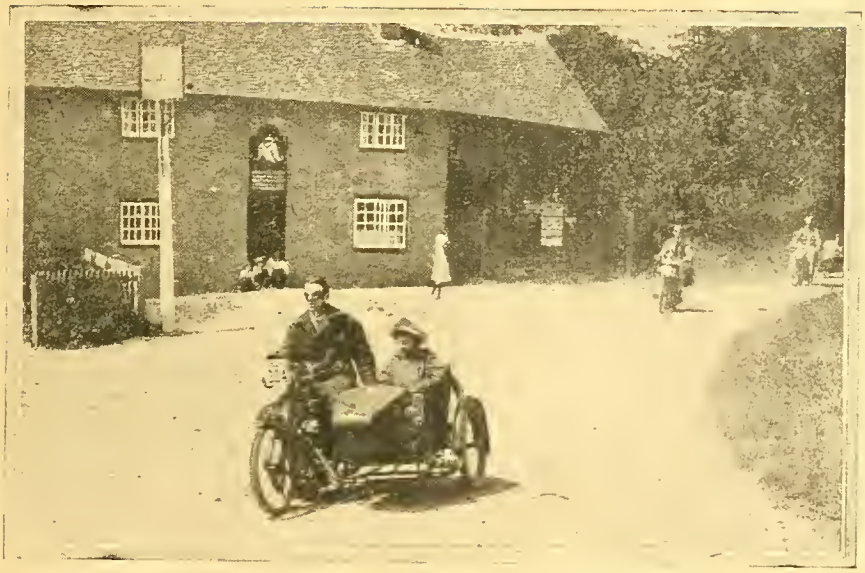
AS usual, brilliantly hot weather favoured the M.C.C. Inter-team Trial for *The Motor Cycle* Challenge Trophy last Saturday. The contest was inaugurated in 1904 with the idea of fostering and encouraging the formation of motor cycle clubs and of promoting a friendly rivalry between them. This year twenty-eight clubs entered, of which only one, the Nottingham and District M.C.C., did not put in an appearance. Owing to numerous last-minute changes of riders and their mounts, the corrected programme was full of alterations, but the winning team—the Sheffield and Hallamshire M.C.C. — started as originally chosen.

Keeping Cool!

This year it was decided to run the trial over the same course as that employed in 1919 and 1920, but in the reverse direction—a suggestion which first emanated from *The Motor Cycle*, and one which worked excellently in practice. The teams were started from the same conveniently placed lane leading into the London-Aylesbury main road. So hot was the weather that the Ilkley team rode in plaited straw sun bonnets, which rendered it hard to distinguish the sex of the sidecar passengers from a distance; while G. D. Hardie (of the Woolwich, Plumstead, and District M.C.) and his companion made the three tours of the course in their shirt sleeves.

The course was 33½ miles long and had to be covered three times at a speed between 17 and 20 m.p.h.; the club whose team finished complete, and whose second and third lap times most closely approximated its first lap times, was adjudged to be the winner of the trophy.

Now as regards the course, the first hill of note was that situated within a quarter of a mile of the start and leading up to Wiggington, which accounted for more than one failure in the first lap. J. Avery (Harley sc.), Oxford Club, failed, and W. Tolley (4 Triumph) had his gear lever jump out of engagement, whilst Choldcroft (A.J.S. sc.), Worcester, could not disengage his top gear at the psychological moment, and the observers ruled that his mount temporarily came to a standstill, although Choldcroft did not admit this, and carried on. S. Hellen (Norton), Basingstoke M.C., stopped owing to lubrication trouble two miles from the start.



A member of the winning Sheffield team, S. Sawer (4 Norton sc.), going well on Wiggington Hill.

After this there were no difficulties for another mile or two, although the road surface was very loose owing to the drought, and the dust was appalling. It was not, however, till half-way round the course that anything interesting was encountered; but a few miles from the sharp turning outside Missenden, the course (excellently arrowed by the way) went suddenly off to the left and ascended a long easy hill through invitingly shady beechwoods. Next came the descent of Pink Hill and the climbing of Kop, probably the most trying hill on the course. There were a good many spectators here.

Performances on Kop.

The hill accounted for several failures in the first lap, but none in the other two. H. V. Davidson (Morgan), North-West London M.C.C., came to a standstill owing to wheel spin. E. P. Higgs (8 New Imperial sc.), City and Guilds Club, failed, and C. M. Hyams (2¼ Velocette), of the same club, met a similar fate. There was a good deal of passing on the hill, which, though awkward for the solo mounts, was skilfully carried out.

Leaving Kop, the competitors descended Whiteleaf Hill, and followed the main Wendover Road for a spell. Then ensued a long steep hill after Chequers (the Prime Minister's country seat), a brief run through woods and over a rough surface, and then a sharp ascent up Dinah's Hill, probably the steepest on the course, but too short to be dangerous. There was only one failure here during the first lap, this being

An Ariel rider, W. Nash, passing the quaint old White Swan in the village of Gt. Missenden.

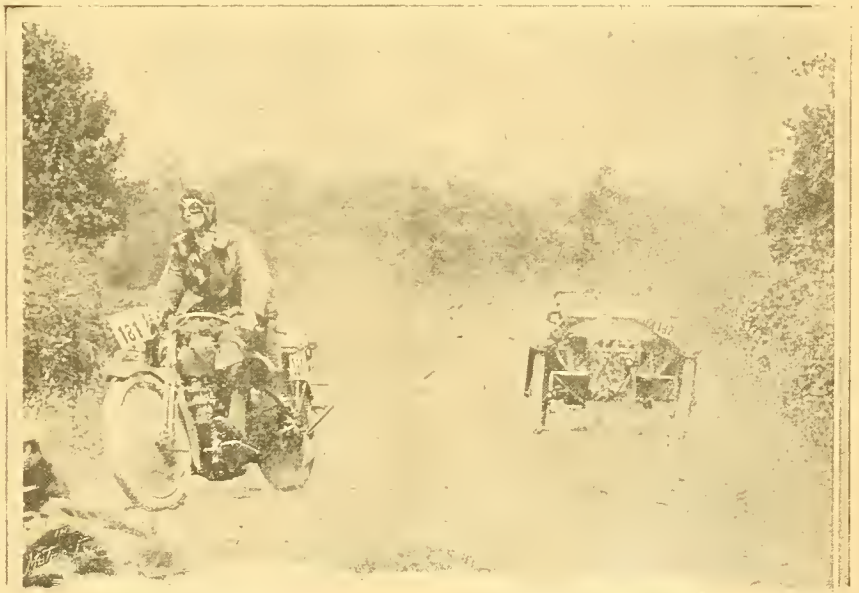
Bourne (Matchless sc.), of the unfortunate City and Guilds Club. Pigott (Norton sc.) was baulked by a cart at this point, but did not stop. D. S. Parsons (Matchless sc.), Essex Club, threw down his number cards before the observer, as he passed him as a signal that he had stopped. About a mile from this point, Watson-Bourne punctured his tyre with so sharp a stone that it cut the brass tyre valve clean across.

Of the twenty-seven clubs from all over the country which started, only twelve had complete teams at the end of the first round, which fact conveys some idea of the severity of the course and the number of tyre troubles experienced. These clubs were: Surbiton, M.C.C., Sheffield, Worcester, Brighton, Bucks, Coventry, Birmingham University, North London, Norfolk, Camberley, and Luton.

The second and third laps took a heavy toll of tyre troubles, and at our vantage point at this stage, on one of the steepest hills, Bridgman (Indian sc.), M.C.C., J. Chater-Lea, jun. (Chater-Lea sc.), Brighton M.C.C., and Wheeler (New Imperial sc.), Norfolk, passed with flat tyres.

Tyre Troubles Galore.

The first team to arrive in its entirety was the Worcester and District M.C.C., but Newman's A.J.S. sc. was running on the rim, and continued for thirty-seven miles. Such a procedure is always dangerous, and eventually the wheel completely broke up just short of the finish, tyre and rim being severed. It was a very plucky attempt to finish with a clean score. The next complete team to pass was the Sheffield Club riding in close formation and with wonderful consistency, and this on a gradient of about 1 in 6. The Norfolk team was the third complete team to pass, and we then knew that one of these three would carry off the trophy. Newman's fate was still unknown, and, despite Wheeler's sidecar tyre, it was thought that the Norfolk men had a sporting chance, but it eventually transpired that the front wheel of Daniel's Norton had punctured five miles from the finish.



It was indeed hard luck that several of the crack teams were out of the running, among which may be mentioned the so often victorious Coventry Club, one of whose men, Brandish (Rover), finished practically the whole of the second round on a flat back tyre to assist the score, though he failed to average the requisite 17 m.p.h. minimum, and the M.C.C., who lost Watson (Ariel sc.) by reason of a broken frame. Bridgman's performance was very plucky. His sidecar tyre punctured in the second lap, but he carried on undaunted, and one by one heard the spokes of the wheel "ping" as they gave way due to the strain. Nevertheless, his Indian finished non-stop—although the broken spokes by then resembled a Catherine wheel!

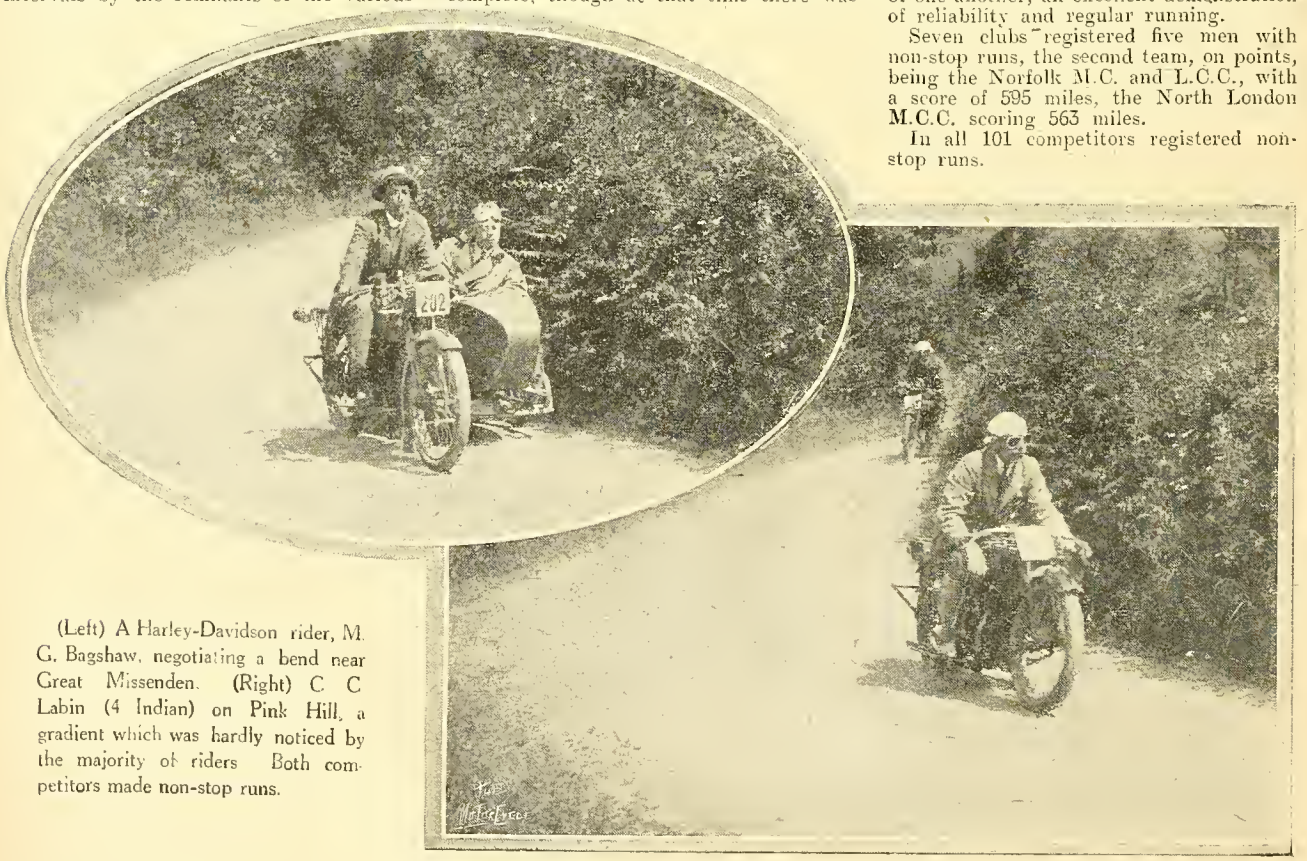
Only Three Non-stop Teams Left.

By the end of the second lap the twelve clubs with complete teams had been reduced to three, which small percentage suggested that no complete team might survive. The three clubs in question were the Worcester and District M.C.C. (later disputed by a marshal who reported one rider as having stopped momentarily), the Sheffield and Hallamshire M.C.C., and the Norfolk M.C.

Actually the two last named clubs have been among the most consistent supporters of the M.C.C. team championship, so that their prospects of ultimate success proved very popular. It is a strange fact, but it is seldom that any new club competes and carries off the trophy at the first time of asking, for there are many little but important points requiring scrupulous care to ensure a complete team non-stopping on the crucial day. All this is learned only by bitter experience.

The Ilkley boys are a tough lot. One of them, W. R. Haggas, left his home near Ilkley for Tring on Saturday morning at five o'clock, accomplished a non-stop run on his Triumph, and set off again for Yorkshire after the contest. Four of them made non-stops. Longfield overshooting a corner on the first circuit, and just failing to recover himself. After Watson-Bourne punctured, Willis, of the Sutton Club, had turned over, and Roberts, his companion, stopped with plug trouble, the other members of the team, except Mundy (Humber), elected to withdraw, their reason being "for refreshment"—it was still scorchingly hot. One can sympathise with the officials at the starting point over their long vigil, for there was no shade,

Branching off at the fork roads near Chesham. H. Masser (Harley-Davidson) and A. G. Mansell (Morgan), both of the City and Guilds Engineering College M.C.C. The former made a non-stop run.



A bunch of competitors on Kop Hill. As can be judged by the photograph the dust was well stirred up, and this with the great heat made it none too comfortable for competitors and officials

and the perspiration rolled down the faces of the timekeepers, Messrs. Bidlake and Walker, who were assisted by Messrs. W. H. Wells, Ogilvie; Head, and Cooper.

By the time the leaders were due to finish, a goodly crowd had collected. The first man home non-stop was Pymm (Raleigh), Leicester Club, followed at intervals by the remnants of the various competing teams. Many of these had to struggle home. For instance, Axford (A.J.S. sc.) had the bad luck to puncture his front tyre, but kept going; and Bladder, of the Worcester Club, was on a flat driving tyre. To the Sheffield and Hallamshire Motor Cycle Club fell the honour of getting the only team home complete, though at that time there was a chance for the Norfolk team, which started later, to qualify. When their time came, however, it was observed that R. A. Daniels (Norton) was missing. He had stopped five miles short of the finish, so that the Sheffield team were left indisputable winners, the team finishing well to time, and almost within a stone's throw of one another, an excellent demonstration of reliability and regular running.

Seven clubs registered five men with non-stop runs, the second team, on points, being the Norfolk M.C. and L.C.C., with a score of 595 miles, the North London M.C.C. scoring 563 miles.

In all 101 competitors registered non-stop runs.

(Left) A Harley-Davidson rider, M. G. Bagshaw, negotiating a bend near Great Missenden. (Right) C. C. Labin (4 Indian) on Pink Hill, a gradient which was hardly noticed by the majority of riders. Both competitors made non-stop runs.

WINNERS OF THE CUP.

The Sheffield and Hallamshire M.C. and L.C.C. team, all of whom recorded non-stop runs. The riders were E. A. Wheatley (Triumph), D. H. Kaye (Triumph), E. Searle (Triumph), J. H. Stacey (3 Matchless sc.), S. Sawer (4 Norton sc.), and F. W. James (10 Morgan).

The following are the leading clubs in their order of merit :

CLUB CHAMPIONS OF 1921.

1ST.—SHEFFIELD AND HALLAMSHIRE M.C.C.

		Time error. m. s.
E. A. Wheatley (4 Triumph)	non-stop ...	2 47
S. Sawer (4 Norton sc.) ...	,, ...	9

The Runners Up.

4TH. BUCKS COUNTY M.C.C. .. .. 541 MILES.
W. G. Harding (4 Triumph), C. F. Mitchell (7 A.J.S. sc.), J. K. Flemons (7 Harley-Davidson sc.), P. Manley (4 Triumph), and R. Newitt (7 Harley-Davidson sc.).

5TH. BRIGHTON AND HOVE M.C.C. .. 537 MILES.
H. K. Knight (3½ Norton), S. Dunford (7 Harley sc.), A. B. Friend (3½ Sunbeam), W. H. Sheraton (3½ Norton), and J. Chater Lea (8 Chater-Lea sc.).

6TH. COVENTRY AND WARWICKSHIRE M.C. 533½ MILES.
R. R. Grindlay (4½ Humber), S. Wright (4½ Humber sc.), F. G. Edmond (4 Triumph), L. Crisp (4½ Humber), and H. Finch (4 Triumph sc.).

7TH. HERTS. COUNTY M.C. AND L.C.C. 521 MILES.
H. Wright (8 Matchless sc.), J. Shepherd (4½ Humber), E. de J. Birch (8 Matchless sc.), C. S. Bourne (4 Triumph), and S. Hall (8 Morgan).

8TH. BROOKDALE CLUB (CATFORD). 507 MILES.
P. J. Sims (4 Triumph), H. Philbrick (4 Triumph), J. Holt (3¾ Scott), J. J. Leonard (8 Bat sc.), and H. Leng (3 A.B.C.).

9TH. WORCESTER M.C.C. .. .. 500 MILES.
B. Bladder (8 New Imperial sc.), B. Kershaw (2¾ New Imperial), E. Williams (7 A.J.S.), A. Chadwick (2¾ Wilkio), and E. Choldcroft (6 A.J.S. sc.).

Other Non-stop Riders.

LUTON AND SOUTH BEDS A.C.—S. Brown (4 Triumph), A. Saddington (6 James sc.), H. Reyre (6 James sc.), and F. Child (8 Morgan).

ILKLEY AND DIS. M.C.C.—W. R. Haggas (4 Triumph), J. S. Duxbury (3¾ Scott), R. Naylor (3½ Sunbeam), and H. W. Sellers (3½ Sunbeam sc.).

MOTOR CYCLING GIPSY CLUB.—S. R. Axford (7 A.J.S.), A. G. Fenn (5 Raleigh), E. M. Oliver (7 A.J.S. sc.), and G. E. Cuffe (Metro-Tyler).

BANBURY AND DIS. M.C.—H. G. Askew (Rover), M. Pearson (3½ Norton), M. Bennett, 4 Blackburne), and F. Askew (8 Morgan).

LEICESTER AND DIS. M.C.C.—R. Harris (4 Norton sc.), W. C. Pymm (5 Raleigh), J. Brown (8 Matchless sc.), and W. Chapman (8 A.J.S. sc.).

SURBITON AND DIS. M.C.C.—R. C. Staunton (4 Triumph), R. A. Green (3½ Norton), D. H. Davidson (7 Harley-Davidson sc.), and R. Preston (3½ Sunbeam).

MOTOR CYCLING CLUB.—P. W. Moffatt (3½ Douglas), E. A. Bridgman (7 Indian sc.), W. B. Gibb (3½ Douglas), and G. Nott (7 Matchless sc.).

BIRMINGHAM UNIVERSITY M.C.C.—T. McKenzie (3 A.B.C.), H. H. Watling (3 A.B.C.), and E. Poppe (6 Rover sc.).

ESSEX COUNTY M.C.—F. A. Applebee (4 Iodian), C. Day (3½ Sunbeam), W. C. Hemy (7 A.J.S. sc.), and S. M. Greening (7 Indian sc.).

OXFORD M.C.—R. J. Pigott (4 Norton sc.), A. D. Cruickshank (3½ Norton), L. Avery (7 Harley-Davidson sc.), and L. A. Welch (4¼ B.S.A.).

EALING AND DIS. M.C.C.—C. F. Temple (4 Harley-Davidson), W. G. Boyer (3½ Norton), and S. E. Longman (7 Harley-Davidson sc.).

WOOLWICH, PLUMSTEAD, AND DIS. M.C.—T. J. Ross (7 Matchless sc.), F. O'Brien (7 Matchless sc.), and G. D. Hardee (7 Matchless sc.).

CITY AND GUILD ENGINEERING COLLEGE M.C.C. —H. Masser (7-9 Harley-Davidson sc.) and W. Clynes (3 A.B.C.).

ROCHESTER, CHATHAM, AND DIS. M.C. AND L.C.C.—S. White (2½ Levis), G. Packman (8 Matchless sc.), and G. Maund (3 A.B.C.).

CAMBERLEY M.C.C.—A. Love (3½ Norton) and E. J. Over (3½ Sunbeam sc.).

BASINGSTOKE M.C.C.—R. Clark (7 Harley-Davidson).

SUTTON COLDFIELD AND N. BIRMINGHAM A.C. —R. G. Mundy (4½ Humber sc.).

THE CLUB CHAMPIONS OF 1921.

NEEDLESS to say the Sheffield and Hallamshire Club team which won *The Motor Cycle* Fifty Guinea Trophy last Saturday were highly elated with their success. Careful preparation beforehand won them the honour. The Club Committee selected the team, and appointing that seasoned rider, S. Sawer, as captain, all the men took great pains to ensure absence of trouble on "the" day. Their headquarters were at Aylesbury, and the team converged on that point on Friday evening. This year is not the first occasion that the club has won, for the coveted cup fell to the Sheffield Club in 1913, when no fewer than forty-one clubs competed for the honour. All except one machine had all chain drive this year, and a start was made on brand new tyres. Stacey's Matchless was only collected from the Woolwich works on Friday, but on the other hand Sawer's Norton registered its third successive non-stop run in the team trials. All the machines were in excellent condition at the finish. On the way to Tring, the team suffered four punctures between them, but Sunday's trip home was far more enjoyable, for the men were in high spirits and felt that their long trip of 170 miles on all British machines had not been in vain.

TROPHIES PRESENTED BY MR. P. J. EVANS FOR FASTEST LAPS IN THE T.T. RACES.

The recipients are H. R. Davies (A.J.S., 55.15 m.p.h.) and F. G. Edmond (Triumph 56.4 m.p.h.)

A LANCASHIRE TEAM TRIAL.

North-Western Centre A.C.U. find a Stiff Course. Four Survivors of 68 Starters.

CHIPPING is a tiny village in Lancashire, some twelve miles north of Preston. It is the hub of the motor cycle world, according to the inhabitants, for, not only did it provide that now famous "dark horse," Whalley, the T.T. man, but last week-end it provided the rallying point for a well-supported trial.

The North-western Centre A.C.U. held a most successful trial, largely in the same district, about a year ago; but on this occasion a team trial was decided upon, each team of four (two solos and two passenger) having to complete three circuits of a thirty-five mile course.

A Late Start.

Unfortunately, a number of competitors missed the starting point, owing to the non-arrival of an official, and, in consequence, the event started an hour late.

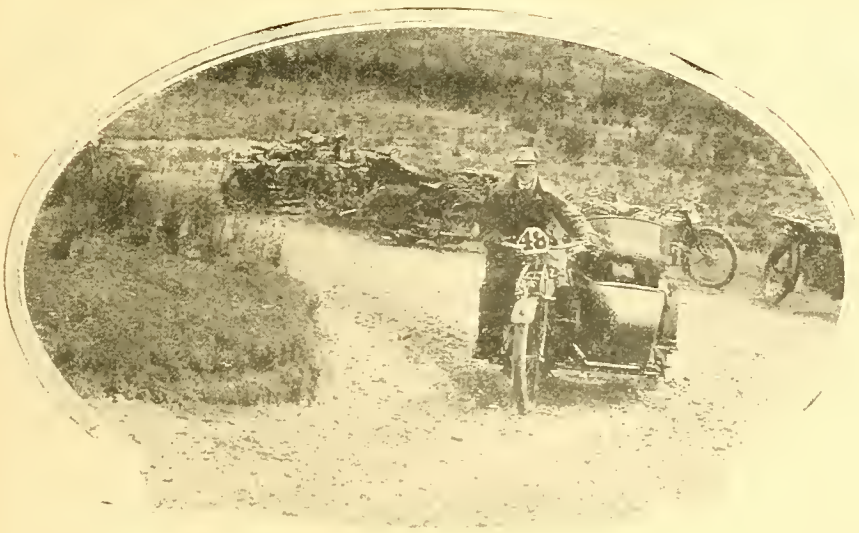
Meanwhile, at the request of another official, the locals had dammed up the first observed watersplash, so that it would come up to the hubs of the machines. Other marshals, arriving to view this handiwork, promptly allowed most of the water to escape, thus rendering the competitors' task a shade more hopeful.

From Chipping the roads were bad at the outset, and, although there were no hills with gradients of the "unclimbable" order, yet it was only with difficulty that "footing" could be avoided in a number of places. The tit-bit of the course, however, was the first watersplash at Hawthornthwaite Fell.

G. Tuckett (4 Triumph) and A. Nuttall (3½ Dalton) in the watersplash which accounted for the bulk of the failures in the North-Western Centre Team Trial for the Blake trophy.

Owing to the depth of the water, almost half the entry failed, and many who successfully negotiated the stream immediately fell victims to the severe gradient which followed immediately afterwards.

Two Triumph riders, W. H. Lathom and W. Ratcliffe, were the first arrivals, and the contrast of their methods was typical of the entire field. The former came through steadily, and had no misfortune, but the latter charged the water in a rush, and stopped.



Particularly good riding was exhibited by O. Entwistle (3½ Sunbeam), H. Walsh (2¾ A.J.S.), P. Crompton (3½ Triumph), O. E. Carter (4 A.B.C. sc.), and O. Wade (6 A.J.S. sc.). T. Cheetham came through the splash well, but found the power of his Scott inadequate to haul sidecar and passenger up the ensuing gradient, while H. Gibson (8 Royal Ruby sc.), after crossing the stream and making a star climb, suffered a damaged gear, and was later compelled to retire.

Another Water-splash.

A mile and a half further on a very innocuous splash was observed also, but the checkers were having a slow time, for there were no failures to record. The route then led through the wild scenery of the Trough of Bowland into Yorkshire, the descent of the pass being very loose. Several miles of winding lanes followed through Chipping, down a narrow stony lane of precipitous gradient, and so to the starting point for the second circuit. Of the sixty-eight starters, however, only twenty-five completed the first lap, and the second circuit weeded out another ten. Therefore, but fifteen essayed the final circuit, and only four returned, thus bringing an exceptionally strenuous afternoon to an end.

According to viewpoint! The driver, A. J. Bailey (4 Norton sc.), actively overcoming a difficulty, looks cheerful, but the helpless passenger appears to be taking things to heart.

Immediately after negotiating the swollen watersplash, the competitors found themselves confronted with this rough hairpin approach to a severe gradient. The machine is a Royal Ruby.

The following members of their respective teams completed more than one lap:

BURY AND DISTRICT M.C. (No. 3 Team).—O. Entwistle (3½ Sunbeam), 3 laps; P. Crompton (4 Triumph), 2 laps; C. Guthrie (7 A.J.S. sc.), 3 laps; and H. Compton (3½ Sunbeam), 2 laps.

EAST LANCS. M.C. (No. 2 Team).—W. H. Lathom (5½ Triumph), 3 laps; and G. Tuckett (4 Triumph), 2 laps.

LIVERPOOL M.C. (No. 1 Team).—J. Fox (4 Norton), 2 laps; and J. H. Green (8 Excelsior sc.), 2 laps.

MANCHESTER M.C. (No. 2 Team).—H. Scholes (4 Triumph), 2 laps; E. Foster (8 Dot sc.), 2 laps.

MANCHESTER M.C. (No. 1 Team).—O. E. Carter 4 A.B.C. sc.), 3 laps.

WARRINGTON M.C. (No. 2 Team).—W. N. Pearn (3½ Norton), 1 lap; and J. Roberts (6 A.J.S. sc.), 2 laps.

OLDHAM AND DISTRICT M.C. (No. 1 Team).—H. Jacques (7-9 Harley-Davidson sc.), 2 laps; and J. H. Taylor (7-9 Harley-Davidson sc.), 1 lap.

EAST LANCS. M.C. (No. 1 Team).—H. Walsh (2¾ A.J.S.), 2 laps; and J. H. Whittaker (3½ Sunbeam), 1 lap.

BLACKPOOL AND FYLDE M.C. (No. 2 Team).—J. Riley (4 Triumph), 2 laps.

BURY AND DISTRICT M.C. (No. 1 Team).—F. Holland (3½ Sunbeam), 1 lap; and W. Lord (3½ Sunbeam sc.), 1 lap.

BURY AND DISTRICT M.C. (No. 2 Team).—J. Pilling (3 A.B.C.), 1 lap; and A. Coyal (6 B.S.A. sc.), 1 lap.

LIVERPOOL M.C. (No. 2 Team).—O. Wade (6 A.J.S. sc.), 1 lap; and H. A. Harben (7 Indian sc.), 1 lap.

WARRINGTON M.C. (No. 3 Team).—A. J. Bailey (4 Norton sc.), 1 lap.

The following teams were entirely eliminated:

Warrington M.C. (No. 1 Team), Liverpool M.C. (No. 3 Team), and Blackpool and Fylde M.C. (Nos. 1 and 3 Teams).

The lower slopes of the western side of the Trough of Bowland. H. Jacques (7-9 Harley-Davidson sc.) is commencing the ascent.

CLUB NEWS. (Continued from page 827.)

West Birmingham M.C.C.

At a committee meeting held on Friday it was decided to substitute a social run to the Sutton Coldfield hill-climb at Penkridge Bank instead of holding the club hill-climb on July 2nd.

Falmouth M.C. and L.C.C.

Sixteen competitors started in the reliability trial on the 22nd inst., and only three failed to finish. Results :

1, W. Pascoe (2½ Bown-Villiers); 2, E. Hamer Hunt (8 Matchless sc.); 3, W. Brimacombe (4 Triumph); 4, L. Woodland (3½ P. and M.).

Herts. M.C. and L.C.C.

A highly successful hill-climb was held on Carbon Hill, Newgate Street, on Thursday evening, the 23rd inst., in which twenty-eight machines competed before a large number of spectators. Fastest time of the evening was made by H. H. Saddington (5-6 James), winning a gold medal Results :

SOLO (350 c.c.).—1, H. Reyne (2½ Reyne-Newson); 2, T. D. Bowden (2¾ Wooler); 3, J. C. Slimmer (2¾ Douglas).

SOLO (600 c.c.).—1, E. F. Harveyson (4 Indian Scout); 2, H. Reyne (2½ Reyne-Newson); 3, G. L. Giddings (4 Triumph).

SOLO (Unlimited).—1, H. H. Saddington (5-6 James); 2, E. F. Harveyson (4 Indian Scout); 3, C. R. Catesby (3¼ Norton).

PASSENGER MACHINES.—1, H. H. Saddington (5-6 James sc.); 2, S. Hall (8-10 Morgan); 3, A. A. Pollard (11.9 A.C.).

Bradford M.C. and L.C.C.

Gorgeous weather prevailed at the freak hill-climb on Saturday last, and a very big crowd assembled to see the sport, and contributed generously to the collection for St. Dunstan's Hostel. Each competitor was allowed two climbs, the best performance for consistency being C. B. Haigh (3½ Scott-Squirrel), who obtained 157 and 158 marks out of a possible 160 each climb. The winner scored 152 and 159 marks. Results :

1, Wilson cup and gold medal, W. Clough (3¾ Scott); 2, silver medal, C. B. Haigh (3½ Scott Squirrel).

SIDECAR CLASS.—Gold medal, R. A. Bonner (4 Douglas sc.)

Mr. Wilson, the donor of the cup, decided that C. B. Haigh should have a gold medal for his brilliant consistency of climbing.

Leeds University M.C. and Sheffield University M.C.C.

On Saturday, June 18th, inter-'Varsity speed trials were held between Leeds and Sheffield Universities at Leeds over a flying quarter-mile. Owing to a series of unfortunate accidents, Leeds was only represented by five men. Results :

350 c.c. SOLO.—1, — Adcock (2¾ Douglas), Sheffield, 16⅗s. (54 m.p.h.); 2, C. P. Porrit (2¾ Douglas), Leeds, 17s. (53 m.p.h.); 3, — Shepherd (2¾ Beaumont), Sheffield, 17⅗s. (52 m.p.h.).

550 c.c. SOLO.—1, H. Kendall (3½ Norton), Sheffield, 13⅗s. (67 m.p.h.); 2, — Hudson (3½ Norton), Sheffield, 14s. (64 m.p.h.); 3, G. E. Suddards (3½ Rudge), Leeds, 16s. (56 m.p.h.).

750 c.c. SOLO.—1, — Hudson (3½ Norton), Sheffield, 14⅗s. (63 m.p.h.); 2, H. Kendall (3½ Norton), Sheffield, 14⅗s. (62 m.p.h.); 3, G. E. Suddards (3½ Rudge), Leeds, and Malcolm Brown (3 A.B.C.), Sheffield, 15⅗s. (59 m.p.h.).

1,000 c.c. SOLO.—1, H. Kendall (3½ Norton), Sheffield, 13⅗s. (67 m.p.h.); 2, — Hudson (3½ Norton), Sheffield, 14⅗s. (62 m.p.h.); 3, Malcolm Brown (3 A.B.C.), Sheffield, 15s. (60 m.p.h.).

1,000 c.c. SIDECARS.—1, G. G. Hardy (8 Zenith sc.), Leeds, 16⅗s. (54 m.p.h.); 2, — Shepherd (8 Excelsior sc.), Sheffield, 17s. (53 m.p.h.).

Sheffield won by thirty-five points to ten. The fastest time of the day was made by H. Kendall (3½ Norton) at 67 m.p.h.

POSTAL REGULATIONS.

Owing to the recent decision of the Postal Authorities to discontinue Sunday collections, matter relating to club events should be posted to the Editor on Saturday evening, or from Post Offices and Railway Stations where late fee letters are accepted on Sundays.

Coventry Triangle M.C.

Owing to the large number of entrants (168 in all), four events in the gymkhana on the 19th inst. had to be held over until last Saturday. Results of both days' contests follow :

SLOW RACE (Solo).—1, A. Close (3½ Sunbeam); 2, M. Baron (4¼ B.S.A.).

HANDKERCHIEF GATHERING RACE.—1, Mrs. Perkins (4¼ B.S.A.); 2, M. Prosser (4 Douglas).

OBSTACLE RACE (Solo).—1, A. Webster (2¾ Douglas); 2, H. Baron (4¼ B.S.A.).

OBSTACLE RACE (Sidecar).—1, J. Healey (4 Triumph sc.); 2, J. Yardley (3¼ Humber sc.).

LADIES' DRIVING CONTEST.—1, Miss Warren (2¾ Levis); 2, Mrs. Vice (4 Triumph).

BEST HOME-MADE FITMENT.—Martin (combined tube carrier and pillion seat).

PLUG REMOVING RACE (Solo).—A. Webster (2¾ Douglas).

PLUG REMOVING RACE (Sidecar).—W. Brown (4½ Humber sc.).

MUSICAL CHAIRS.—1, Mrs. Vice (4 Triumph); 2, —. Crooke (3½ Triumph).

BUN EATING CONTEST.—1, W. Brown (4½ Humber sc.); 2, S. Healey (4 Triumph sc.).

Bristol M.C.C.

An interesting half-day trial was held on Saturday, interesting because, not considering one ascent sufficiently strenuous, the organisers terminated the trial with two climbs of the famous hill of Porlock. It amounted, in fact, to a speed-judging competition uphill.

Some thirty starters left headquarters at Bristol on a straight-away 20 m.p.h. run without intermediate checks to the foot of the hill. There were only three failures, but solo riders found it no mean task to ride slowly round Porlock's corners, steering with one hand, watch in the other.

The result, as follows, was announced after tea at the Ship Inn :

1, H. C. Walters (7-9 Harley-Davidson sc.), no error, dead on time, case of Speedwell oil, presented by British Oil and Turpentine Co., Ltd.; 2, Eli Clark, jun. (3½ Beardmore-Precision), ⅗s. error, Tan-Sad; Eli Clark, sen. (6 Douglas sc.) and H. J. Hobbs (3½ Blackburne sc.) tied for third place, and twelve others qualified for silver medals.

Eastbourne and District M.C.C.

Results have now been announced of the trial held on the 19th inst., and are as follows :

BLAKEMARSH CUP.—A. Goldsmith (7-9 Harley-Davidson sc.).

DOULL CUP.—W. Hylands (New Hudson).

GOLD MEDALS.—Class 1, W. Hylands (New Hudson); Class 2, F. E. Stacey (2¾ Verus sc.); 3, J. Swindleburst (3½ Lea-Francis); 4, A. Goldsmith (7-9 Harley-Davidson sc.).

Brighton and Hove M.C.C.

The club held its annual trial for the Dobson Trophy on June 19th. The course was a severe one of 113 miles, starting from Brighton. Cob Hill, Ardingly, was taken on the way out, but presented no difficulty to any competitor. The results have now been confirmed, and are as follows :

SIDECARS.—1 and trophy, L. G. Watts (4 Triumph sc.), 295 points; 2, S. Dunford (7-9 Harley sc.), 290 points.

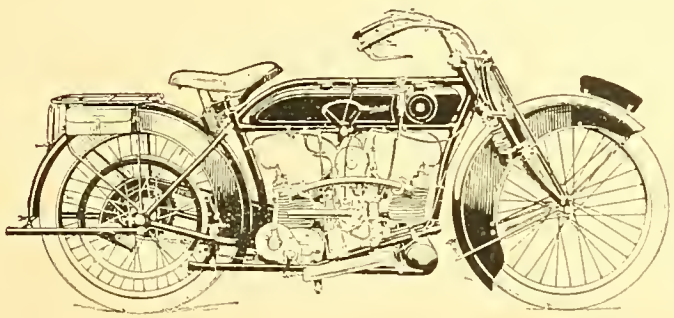
SOLOS.—1, H. Kircher Knight (3½ Norton), 293 points; 2, C. Farley (4¼ B.S.A.), 291 points; 3, A. N. A. Hewett (3½ Sunbeam), 288 points.

SATURDAY'S OPEN TRIAL AT BOURNEMOUTH.

THERE are several interesting machines and well-known riders in the entry list of seventy-three for the Bournemouth and District M.C. and L.C.C. open trial on Saturday. The Jupp runabout will make its first appearance in an open trial. There are four team entries, viz., Worcester and District M.C. and L.C.C., Bournemouth and District M.C. and L.C.C., Mr. J. H. Jones (a Triumph team), and Messrs. Martinsyde.

As already mentioned in *The Motor Cycle*, there will be no observed hills, and several novel tests have been introduced to put the trial on a competitive basis. These include a timed hill-climb and speed test (taken *en route*).

The first man starts from Bournemouth at 9.55 a.m., and from the lunch stop at Blandford at 2.51 p.m.



Porlock was climbed twice during the Bristol M.C.C. Trial on Saturday. Competitors at the foot of the hill

Humber

The Motor Cycle as Schoolmaster

"The Motor Cycle," says *The Daily Mail*, "is the Schoolmaster to teach the English what a lovely land is theirs." To many, "it is the gate of escape from the grime of the towns into the sweetness of the countryside, and the number of those who use it steadily grows." The Humber 4½ h.p. Flat Twin-cylinder Motor Cycle has won many conspicuous successes, and has been described in motor cycling quarters as "Coventry's finest production."

Prof. A. M. LOW, A.C.G.I. praises the "JOHN BULL" Belt

It was with considerable pleasure that we received from Prof. A. M. Low permission to publish the following letter. The name of Prof. Low is known to every Motor Cyclist as that of a man whose researches are of the utmost importance to the sport.

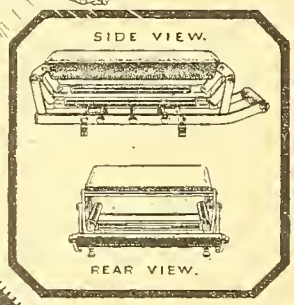
"I thank you for your letter, and am much obliged to you for the "belt duly received.

"It might interest you to know that I have frequently employed "your John Bull Belts on experimental machines, often fitted with "engines of horse-power out of all proportion to the size of belting "available. Not only have I had good results from the point of "view of reliability, but transmission efficiency tests have shown the "overall loss to be remarkably small."

Such praise, from such a man, carries remarkable weight.

In the 1921 T.T. Junior, 24 of the 38 finishers, including the Winner, were "John Bull" equipped—in the Senior, 19 out of 25. As in 1914 and 1920—so in 1921.

THE LEICESTER RUBBER CO., LTD. — LEICESTER

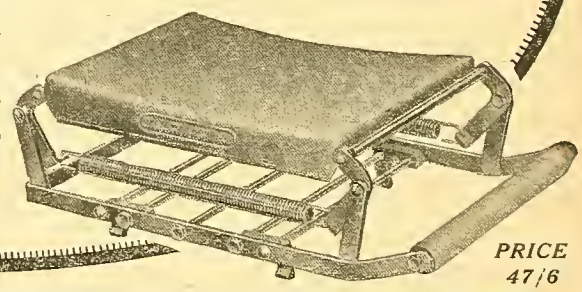


Introducing The

Townshend

PILLION SEAT.

(PATENTED)



THIS is the Seat you need.

It completely solves the problem of perfect Pillion riding. Scientifically designed to assure maximum comfort and safety, it has a substantially made frame of particularly handsome build and finish. No sharp corners or projecting metal edges. Well padded shaped Seat on stout metal base. Very strong, double-action Clip fastening. Fitted on any carrier in 3 minutes.

The spring action is through rocker arms at each corner on strong lateral springs, the whole seat moving vertically ONLY, hence—NO END OR SIDE SWAY, NO BOUNCING OR BUMPING is possible, and all danger of steering-wobble is eliminated. No moving parts to pinch the fingers. Handle at rear for passenger's assistance and for lifting machine on to Stand. Send for fuller particulars. Obtainable of all Dealers and Garages.

"I have since transformed the running of the machine."

—Extract from Mr. Palmer's letter in "The Motor Cycle" of May 26th. This correspondent has fitted to his Royal Enfield Combination the ingenious

L.M.C. PATENT SADDLE SUSPENSION

which is now available for other makes besides the one for which it was originally designed, the L.M.C.

THE COMFORT OF A SPRING-FRAME MOUNT

WITHOUT ITS DISADVANTAGES

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable & Co. to ILIFFE & SONS Ltd., and crossed. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, ½ %. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

The Burlington MOTOR CYCLE CO. LTD

Bertie bides awhile.

Down to the Sea by the BURLINGTON

Reconditioned

DOUGLAS

It was recently stated in a London Daily that the man of limited means could procure a reliable reconditioned Combination at £120 from a firm whom the writer knew to be honest.

We therefore draw "Motor Cycle" readers' attention to our reconditioned machines, which are guaranteed for 3 months at a price much below that quoted above

We have established amongst the motor cycling fraternity a reputation based on honest workmanship and value.

Therefore, you are safe in dealing with us.

KEMPSHALL

TYRES

SURVIVE

6 YEARS'

CONTINUOUS

USE

and still like Charlie's Aunt

24, Armthorpe Road,
Ranmoor,
Sheffield.
2nd May, 1921.

Sirs,

In 1915 I bought an 8 h.p. Chater-Lea, fitted with Kempshall Tyres. The tyres have been in continuous use for six years, and are not yet worn out. I think this is a wonderful record of service.

Yours faithfully,
(*Signed*)
W. H. Berisford

"Because I get *real* Satisfaction"

Ask any one of that ever increasing host of Colmore Customers *why* he comes again and again to us, and you will always get the above answer. And, without making any inflated claims, we say definitely that we can give *you* overwhelming satisfaction in every transaction you have with us—

Motor Cycles—

a wide and varied choice of really top-hole machines.

Repairs—

carried out conscientiously and well, and incidentally, very promptly.

Accessories—

a wide and comprehensive range of all those little "essentials" every Motor Cyclist wants.

Spare Parts—

a large stock of these for all machines—especially for Douglas, Triumph, Matchless, etc.

Attention to your every need—

We have an infinite capacity for taking pains, and for going out of our way to please a customer. There is nothing too much trouble, while courtesy and cheerfulness always surround you at the Colmore Depot.

NOW, can you wonder that people send to us from all parts of the country?

Colmore Depot,
31, Colmore Row,
BIRMINGHAM.

Branches also at Manchester, Liverpool and Leicester.

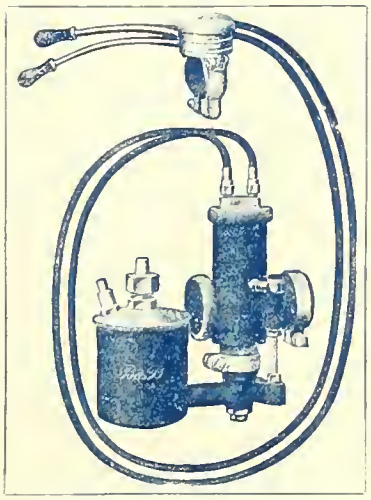
Minerva, £5; stamp reply.—Hawkins, 455, York Rd., Wandsworth. [1695



MAKE Your Own 2-stroke Lightweight.—Sets of castings and parts for 2-stroke engines, suitable for scooters, cycle attachments, or lightweight motor cycles. Castings in first-class quality cast iron, phosphor bronze, and aluminium, steel for shafts, all necessary nuts, bolts, and studs, together with blue prints giving all required dimensions. All these parts may be machined up to a small centre lathe, and are guaranteed to build up into a powerful and up-to-date engine. We guarantee all material, and will replace free of charge any faulty castings, etc.; price 57/6 (on rails Manchester). Cash with order. Prompt delivery. W. H. Taylor and Co., Ltd., Motor Engineers, Bury New Rd., Prestwich, nr. Manchester. [0633

Huile de Luxe

CALL IT "WHEEL DE LOOX"

If you have a sidecar machine, consider the economy of buying a 5-gallon drum of oil for your season's requirements—the saving is considerable.

We have ready an interesting, illustrated leaflet showing how you can pour oil from a drum without spilling a drop.

The current Lists give the prices of oils in drums. Please mention "The Motor Cycle"

WACKRILL

"Ixion" knows how to keep dry!

"Finally I bought a first-grade suit of grey Oilskins made by Barbours "of South Shields, and found I could ride my 200 miles of a trial, "stand in a steady downpour through two hill-climbs per diem, sit on "wet grass banks when my legs wearied, and get into the hotel at night "bone-dry; moreover, if the oilies were hung up over night in a wall- "less stable for the draughts to play around them, they were invariably "bone-dry long before the first competitor got away next morning."

"Ixion," in his Occasional Comments—"The Motor Cycle."

Money back in full if they go sticky, leak, or tail on any point.

Beacon Oilskins

DON'T GO STICKY OR LEAK.

The Beacon Motor Cycling Suit will keep you as dry as it does "Ixion," and will enable you to drive all day against wind-driven Rain and Sleet without letting you get wet or chilled.

Black double lightweight Jackets with Windcuffs, double fronts, and two roomy pockets, **27/6**, semi-buttoned Legging Overalls, **15/6**.

SUIT COMPLETE (post free) **43/-**

In Bronze Grey—Jackets **32/6** Semi-buttoned Legging Overalls, **18/-** Suit complete, post free, **50/6** with Seated Trouser Overalls in place of leggings, **55/-** and **63/6** the suit respectively.

fitted with a

LODGE

PLUG

¶ That engine fitments should be changed by competitors at the last moment, contrary to the makers' own selection, is opposed to the best interests of the sport.

There was no bonus distribution in the island of Lodge plugs.
